An interesting installation of an electric-light flasher for interior work is seen in the bar-room of the Brevoort Hotel, Chicago. Sign flashers have been in general use for quite a time for outdoor work, but the present installation is somewhat out of the ordinary. The bar-room of the hotel is small and the bar, which is in the form of an ellipse, occupies the center of the room. With the exception of a few lamps placed in niches in the walls, the entire illumination of the room comes from lamps in the ceiling or near the ceiling. On this account the feasibility of using a flasher is evident.

Two hundred and eighty-eight lamps are operated by the flasher, these being divided into four color groups of 72 each. The lamp-bulbs are red, green, yellow and white. These four colors are used alternately, each burning alone for a period of 24 seconds, and in unison with one other color during a period of six seconds. This last statement will be more clear when explained specifically. The red lamps being on and the green to follow, the latter will be thrown in circuit six seconds before the former go out. Is this way the room is always illuminated. Another feature of the present installation, which, by the way, contains only 16-candlepower lamps, is that the load carried at any time at which the circuit is to be broken is never more than six amperes, or in lamps, 12 16-candlepower lamps. This means that the 72 lamps in any one color are operated on six different circuits, so that the mechanism of any one circuit throws but 12 lamps in or out. In this way the switches which are of the ordinary knife type, last considerably longer, since they do not suffer from arcing.

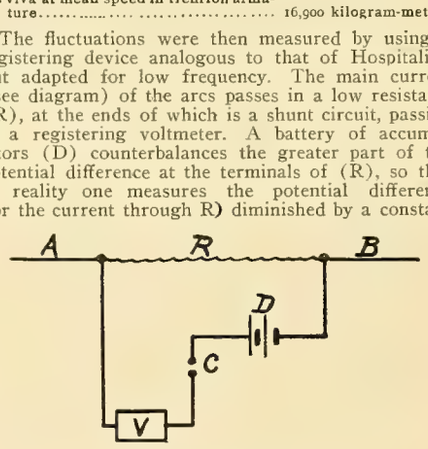
The mechanism is extremely simple and operates with an expenditure of but little power, the motor being such as is used for an ordinary 12-inch fan. No movable part enters into the electric circuit, excepting, of course, the knife-switch, which, when in service, is closed and held closed until the determined moment, when it is released and opens by means of a spring, which holds it open and at a sufficient distance from the jaws of the switch to insure safety from arcing and to prevent the possibility of "drawing" an arc on opening. Without any knowledge of electricity or electrical apparatus, one can change the flasher to obtain any combination he desires, providing that the load on any one circuit be never more than six lamps. The Brevoort Hotel apparatus was installed by the Reynolds Electric Flasher Manufacturing Company of Chicago.

Regulation of Gas Engines Used for Electric Driving.

At a recent meeting of the Société Internationale des Electriciens in Paris, France, Mr. Lauriol read an interesting paper describing a method devised by Mr. Gerard for correcting the fluctuations of current in dynamos driven by gas engines. The Paris municipal plant of Buttes Chaumont contains a Charron gas engine of the one-cylinder, four-cycle type, giving 30 kilowatts at 150 revolutions. It is belted to two direct-current dynamos of 1,500 volts and 10 amperes, each of which supplies a circuit of arcs in series. One of these dynamos is a Henrion series-excited machine, and the other is a Gramme machine with separate exciter on the end of the shaft, the dynamo being excited in shunt at 100 to 130 volts. The gas engine is regulated by reducing the gas admission, there being one explosion every two revolutions. The variations of speed during a revolution at full load reach about 1.5 per cent. on each side of the mean, or three per cent. total difference. When the set is in working order, a constant and marked fluctuation of the light is observed synchronous with the cycle of the motor, namely, once every two revolutions. Different types of arc lamps act differently, but the effect is always marked. The fluctuation depends on the dynamo used. When the engine and the two dynamos are working, the variations are strong in the Gramme circuit and but slight in the other. Mr. Gerard, chief engineer, attributed the difference to the fact that the Henrion machine had more inertia than the Gramme, and the belt transmission did not allow it to follow exactly the variations of motor speed. In fact, a summary calculation gives the following figures:

Motor work during one cycle	3,000 kilogram-meters.
Vis viva at mean speed in flywheel	91,000 kilogram-meters.
Vis viva at mean speed in Gramme armature	2,600 kilogram-meters.
Vis viva at mean speed in Henrion armature	16,900 kilogram-meters.

The fluctuations were then measured by using a registering device analogous to that of Hospitalier, but adapted for low frequency. The main current (see diagram) of the arcs passes in a low resistance (R), at the ends of which is a shunt circuit, passing to a registering voltmeter. A battery of accumulators (D) counterbalances the greater part of the potential difference at the terminals of (R), so that in reality one measures the potential difference (or the current through R) diminished by a constant



REGULATION OF GAS ENGINES USED FOR ELECTRIC DRIVING.—REGISTERING DEVICE.

quantity. In this way readings over a great scale of variations are obtained. A commutator (C), worked by the engine shaft through gearing, closes the circuit (AVC) during a constant period, equal to a small fraction of the motor cycle, and at intervals of time equal to 84/85 of the duration of a cycle. At the end of 85 cycles is found, therefore, a traced curve representing the variations during a cycle, supposing, as in all similar tests, that the 85 cycles are more or less alike. The needle of the galvanometer, starting from zero, receives a series of impulses, in the interval of which the controlling force tends to bring it back. At the end of a few seconds, for a constant value of current, it executes a regular series of oscillations, and a study of the apparatus permits of finding the relation of the position of the needle and the value of the current.

With the Gramme machine the current is periodically variable, increasing rapidly and decreasing slowly. (i) being the maximum variation and (I) the value of the main current, $\left(\frac{i}{I}\right)$ represents, then, the ratio of fluctuation. To correct the variations, Mr. Gerard inserted a rheostat in the exciter circuit, worked by the main shaft of the dynamos; the resistance is then periodically varied and therefore the current of the circuit. By working the main dynamo at constant speed and making the exciting current change slowly, the characteristic at no load is found, and thus is determined the value of the resistances to obtain a given value of field. By regulating the rheostat so as to vary the field in inverse ratio to the speed, one should have a constant electromotive force on the main circuit. The rheostat calculated after these data produced no appreciable effect on the oscillation, and Mr. Gerard tried, experimentally, whether in preserving the principle and modifying the dimensions of the rheostat a better result could be obtained. He was finally successful, and the fluctuations of the light were practically suppressed, which corresponded to a reduction of two-thirds on the current variation. But it was necessary first to give the rheostat a resistance 15 times the theoretical value, and second, in place of making the maximum of resistance conincide with the maximum speed, it was given an advance of about one-eighth cycle.

After giving the theory of the apparatus and showing why the resistances had to be modified, Mr. Lauriol states that the original rheostat had 24 points, but subsequent experiment showed that six points were sufficient in practice, and even four may work. This arrangement worked very well for different values of current. The gas engine thus operated the two dynamos; the Henrion, not provided with an automatic rheostat, worked at a constant load of 10 amperes at 1,500 volts, and the Gramme, with the automatic rheostat, fed a variable number of arcs, giving potentials from 1,000 to 1,800 volts with a constant current of 10 amperes. The resistance absorbs but little energy, and such an appliance is simple and cheap; the resistance may be of simple iron wire, run at a distance from the machine, and connected to it by copper wires. The following numerical data were obtained:

Power of dynamo	15	kilowatts.
Irregularity of speed, ratio $\frac{\text{max.} - \text{min.}}{\text{mean}}$	0.04	
Resistance of automatic rheostat	19	ohms.
Mean current through rheostat	4	amperes.
Power (mean of RI^2), absorbed by the rheostat, about $\frac{19 \times 4^2}{2}$	150	watts.
Ratio of power absorbed to total power	1-100	

As to the fluctuation of light, the Henrion machine gave constantly a percentage of three for the arcs and 1½ for the incandescent. The Gramme machine, without the regulating rheostat, gave at first 10 and two per cent., respectively, but with the rheostat it now gives but 3.5 and 0.5. There may be other methods of regulating the fluctuations of voltage due to gas engines, but the above is to be recommended, at least for certain motor speeds in the neighborhood of one cycle in three-fourths second.

BOOK TABLE.

ARMATURE WINDINGS OF DIRECT-CURRENT DYNAMOS. Extension and Application of a General Winding Rule. By E. Arnold. Translated from the original German by Francis B. DeGress. 1902. New York: D. Van Nostrand Company. Pp. (six by nine inches), vi., 124, with 146 illustrations. Price, $2.

In his work as lecturer upon electrotechnics at the Riga Polytechnic School, Professor Arnold found it difficult to present to the students in a brief and simple manner the various methods of winding armatures for direct-current machines, so as to enable them to solve independently any assumed problem in winding. In endeavoring to establish rules for the various windings, he found that all so-called closed-coil windings could be embraced under a general rule which applied equally well to ring, drum and disk armatures. This book is an exposition of this rule. Beginning with an introductory chapter on "Methods of Connecting Inductors for Obtaining Direct Currents," the author then discusses a great variety of bipolar and multipolar ring, drum and disk armature windings of the closed-coil type. This part of the treatise takes up nearly the entire book, the last 10 pages being devoted to brief mention of open-coil windings, including the Brush ring armature, the Thomson-Houston winding, and the Ferranti-Thomson disk armature. Many of the designs shown in the book are of historic interest only, while, on the other hand, several designs for connections have never been published before. The work fills a unique field, covered, as a rule, unsatisfactorily by the best text-books on electrotechnics, and will be found valuable to the student and designing engineer.

Secretary Root, in accordance with the provisions of the river and harbor law, has prescribed the conditions under which the Michigan and Lake Superior Power Company may divert water from the St. Mary's River into its power canal at Sault Ste. Marie for waterpower purposes. These conditions, which were formulated by Judge Advocate-general Davis, after full consultation with General Gillespie, chief of engineers, proposed diversion of water shall not injuriously affect navigation in the waters affected, nor impair or diminish the water levels or any natural increase thereof, in Lake Superior, in the United States ship canal and locks or their tributaries. The necessary papers were drawn up at the War Department, and have been signed by representatives of the waterpower company.

CORRESPONDENCE

New York Notes.

New York, December 15.—Because of the fact that all the motor cars of the Manhattan Railway Company are not provided with scrapers for the third rail, considerable delay to traffic was incurred last Thursday on account of the accumulation of a thin sheet of ice on the contact rail. A sleet storm was in progress a good part of the day, and towards evening the system was in a pretty bad way. The company is at present busy equipping its cars with scrapers, but the storm came a little too soon. In explanation of the delay to traffic, which caused considerable unfavorable comment by the traveling public, occurring again on Friday, the company gave out the following statement:

"The tie-up was due to the fact that all the motor cars have not been equipped with the new device for clearing the third or live rail of snow or ice, but the work is being rushed as rapidly as possible, and when it is completed there will be no further blocks of the third-rail system. There are 1,150 cars to be fitted with the new device, four to a car, and as there is only one firm which supplies this apparatus, work is necessarily delayed. The apparatus consists of a combination steel brush which scrapes the coating of ice from the rail and a spray which ejects oil upon the rail. The oil is sprayed upon the rail first, and then the brush spreads it evenly and scrapes off the ice. The oil is a special preparation, and loosens the ice so that the brush removes it easily. The steel brush is applied with pressure upon the rail and acts as a conductor in the event of the shoe failing to work. Some of the cars are already fitted with this apparatus, and that is the reason the Second and Third Avenue lines were not entirely blocked. If all the trains had been fitted with this device there would have been no delay on these lines. The entire tie-up of the Sixth Avenue line was due to the running alternately of steam and motor trains. The electric trains were sent out at such long intervals that the third rail had time to freeze again before a motor car equipped with the new device came along."

The Board of Directors of the Interborough Rapid Transit Company has called a meeting of the holders of stock-trust certificates for January 16th to ratify the proposed lease of the Manhattan Railway system by the Interborough company.

A protest has been submitted to the Board of Estimates against the granting to the New York Central and Hudson River Railroad Company any additional rights by the city that should in any way burden the taxpayer. The protest asserts that the proposed new plans of the railroad company will necessitate the building of a number of bridges by the city and will also bring other expenses upon the city. It is further stated that if other companies pay for the privilege of constructing subways under the streets of the city, the New York Central should do likewise. The protest asks that the board refuse to consider any plan from the railroad company that will not at least free the city from any expenditure whatsoever.

Rev. George L. Lose, a student in Drew Theological Seminary, Madison, N. J., was "electrocuted" on Wednesday in his room in the school dormitory through a shock received from an incandescent lighting circuit. The shock killed Mr. Lose instantly. It was a peculiar and probably unprecedented accident. Dr. Lose, who was 26 years of age, was sitting in the dormitory with his feet on a radiator for warmth. He was reading, leaning back in his chair. The light from an incandescent lamp swinging above his head did not suit him. He leaned back to change the position of the lamp, keeping his feet, which were covered with light slippers, on the radiator. Just above the bulb there was a portion of the wire exposed. His hand came in contact with the exposed wire and he was hurled to the floor dead.

The Queensborough Light and Power Company, which has a plant in Astoria, has absorbed the stock of the Hempstead Gas and Electric Light Company, and it will take possession of that company's plant at Rockaway Beach.

The Rosemont Electric Transmitter Company was incorporated yesterday. The capital of the company is placed at $250,000. The directors include Herman Schwarz, Julius Rosenberger and A. H. Schwarz.

The Lewis Manufacturing Company has just been incorporated. The purpose of the corporation is the manufacture of electrical and mechanical appliances. The company's capitalization is $60,000. The incorporators are R. H. Jaeger, L. L. Lewis and J. W. Webster. O.

Southern Developments.

Charlotte, N. C., December 13.—Engineers are making preliminary surveys near Columbus, Ga., for developing a big waterpower. A 54-foot dam will be erected to furnish power for electric cars, electric lights, etc.

It is understood that considerable stock in the local gas and electric light plants at Bristol, Tenn., has been secured by Col. A. H. Leftivich of Baltimore, representing Baltimore capital.

A movement is on foot to build an electric railway between Columbia and Saluda, S. C., a distance of 35 miles.

The Virginia Passenger and Power Company of Richmond, Va., has announced that it will respond to all fire alarms along its line with a wagon equipped with "hose jumpers" and a repair outfit, to obviate the usual delays caused by fires. L.

New England News.

Boston, December 12.—During the "below-zero" weather of Tuesday morning the Boston Elevated Railway Company used oil to keep the track switches from freezing. The salt and water mixture, which is generally used, froze about as fast as it was applied.

A majority of over 25,000 Boston voters cast their ballots in favor of accepting the Washington Street subway bill, at the municipal election, Tuesday. This insures the building of that much-needed addition to the city's transportation facilities. The opposition of the so-called labor element, due to the non-recognition of the labor unions in the employment features of the bill, proved futile.

The Worcester and Northern Street Railway Company is being organized and the capital stock of $150,000 has been subscribed. It proposes to build and operate an electric railway between the Jefferson (Mass.) terminus of the Worcester and Holden Street Railway and Westminster, Mass., where it will connect with the Fitchburg, Westminster and Gardner Street Railway. It will apply for a location up Mount Wachusett, where it will use cable on the grades that are too steep for electricity.

The Boston Suburban Electric Companies' stockholders have elected the following-named trustees: Horace B. Parker, R. E. Townsend, Frederick H. Lewis, William H. Coolidge, and Charles M. Baker. The last named succeeds George M. Morse, but the others were re-elected. The company's statement for a portion of the year ended September 30, 1902, shows: Income, $65,977; expenses, $2,762; dividends, $58,734; surplus, $4,480. The company assumed control of its railway properties on January 1, 1902, of the Waltham company during last spring, and of the Norumbega Park company during last summer.

The Hartford and Norwich Street Railway Company will ask that an act of incorporation be granted it by the next Connecticut Legislature. If the charter is granted, the company will build an electric railway between Hartford and Norwich, Conn., via Franklin, Lebanon, Columbia, Andover, Coventry, Bolton and Manchester. At the latter place it will connect with the Hartford, Manchester and Rockville Tramway Company's road. The proposed road will run through several communities which now have no electric railways. B.

From the Buckeye State.

Cleveland, Ohio, December 13.—At a meeting of the directors of the Cleveland, Elyria and Western and the Cleveland and Southern, held a few days ago, a plan was agreed upon for the merging of the two companies. The plan provides that the new company shall be known as the Cleveland and Southwestern, and that it shall have a capital stock of $5,000,000, with a bond issue of $3,000,000. The stock will be divided into $3,000,000 worth of common and $2,000,000 of preferred. The basis of division is that the stockholders of the Cleveland, Elyria and Western shall receive 60 per cent. of the preferred and 100 per cent. of the common. The stockholders of the Cleveland and Southern will receive $500,000 of the preferred stock and the same amount in bonds. After the exchange is made the new company will have $900,000 in bonds and $300,000 in preferred stock remaining. A portion of this will be used to purchase the light plant at Norwalk.

The Fremont Yaryan Company, Fremont, has completed its hot-water plant, and it is said that it will also install an electric-lighting plant.

The committee from the labor associations, which has been going over the books of the two Cleveland street-railway companies, has about completed its work, and is making up its report to be made public within a short time. While nothing of importance has been given to the public, it is known that the report will say that the cost of carrying a passenger in that city is about three cents, and that it will recommend a somewhat lower fare than at present, perhaps six or seven tickets for a quarter, instead of 11 for 50 cents, as at present.

The Cincinnati, Dayton and Fort Wayne Railway Company of Dayton has been incorporated with a capital stock of $1,000,000, for the purpose of building an electric road from Cincinnati to Toledo and Fort Wayne, Ind. The incorporators are Dr. Samuel F. George, C. E. Gebhart and others. The line will keep well to the western part of the state, and the portion to Fort Wayne will leave the state line in Van Wert County. Dr. George is a prominent Dayton citizen and a promoter of some note.

Forty Cincinnati capitalists made a trip over the Dayton, Springfield and Urbana, the Columbus, London and Springfield and the Central Market Street Railway lines a few days ago for the purpose of making a thorough inspection of the property. The distance of these lines from Columbus to Dayton is 77½ miles, and the Central Market controls 31 miles of track in Columbus. These gentlemen found one of the finest electric roads in the world, built on the steam-road standard, with overhead equipment second to none and cars about the same as any first-class railroad coach. All the cars are 62 feet in length, except those which are operated in trains, and they are 50 feet long. Fred J. Green and H. M. Jenks of the Appleyard syndicate accompanied the party and acted as escort.

The Portsmouth Street Railway Company has made a contract with the Westinghouse company for power machinery to operate the Hanging Rock extension of the road.

The Fostoria Glass Specialty Company's plant at Fostoria was destroyed by fire a few days ago, causing a loss of between $40,000 and $50,000. The insurance is only $17,000, it is said. The company manufactured all kinds of glass articles used in electrical work and was owned by the Fostoria Incandescent Lamp Company and the Fostoria Bulb and Bottle Company. The fires in the kilns have been kept up to save the goods in process of burning.

It was announced in Cleveland this week by George McCulloch of Indianapolis, that the Union Traction Company had purchased the Fort Wayne street-railway system which was owned by a Cleveland syndicate, but the price has not been made public and nothing can be learned in regard to it. Dan P. Ellis is president of the Fort Wayne company and H. P. McIntosh is secretary, but they will give no particulars of the deal, more than that it has been made.

Many of the electric railways of northern Ohio were well-nigh tied up by the sleet and ice Friday. The Lake Shore was entirely idle for some time, and other roads, including the city lines of Cleveland, could not operate on schedule time. Telegraph and telephone lines were also down, and this added to the danger of attempting to run the cars. The cold weather was accompanied by a blizzard which caused much suffering to the men who attempted to make repairs and get things into working order.

The Maumee Valley Railway and Light Company of Toledo has been incorporated with a capital stock of $1,000,000 for the purpose of taking over the properties of the Toledo and Maumee Valley Railway Company and the Toledo and Waterville Railway Company, both of which are operated in the Maumee Valley. President Lang of the Toledo Railways and Light Company says the new company was formed only for the purpose of uniting the management of the two lines which belong to the same parties, the Everett-Moore syndicate.

The stockholders of the Havana and Jaimanitas Railway Company of Cuba held a meeting at the Hollenden Hotel, Cleveland, a few days ago to discuss matters pertaining to the building of lines in Cuba. Secretary York said after the meeting that it had been decided to begin the work of construction at once and push the lines to completion as soon as possible. O. M. C.

Detroit, Mich.

Detroit, December 13.—The Detroit United Railway is busy stringing new feeder cables from power house "B," where a new generator has been installed, to most of the lines of the city. The new power will be necessary for the increased travel of the public during the time before and just after Christmas. The lines to be benefited will be Woodward, Grand River, Third, Fourteenth, Gratiot, Brush, Crosstown, Chene and Trumbell. The heaviest cable is used along Woodward, from the river to Warren Avenue.

As the direct result of the successful operation of the plan of collecting mail in the city of Grand Rapids by street car, the postmaster-general proposes to proceed with the installation of mail boxes on street cars on a much broader scale, with the assumption that it will add greatly to the convenience of the letter-writing public, especially in districts where it is impossible to make frequent collections by the present system

The Detroit, Monroe and Toledo Short Line Company has been incorporated with a capital of $3,000,000, and will extend the present Black-Mulkey line between Monroe, Mich., and Toledo, to Detroit. Mr. Mulkey says $2,000,000 will be spent extending the present line from Monroe to Detroit, and $1,000,000 will be used later for double-tracking. Work on the extension will be pushed as soon as the frost is out of the ground next spring. It has not been decided whether to build directly into Detroit, via Fort Street from Flat Rock or come in via Trenton and Wyandotte, but in any event the road will build in over its own rails, but after reaching the city an arrangement will be made with the Detroit United to use its tracks. The directors of the company held a meeting to-day, at which the following-named officers were elected: President, Matthew Slush; vice-president, Clarence A. Black; second vice-president, A. E. F. White; secretary, C. J. Reilly; treasurer, C. R. Hannan. There was also elected an executive committee to represent the board of directors in order to expedite business. This committee consists of C. J. Reilly, C. R. Hannan and J. M. Mulkey.

Charles A. Chapin has settled all speculation as to what he intends to do with the 12,000 horsepower which his dam in the St. Joseph River at Buchanan, Mich., furnishes. He says this power will be transmitted to South Bend, Ind., to be used for manufacturing purposes. He says no arrangement exists whereby he is to furnish power to operate the Indiana Railway Company's line between Niles and South Bend. Mr. Chapin has erected a $250,000 power house at Buchanan, and the fears of the village that the power was to be transmitted beyond

the town were well founded. In the hopes that the town would become a great manufacturing center, $50,000 was contributed toward the construction of the dam, and interest is still being paid on that sum. C. G. W.

Information from Indiana.

Indianapolis, December 15.—When announcement was made from Philadelphia last week of the incorporation by the Widener-Elkins interests of the Indiana Company, with $1,000,000 capital, as the construction company for the new Indianapolis belt lines and terminal station, it was said that the lease of the Indianapolis Street Railway Company to the terminal company would soon be consummated. The first step toward such a combination will be taken before the close of the year, when the stockholders of the local company will vote on the proposition to lease the lines to the terminal company. The terms of the proposed lease were made public last week. The terminal company offers to lease the property of the local company, guaranteeing dividends on the street-railway stock of one per cent. on January 1st next, and thereafter semi-annually three per cent. for the first year, four per cent. for the second year, five per cent. for the third, and from July, 1906, six per cent.—the term of the lease being 30 years, at which time the local company's franchise expires. There is little doubt that the proposition will be approved, as the control of both companies is vested in the Widener-Elkins people. When the lease is approved, the capital stock of the terminal company will be increased to $5,000,000. Of this, $1,500,000 will be given to stockholders in the street-railway company, in proportion of 30 per cent. of their holdings of street-railway stock, as a part consideration for their approval of the lease. The terminal company will authorize the issue of $5,000,000 of five per cent. bonds, of which $3,000,000 will at once be sold to provide funds for the construction of the terminal station and belt lines. This will make the capitalization of the terminal company $10,000,000, on half of which it must pay five per cent. It not only guarantees the dividends to stockholders of the street-railway company, but it guarantees the interest charges on the street-railway bonds, two issues of $10,000,000 in all, $4,000,000 of five per cent. Citizens' Street Railway consols, guaranteed by the Indianapolis company, and $6,000,000 of the Indianapolis company. After July, 1906, the fixed charges which the traction terminal company will have to meet annually will amount to $1,000,000 or more. In addition, the lessee will pay $30,000 annually to the city, until 1925, and after that time $50,000 annually until the expiration of the franchise, dividends on the $5,000,000 stock of the traction and terminal company and a graduated car tax to the city. The site for the $1,000,000 terminal station has been secured in the very heart of the city, between Illinois Street and Capital Avenue, and will occupy three-quarters of a square. The inner belt line through Ohio, Georgia, Delaware Streets, and Capital Avenue will be constructed at once and the terminal station will be completed within a year. The proposed lease is to go into effect January 1st.

The new Consolidated Traction Company of Indianapolis has filed a map and profile of the route the company will follow in Marion, Hendricks, Boone and Montgomery Counties. Agents are procuring deeds for the right-of-way, and President Hawkins says the construction of the line will begin in a short time. This line will run northwest through Clearmont, Brownsburg, Pillsboro, Ramstown and Crawfordsville.

The new interurban line running between Cambridge City and Milton was opened on the 12th inst., the first car running into Milton on that day. An hourly schedule will be adopted.

The Indiana Appellate Court has sustained the right of the Indianapolis, Greenwood and Franklin interurban line to the $34,000 subsidy voted the company by the town of Pleasant, in Johnson County. A few taxpayers sought to enjoin the collection of the subsidy on the grounds that the road was expected to be a commercial road, since it was organized under the commercial-road law of 1853. The commissioners of Johnson County decided that the road had complied with all the necessary conditions in the carrying of package freight and was entitled to the subsidy, and the Appellate Court affirms the ruling of the commissioners.

In a conference between President McCulloch of the Union Traction Company and his motormen and conductors on Saturday it was agreed that the wage scale for the coming year would show an increase of 10 per cent.

The grade-crossing problem of necessity must be solved in Indianapolis on account of the numerous recent collisions and accidents to street cars and passengers. Some time ago the council passed an ordinance requiring the steam roads to elevate their tracks. They resisted this demand, and took the case to the Supreme Court, where it is now pending. The mayor now proposes to submit the matter of providing for viaducts or grade-crossing devices to a committee of seven citizens, and it is now believed that some such plan will be adopted instead of requiring the steam roads to elevate their tracks. In the meantime, there is a general desire to know how the Supreme Court will hold on the right of a city to compel track elevation.

John G. Brijson of Brazil has secured a 10-year contract to light Greencastle. A new electric-light plant will be erected. It is thought he represents a Boston syndicate.

The Western Indiana Traction Company of Vincennes, has filed incorporation papers, which set forth that the company will construct interurban railways in Knox, Sullivan, Vigo, Posey, Gibson and Vanderburg Counties. The first line will be built from Vincennes to Sullivan, and extensions will be made from that line. The capital stock is $100,000, and Edgar H. DeWolf of Vincennes heads the board of directors. F.

Northwestern Notations.

Minneapolis, September 13.—Fred Glick of Marshalltown represents Marshalltown (Iowa) parties who have bought the electric-light plant at Nevada, Iowa, and Mr. Glick is in charge.

The Electric Light and Power Company of Hastings, Minn., is making extensive improvements to its plant. About 125 transformers will be taken out and replaced by six large ones.

The Menominee Electrical Manufacturing Company of Menominee, Mich., has been reorganized, and the interests of Robert E. Jennings were transferred to new owners.

A private plant to furnish electric light for the new federal building in St. Paul is projected. The estimated cost of the plant is $25,000.

The Lincoln Traction Company of Lincoln, Neb., will make a large extension to its power house and will enlarge its power plant.

Counsel for the Twin City Rapid Transit Company and for the city of St. Paul have been on a tour through the East, taking depositions of electrical men, to be used in the trial against the company for damage to water pipes by electrolysis.

Low water in the Mississippi River has been the cause of the Twin City Rapid Transit Company being short of power to operate its street cars in Minneapolis and St. Paul. The company ordered auxiliary steam plants last spring for August delivery, and they have not yet been received and put in place. A good deal of the equipment has come, but some very important parts are missing, and, despite the efforts of the company, they cannot be secured. The result is that the street-car service in the cities has been miserable. At the busy hours it has been an impossibility for half the crowds to get cars, and office and store help has been late day after day because of the poor service.

The council of Carlton, Minn., has awarded a contract to the Cloquet Electric Company of Cloquet, Minn., to furnish electric lighting. The company will string wires from its plant in Cloquet to Carlton. R.

Texas and Mexico.

Austin, Texas, December 13.—The Metropolitan Street Railway Company of Dallas, which was recently organized by Boston men with a capital stock of $4,500,000 for the purpose of carrying into effect plans for the consolidation and operation of the Dallas Consolidated Electric Street Railway Company and the Dallas Transit Company, is meeting with difficulty in carrying out its plans. It is understood that should the plans for consolidation fail the Metropolitan Street Railway Company will operate its own line separately, although possessing the other two systems.

The City Council of Beaumont is trying to enforce an ordinance requiring the Beaumont Street Railway Company to provide separate accommodations for the white and colored passengers. The enforcement of this provision will work a great hardship on the company, as it will necessitate an increase of its equipment without any addition of business.

It is announced that the syndicate of Baltimore (Md.) capitalists which recently acquired the two street-railway systems in Monterey, Mexico, and obtained a concession from the state and municipal governments to build new lines of railway over the principal streets, not already occupied, will incorporate the new company under the laws of New Jersey with a capital stock of $1,500,000, gold.

A company is being organized to build an interurban electric line between Paris, Texas, and Detroit, Texas, passing through the town of Blossom. The distance is about 30 miles.

C. C. Waller of Houston, who is promoting the building of an interurban electric road between Houston and Galveston, a distance of 50 miles, has applied to the City Council of Houston for a franchise for the proposed road over certain streets of that city. It is understood that Chicago capitalists are the financial backers of the project.

An electric-light and power plant is to be established in the city of Ameca, state of Jalisco, Mexico, by a syndicate of Mexican capitalists. The electric energy will be generated by a waterfall near Ameca.

Otto Scheller, a German electrical engineer, is at Guaymas, Mexico, where he is establishing a system of wireless telegraphy for the Mexican government between that place and points on the peninsula of Lower California.

The Federal District Street Railway Company of the City of Mexico is arranging to build an extension of its system to the town of Texcoco, a distance of 18 miles from the City of Mexico.

An American syndicate has about closed a deal for the purchase of the street-railway system in the city of San Luis Potosi, Mexico. If the transaction is consummated, it is proposed to convert the system from mule to electric power.

Vicente Viegra, a capitalist of Gamazula de Gordiano, state of Jalisco, Mexico, is constructing an electric-light plant at that place. W. D. H.

Among the Rockies.

Salt Lake City, December 12.—The City Council of Florence, Colo., met this week and granted a franchise to Thomas Robinson of that city for building an electric street-car railway in Florence.

A large power and irrigation project has been floated by Senator A. B. Lewis in Beaver County, Utah. It will reclaim 4,000 acres of the best land in the state and develop 800-horsepower for use of mines and street-car and electric lines. An immense storage plant will be put in at Minersville Canyon, and a dam 64 feet high will be built, the reservoir to cover 187 acres. The electrical-power enterprise is independent of the irrigation project. A fall of 164 feet is secured.

Superintendent Heap of the Phœnix (Ariz.) street railway has just installed a new power plant for the company. Part of the machinery is being placed and it is anticipated that the road will be ready for business next month.

The Consolidated Street Railway and Power Company has a proposition under consideration for building its own cars for Salt Lake lines.

A consignment of machinery for the plant of the Boise-Payette River Electric Company arrived this week at Emmett, the terminus of the Idaho Northern Railroad. It was forwarded at once to the site of the plant at Horseshoe Bend, where it will be installed immediately. The consignment of machinery embraced about 150,000 pounds. G.

On the Pacific Slope.

San Francisco, December 10.—Ground was broken this week for the new 2,000-horsepower steam-power electric generating plant of the North Shore railroad in Marin County, Cal. The company will operate electric and steam trains over a portion of its lines. A system of electrically operated signals will prevent any two trains from entering the half-mile sections at the same time.

The Mutual Electric Light Company of San Francisco is now obtaining estimates from steam and electric-machinery manufacturers with a view to equipping an additional electric power house. A steam plant of high efficiency will be installed at the corner of Folsom and Steuart Streets. The initial installation will probably consist of two 1,500-kilowatt, two-phase generators, each direct-connected to a horizontal engine. An improved underground-conduit system will be installed.

The following official statement has been made by the Pacific Light and Power Company of Los Angeles, Cal.: "Our company was organized for the purpose of generating and distributing electric current for light and power. The company has purchased the plant of the San Gabriel Electric Company, consisting of a waterpower generating station at Azusa, with an installation of 1,600 horsepower; a waterpower station in San Antonio Canyon, 40 miles distant from Los Angeles, with an installation of 800 horsepower; transmission lines extending from Azusa, 23 miles, and from San Antonio, 40 miles to Los Angeles, Cal.; and distributing lines throughout Los Angeles and surrounding territory. In addition to this, the company has a 3,000-horsepower steam plant, installed at its station in Los Angeles, Cal. The company is now building a plant on Kern River, distant 105 miles from Los Angeles, where a plant of 10,000 horsepower, with ample reserve, is being constructed. From this plant there will be two separate and distinct transmission lines for the entire distance. The power generated will be used in Los Angeles to supply the system of the Pacific electric railway, as well as of the Pacific Light and Power Company. In addition to this, the company is about to double its steam plant, which is to be held in reserve, to be used in case of accidents, etc." A.

PERSONAL.

Charles H. Pinkham, general manager of the Bay State Electric Light, Heat and Power Company, died in New York city on December 8th. He was 53 years old and was born in Salem, Mass. He was the first president of the Bank of Harlem, which he founded in 1888.

At a recent meeting of the New York Electrical Society the following-named gentlemen were elected to membership: W. A. Belden, J. O. Sinkinson, Thompson D. Harbinson, M. B. Foster, Leon E. Schmielewski, W. C. Andrews, Charles R. Pratt, Harold Melbin, E. B. Conrad and A. Frederick Collins.

Charles W. Wason, president of the Cleveland, Painesville and Eastern Railroad Company of Cleveland, with his wife, will leave Cleveland in a few days for a trip around the world, which will take about six months. The employes in the office presented him a fine gold watch on Friday of last week. Mr. Wason is a prominent electric-railway man and has also been active in Independent telephony. At the New York convention of 1901 he was elected first vice-president of the American Street Railway Association.

ELECTRIC LIGHTING.

The National Electric Light Association states that its membership is now just double what it was at the time of the Cincinnati meeting last May, having added 180 new names to its list of members. Since November 1st the association has gained 45 new members.

The Merchants' Electric Light Company of York, Pa., is considered by the Borough Council of North York for the purpose of furnishing electric light for that thriving borough. Poles will be planted, wires strung and an effort made to set aside the old company.

The bureau of insular affairs of the War Department announces that it is now prepared to give information desired by possible bidders for the Manila street-railway and light and power franchises. The bids as before mentioned in the Western Electrician will be opened in Manila on March 5, 1903. The proposed railway system covers a route 35 miles long. The lighting system is for Manila and suburbs. Construction must begin within six months after awarding the contract and be completed 20 months thereafter.

Bids for lighting the city of Seattle (Wash.) for the next year were opened in that city recently. The Seattle Electric Company submitted a bid as follows: For inclosed arc lamps (66 amperes, 78 volts), each, per annum, $66, and for 30-candlepower incandescent lights, each, per annum, $15. This proposal is for furnishing lights for the entire city, and is contingent upon the acceptance of the whole proposal. This bid for arc lights is $6 less than last year's price. About 250 incandescent lights and 25 arc lamps will be needed in excess to those used last year.

ELECTRIC RAILWAYS.

It is now asserted that arrangements have been perfected for the Berlin (Germany) underground-railway project and that its success is assured. The road will cost 56,000,000 marks, which sum will be raised by a special loan. The line will belong to the municipality, and will be 11 kilometers long, with 15 stations, including the termini. It will run from the north to the south of the German capital under the most busy thoroughfares. The trains, consisting of seven carriages, will run every three minutes. The tunnels throughout will be lined with concrete. The work is expected to be begun next summer, to be completed in six years.

The Chicago Junction Railroad Company of Chicago has been incorporated, with a capital of $50,000. The incorporators and the first board of directors are Frederick R. Babcock, William Raymond, James Miles, John D. Black and Edward W. Everett. The corporation will extend the South Side elevated road to the stock yards, where a loop will be constructed, and to the east along the Lake Shore boulevard line to a connection with the Illinois Central. Work will be begun as soon as material can be brought to the ground. Residents of Englewood, in the southwestern part of the city, are demanding that an extension of the elevated road be built into their section.

Redondo Beach, near Los Angeles, Cal., is soon to be connected with that city by two electric-railway lines. The Redondo Railroad Company has already equipped its line with electricity and will soon begin operations. The second line is being built by the Los Angeles Pacific Railway Company. This latter is a branch from Santa Monica, which is being pushed down along the coast. It is expected to have this branch in operation by Christmas. When these new lines are in operation Los Angeles will have rapid transit by electric lines to all the beach points, including Long Beach, San Pedro, Redondo and Santa Monica, the first three named having been constructed within the last six months.

AUTOMOBILES.

Speaking about his new storage battery for automobiles, Thomas A. Edison is reported to have made this remark recently: "I don't intend to let a battery be put on the market for at least three months, or until I have made a 5,000-mile endurance test, and have discovered all the weak points and rectified them."

PUBLICATIONS.

The Central Electric Company of Chicago is distributing to the trade a new No. 9 D. & W. price list. This price list, which contains half-tone cuts of all D. & W. products, includes much new material not heretofore listed.

In an eight-page bulletin the Mechanical Appliance Company of Milwaukee, Wis., gives the characteristic features of its Watson multipolar motors and generators. Illustrations show various parts of the machines and different adaptations of the motors.

The Emerson Electric Manufacturing Company of St. Louis, Mo., has issued an illustrated bulletin descriptive of its forge and volume blowers with direct-connected alternating-current motors. The motors range in size from one-tenth to one-third horsepower, according to the size of the blower. Another Emerson bulletin describes the company's automatic-start induction motors for single-phase currents in sizes of one-tenth and one-twentieth horsepower.

The report of the twenty-first annual meeting of the American Street Railway Association in Detroit last October, has been issued in book form by Secretary T. C. Penington. The volume contains 341 pages (nine by six inches) of reading matter, including a convenient table of contents. The frontispiece is a fine steel engraving of ex-President H. H. Vreeland of New York. Besides a full account of the proceedings of the convention, the book contains a complete roster of the officers of the association since its organization, lists of the delegates, visitors and exhibitors at the Detroit convention, the constitution and by-laws of the association and a list of members.

TRADE NEWS.

The Chicago Electric Manufacturing Company has been dissolved.

The Klute-Barthold Electric Company of Chicago has been incorporated with a capital of $5,000. The purpose of the corporation is "electric manufacturing." The incorporators are Henry Klute, Emma Klute and E. E. Barthold.

The Cutler-Hammer Manufacturing Company of Milwaukee, Wis., has opened an office in Pittsburg, at 319 Frick Building. The office will be in charge of C. C. Bodeau, formerly with the Wagner Electric Manufacturing Company of St. Louis, Mo.

The Dayton Fan and Motor Company of Dayton, Ohio, has made arrangements with the Diehl Manufacturing Company, whereby it has obtained a perpetual license to manufacture fans which embody the principles covered by the Diehl-Bennett patents.

The Reynolds Electric Company of Chicago has certified to a change of name to the Reynolds Electric Flasher Manufacturing Company and to an increase in capital from $2,500 to $15,000.

The Independent Arm and Pin Company, successor to the manufacturing business of the Citizens' Electric Light and Manufacturing Company of Woodstock, Ill., has been incorporated with a capital of $100,000. The company recently opened an office at 1018 Chamber of Commerce, Chicago. Marcellus L. Joslyn is general manager of the firm. The company manufactures crossarms, oak and locust pins and oak brackets. It has factories in Crystal Lake, Ill., Muscoda, Wis., Mize, Miss., and in North Carolina.

BUSINESS.

The Electric Appliance Company of Chicago asserts that it has in Chicago stock for immediate shipment the largest stock of weatherproof wires carried by any house west of the Allegheny Mountains.

The Marshall-Sanders Company announces that it has placed a very complete stock of all its specialties, sockets, switches, cut-outs, plugs and receptacles with Hart & Co., Monadnock Building, Chicago, who can make prompt shipment of everything in this line.

George W. Hoffman of Indianapolis, Ind., manufacturer of the U. S. metal polish paste, states that this has been an exceptional year in his business, which has doubled that of last year. He is shipping this polish and other polishing specialties all over the world.

The Chicago and Alton Railway Company's latest advertising card shows a tramp painfully penning a note to the company, stating that he has found this railway between Chicago, St. Louis and Kansas City the rockiest road he ever walked on, incidentally complimenting, of course, the rock-ballasted track.

The Hemingray Glass Company, Covington, Ky., the well-known producer of glass insulators for telephone, telegraph and electric-light purposes, continues to do an excellent business. Hemingray insulators are used all over the country and the constantly increasing number of new customers proves their popularity.

The Western Electric Company reports very gratifying results from its constant-potential alternating arc lamp. This lamp operates on the repulsion principle, "and," the company says, "the favor with which the central-station managers have received this lamp, as well as the fact that a competing manufacturer has recently copied the details of its mechanism, are tributes to its intrinsic worth."

The Mechanical Boiler Cleaner Company, Chicago, reports an order just received from the Cudahy Packing Company for seven cleaners. This makes 65 cleaners installed in the plants of that company. A duplicate order has also been received for 13 cleaners from the Fort Wayne Gas Company. The Mechanical Boiler Cleaner Company, owning all the Garrigus patents, and, it is said, all patents covering a floating skimmer, is doing a large business. It claims to have the only method of keeping boilers perfectly clean, as its device removes all impurities from the water.

ILLUSTRATED ELECTRICAL PATENT RECORD.

Issued (United States Patent Office; December 9, 1902.

715,235. Reversing-switch Controller for Electric Motors. James I. Ayer, Malden, Mass., assignor to the Simplex Electric Heating Company, Boston, Mass. Application filed February 17, 1902.

The device comprises starting and stopping mechanism and a reversing switch for a motor, a spring-actuated locking device for engaging the switch and holding it against movement, and a retractor actuated by the operation of the mechanism to move the locking device into and out of locking engagement with the switch.

715,236. Booster System. George Baehr, McKeesport, Pa., assignor to the National Tube Company, Pittsburg, Pa. Application filed February 14, 1902.

In the system combined with a motor are automatic means for increasing the amperage and voltage of the current at the motor terminals in proportion to the increase of the load on the motor.

715,254. Protector for Electric Lamps. Frank B. Garretson, Worcester, Mass., assignor to himself and William J. Gindele, Worcester, Mass. Application filed November 29, 1901.

The device consists of spring wires covered by woven-wire cloth.

715,265. Thermo-electric Pile. Albrecht Heil, Frankfort-on-the-Main, Germany, assignor to A. Wolf, Jr., & Co., Frankfort-on-the-Main, Germany. Application filed April 22, 1902.

A thermo-electric element or couple comprises a block, a strap connected to the block extending horizontally, then upward and backward and over the block, and a strip connected to the extended end of the strap.

715,281. Electrolytic Apparatus. Joseph Matthews, Kings Heath, and William Davies, Selby Park, England. Application filed March 29, 1901.

An outer tank or vat has an inner tank or vat of perforated insulating material with a revolving drum mounted therein having a number of radiating arms or rods passing through and supporting an outer circular face of insulating material with electrical connections to the cathode and anode parts of the apparatus.

715,291. System of Control for Electrolytically Propelled Vehicles. William B. Potter, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed April 8, 1899.

Means are provided for controlling the electric circuit in response to changes of pressure in the air-brake system.

715,299. Electric Elevator. Harold Rowntree, Chicago, Ill., assignor to the Burdett-Rowntree Manufacturing Company, Chicago, Ill. Application filed November 29, 1899.

In the elevator are a hoisting motor, an electrically operated main switch, means for controlling the same including a series of push buttons, one arranged at each floor or landing, and a corresponding series of push buttons arranged on the car and each push button adapted to close the circuit of the switch-operating means, and an auxiliary switch actuated coincidentally with the main switch for breaking all the push-button circuits as the motor circuit is completed.

715,313. Process of Forming Electric Conducting Cables. Russell Spaulding, New York, N. Y. Application filed May 3, 1902.

The process consists in braiding a number of fine wires to form a tube, next flattening the tube and finally covering the flattened, braided tube with insulation.

715,327. Rheostat. Frank C. Watson, Philadelphia, Pa., assignor to the Smith-Watson Manufacturing Company, Philadelphia, Pa. Application filed April 2, 1902.

In the rheostat are combined a suitable hollow casing, a resistance inclosed therein, a resistance coil carried by the casing and having its convolutions exposed at one point, a contact member movable over the resistance coil, and suitable terminals for the coil and contact member.

715,329. Rail Chair and Insulator. Walter D. Young, Baltimore, Md., assignor to the National Safety Third Rail Company, New York, N. Y. Application filed October 18, 1901.

The third-rail insulator described comprises a base having outwardly and downwardly extending spike-receiving sections, and parallel inwardly inclined flanges, and an insulator block having its base formed to enter slidably between the flanges.

715,332. Accumulator Electrode. Richard Alexander-Katz, Berlin, Germany. Application filed August 31, 1899.

A number of frames of non-conductive material, each in the form of a wide-meshed grating of even thickness throughout have active material in the interstices of the grating and flush with the surfaces thereof.

715,334. Electric Safe Lock. James M. Allen, St. Louis, Mo., assignor of eleven and one-half twentieths to George H. Price and Isabel H. Nelson, St. Louis, Mo. Application filed June 7, 1901. Renewed May 15, 1902.

An electromagnet is placed in co-operative relation with the bolt. Another electromagnet is used for energizing the magnet from the outside of the safe, and retracting the bolt from its locked position, the electromagnet serving as a temporary handle for the door.

715,343. Accumulator. Frederic N. Blanc, Paris, France. Application filed February 17, 1902.

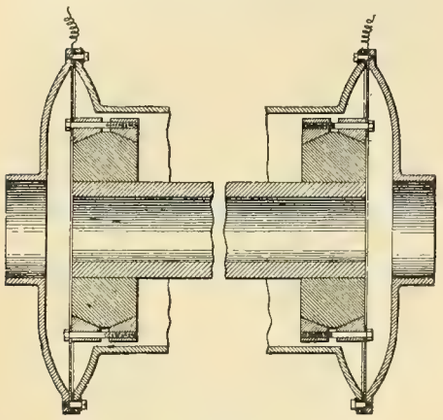
A support for the electrode consists of aluminum electroplated with copper and covered with metallic lead.

715,347. Telegraph. John E. Carney, Montgomery, Ala. Application filed May 27, 1901.

An electromagnet normally short-circuited is adapted when energized to hold a detent adapted to lock the signaling system withdrawn from operative position.

715,375. Insulator. Morton Harloe, Hawley, Pa. Application filed May 9, 1902.

The insulator has a body petticoated and adapted to be secured to a peg, the crown thereof being comprised in three projecting lugs.



NO. 715,509.—ELECTRIC FURNACE.

715,412. Storage Battery. Leonard Paget, New York, N. Y., assignor to Charles Coster, New York, N. Y. Application filed September 8, 1899.

The battery has an absorbent material for the electrolyte consisting of silicated tufa.

715,413. Storage Battery. Leonard Paget, New York, N. Y., assignor to Charles Coster, New York, N. Y. Application filed August 28, 1901.

A multiple-cell storage battery has battery plates extending edgewise from one cell to another with the sole conducting connection between the cells formed by the active material.

715,415. Electric Trolley-wire Hanger. Alexander Palmros, Columbus, Ohio, assignor to the Jeffrey Manufacturing Company, Columbus, Ohio. Original application filed September 24, 1897. Divided and this application filed June 6, 1901.

A casting adapted to be secured to a support and provided with an interior recess, angular in shape, surrounded by an integral wall is provided with a hanger having a head arranged to enter the recess or socket, insulating material between the head of the hanger and the casting, and means carried by the hanger for securing the trolley wire thereto.

715,428. Electrical Controller. Jacob L. Schureman, Jr., Chicago, Ill., assignor of one-half to John W. Hayden, Chicago, Ill. Application filed December 4, 1899.

The controller comprises a circuit-breaking switch and a commutator, a driving shaft, actuating means for operating both the switch and the commutator, and means independent of the switch-operating means for imparting motion to the commutator.

715,434. Electromagnet. Alfred Stromberg, Chicago, Ill., assignor to the Stromberg-Carlson Telephone Manufacturing Company, Chicago, Ill. Application filed January 2, 1902.

The electromagnet includes a swinging armature and a magnetic core portion comprising a main core body and a screw at the end of and projecting beyond the main core body and in threaded engagement therewith and opposed to the armature, whereby the air-gap between the core portion and the armature may be adjusted.

715,455. Sanitary Attachment for Telephone Transmitters. Henry Baethig, Buffalo, N. Y. Application filed May 23, 1902.

Combined with a mouthpiece of a telephone transmitter provided on its front portion with a hook or catch are a sheet support arranged adjacent to the transmitter, and a guide arranged to direct the sheets from the support to the hook or catch.

715,505. Electric Furnace. Henry N. Potter, New Rochelle, N. Y., assignor to George Westinghouse, Pittsburg, Pa. Application filed November 21, 1901.

The furnace consists of a tube composed of a mixture of dry electrolytes constituting the conducting portion of the furnace, the tube being provided with confronting electric-circuit terminals arranged in pairs at opposite ends of the tube, and the pairs of terminals being symmetrically spaced.

715,506. Electric Furnace. Henry N. Potter, New Rochelle, N. Y., assignor to George Westing house, Pittsburg, Pa. Application filed November 21, 1901.

A carbon tube constitutes the main body of the furnace and has conical ends with flaring carbon terminals adapted to fit the ends, and ring terminals of metal surrounding the carbon terminals.

715,507. Tubular Electric Furnace. Henry N. Potter, New Rochelle, N. Y., assignor to George Westinghouse, Pittsburg, Pa. Application filed February 7, 1902.,

The furnace has a tube of carbon and is surrounded at intervals along its length by supporting collars of carbon extending at right angles to the tube.

715,508. Electric Furnace. Henry N. Potter, New Rochelle, N. Y., assignor to George Westinghouse, Pittsburg, Pa. Application filed March 27, 1902.

There are a main stationary tube and an inner rotatable tube of carbon provided with a lining of magnesia or the like, the inner tube being capable of free rotation within the main tube when the furnace is in operation

715,509. End Support and Circuit Terminal for Carbon-tube Furnaces. Henry N. Potter, New Rochelle, N. Y., assignor to George Westinghouse, Pittsburg, Pa. Application filed March 28, 1902. Renewed October 28, 1902.

In the furnace are a tubular body having carbon terminals at each end, metallic ring terminals clamped to the carbon terminals, and an insulated diaphragm at each end rigidly connected with the metallic terminals. (See cut.)

715,511. Snap Switch. Henry E. Reeve, Brooklyn, N. Y. Application filed February 12, 1902.

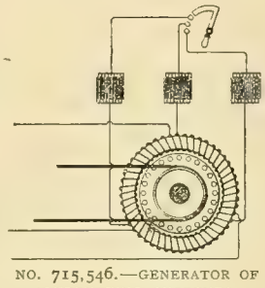
In the switch are combined a movable contact, a latch movable with the same, a reciprocating frame, and a stud movable with the frame for locking the latch in either of two positions and for releasing the latch at the completion of the stroke of the frame.

715,528. Fuse Box. Milton R. Utley, Chicago, Ill., assignor of one-half to Charles F. Slacks, Chicago, Ill. Application filed May 13, 1901.

Combined with the box and the cover therefor is an insulating block or lining mounted upon the cover, a space from the top edge to the bottom edge of the cover being left between the insulating block and the cover for the passage of water.

715,537. Composite System of Electrical Transmission. Frederick Bedell, Ithaca, N. Y. Application filed March 20, 1900.

One claim reads: The combination with a circuit for transmitting electrical energy for lighting, power or similar purposes by means of a maintained alternating current, of sending and receiving communication circuits applied thereto at separate points, impeding devices connected across the mains of the transmitting circuit and joined at an intermediate point to a communication circuit, communication apparatus in the communication circuit and an impedance interposed between the apparatus and the impeding devices.



NO. 715,546.—GENERATOR OF ALTERNATING CURRENTS.

715,545. Generating Alternating Currents. Charles S. Bradley, Avon, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed June 22, 1896.

An alternating-current generator has a field-magnet circuit including a condenser, a switch for opening and closing the circuit, and a relatively movable co-operating element in inductive relation to the field magnet.

715,546. Generating Alternating Currents. Charles S. Bradley, Avon, N. Y. Original application filed June 22, 1896. Divided and this application filed April 23, 1902.

The method of operating an induction generator whose field magnet is charged by a condenser consists in opening the condenser circuit while the machine is in motion to preserve the condenser charge, and starting the machine by bringing it into motion and then closing the switch. (See cut.)

715,555. Electric Sign. Lucien S. Crandall, Brooklyn, N. Y. Application filed August 30, 1902.

The sign comprises parallel metal plates, means for supporting the plates and for insulating them from one another, lamp sockets in the outer plates in electric contact therewith but insulated from the back plate, devices in the sockets in contact with the back plate, means providing electrical connections to the plates for supplying the current and devices connected to the sockets for designating a letter or numeral by day, the removal of which permits the insertion of electric lamps for designating a letter or numeral, as set forth.

715,625. Process of Obtaining Metallic Aluminum or Other Metals by Electrolysis. Girolamo Taddei, Turin, Italy, assignor to the Societa Italiana di Applicazioni Elettriche, Turin, Italy. Application filed July 17, 1901.

The method consists in separating sodium from its chloride while at a high temperature, by electrolysis, then decomposing the oxide of the metal treated while hot with the chlorine from the first step, whereby a chloride of the metal is formed, and then decomposing the chloride by the hot sodium vapor from the first step, whereby sodium chloride is formed and the metal treated set free, the operation being continuous.

715,626. Apparatus for Obtaining Metals by Electrolysis. Girolamo Taddei, Turin, Italy, assignor to Societa Italiana di Applicazioni Elettriche, Turin, Italy. Application filed December 13, 1901.

An apparatus for the purpose specified in the above patent is described.

715,643. Carbon Guide for Electric Lamps. William J. Deming, Murphysboro, Ill. Application filed July 12, 1902.

A movable insulated guide is slidably mounted upon the side rods and is provided with an aperture for the passage of a carbon therethrough.

715,650. Electrical Massage Apparatus. Oscar A. En Holm, New York, N. Y., assignor of one-half to Homer W. Hedge, New York, N. Y. Application filed March 20, 1902.

Combined with a support comprising a sleeve of insulating material having a closed end are two electrodes rigidly mounted thereon, a circuit-interrupter mounted in the sleeve, and means also mounted in the sleeve for controlling the operation of the circuit-interrupter, the means projecting through one of the electrodes.

715,654. Gravity Electric Battery. Adam M. Friend, Denver, Colo. Application filed June 8, 1901.

A partition is placed horizontally in the jar between the positive and negative elements, and fits its sides to prevent communication between the two compartments around the disk, but permits vertical movement of the disk in the jar for the purpose set forth, the partition being porous and forming a strainer or filter to permit the passage of liquid while straining out the solid particles of matter.

715,677. Electric Roller. Casteran J. Marius, West Hoboken, N. J., assignor to Stephen J. Cox, New York, N. Y. Application filed February 6, 1900.

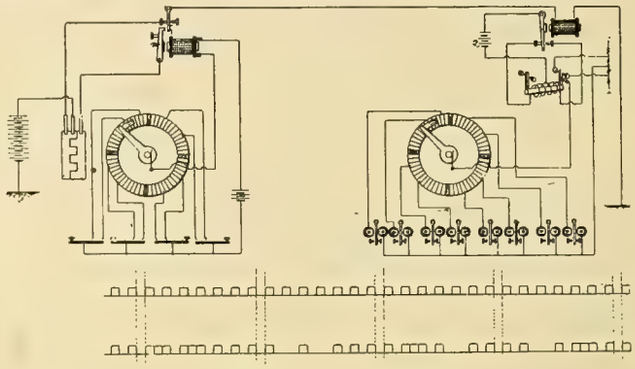
The rotation of the roller in contact with the body is utilized in generating a current of electricity and transmitting the same to the body.

715,683. Electrical Call Bell. William E. McCormick, Chicago, Ill., assignor to the International Telephone Manufacturing Company, Chicago, Ill. Application filed December 16, 1901.

In the bell are combined a ringer frame supporting electromagnetic devices, and an armature plate rigidly secured to the frame at one end and adjustably supported on the frame at its other end.

715,686. Electric Telegraph. Thomas D. Penniman, Baltimore, Md., assignor to the Rowland Telegraphic Company, Baltimore, Md. Application filed January 9, 1902.

An improvement in the transmission of intelligence consists in sending over a circuit a succession of electrical impulses separated by spaces, and substituting spaces for impulses and impulses for spaces in combination, to form the characters of a code. (See cut.)



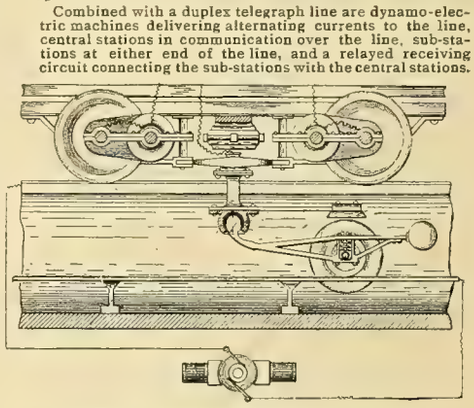
NO. 715,686.—ELECTRIC TELEGRAPH.

715,689. Electrical Switch. Clarence D. Platt, Bridgeport, Conn., assignor to the Bryant Electric Company, Bridgeport, Conn. Application filed August 19, 1902.

An insulating base for an electrical knife-switch has projecting lugs in pairs, with their adjacent faces beveled to form V-shaped grooves.

715,696. System of Telegraphic Distribution. Henrietta H. Rowland, Baltimore, Md., administratrix of Henry Augustus Rowland, deceased, assignor to the Rowland Telegraphic Company, Baltimore, Md. Application filed December 11, 1901.

Combined with a duplex telegraph line are dynamo-electric machines delivering alternating currents to the line, central stations in communication over the line, sub-stations at either end of the line, and a relayed receiving circuit connecting the sub-stations with the central stations.



NO. 715,714.—TROLLEY FOR CONDUIT RAILWAYS.

715,702. System of and Apparatus for Controlling Light Effects. Robert F. Spangenberg, New Orleans, La. Application filed November 18, 1901.

In the apparatus are combined an inclosing casing, an electric light mounted therein, a number of color frames, slidingly mounted in the casing, cords attached to the frames, a rotating shaft, winding drums carrying the ends of the cords mounted on the shaft, and electromagnetically operated mechanism adapted to throw the drums into action to raise the respective frame.

715,714. Trolley for Electric-railway Cars. Louis E. Walkins, Springfield, Mass. Application filed January 9, 1900. Renewed September 20, 1902.

One claim reads: The combination with a slotted conduit, the conductor therein and the truck running on the trackway over the conduit provided with the depending member extended downwardly through the slot in the conduit, of the wheeled trolley in running contact on the conductor and comprising a frame, a portion of which has a ball-and-socket connection with the depending member extended from the truck, and a bar longitudinally and horizontally extended from the member over the trolley. (See cut.)

WESTERN ELECTRICIAN

EVERY SATURDAY.

Vol. XXXI. CHICAGO, DECEMBER 27, 1902. No. 26

Columbus, Buckeye Lake and Newark Electric Railway.

By O. M. Carter.

One of the most interesting and picturesque electric railways in the central part of Ohio is that of the Columbus, Buckeye Lake and Newark Traction Company, extending, as it does, through a beautiful stretch of country with a branch to Buckeye Lake, which has a wealth of beautiful natural scenery about it. Central Ohio is a rich agricultural region, with small pieces of woodland on occasional raises and rugged bluffs along the numerous streams encountered. The line leaves the Columbus Union Depot over the loop, and in crossing Alum Creek passes over a substantially built viaduct. After leaving the city, the road swings north to the national pike, which it follows almost due east for 25 miles to Hebron. It is almost a straight line, and so well has the construction work been done that cars have made a speed of a mile a minute for almost the entire distance. From Hebron the main line extends along the bank of an unused canal to Newark, nine miles distant, and a branch extends to Buckeye Lake, which is 2½ miles away. The lake contains 18 square miles, and has been an outing resort for some time. It was some years ago set aside by the state for public-park purposes, and has been fitted up for picnicking, fishing, boating, dancing and other innocent pleasures.

COLUMBUS, BUCKEYE LAKE AND NEWARK ELECTRIC RAILWAY.—GENERATING PLANT AT HEBRON.

The population of Columbus is now about 150,000, and Newark is a little city of 22,000 people. On the line, between the termini, are Reynoldsburg, Etna, Kirkersville and Hebron, all thriving villages, and made more so by the road itself. The total population along the line is estimated at something like 250,000 people, and the railway is used very largely by people several miles on either side of it.

The history of Columbus is quite well known to all who are interested in traction matters, but the advent of electric roads has worked wonderful changes for the better in the last few years. The business of both the wholesale and retail merchants has shown a very perceptible increase, and there has never been a greater gain in population in the same length of time. The fact that it is the capital city and in the center of the state makes it a natural center for electric-railway enterprises, and those roads which have it for a terminus are quite fortunate. It has a good interurban union passenger depot, and arrangements have just been completed for a freight depot to be used by all the electric roads entering the city. The Columbus, Buckeye Lake and Newark will have the advantage of using both.

Newark is an active manufacturing town, the county seat of Licking County and the home of the Jewett Car Works, as well as many other enterprises of importance. The fact that the town has five flourishing banks is enough to show what it is in a business and industrial way. The business has increased in a most satisfactory way, however, since the electric line was completed. The annual encampment of the Ohio National Guard is held there, and the famous Indian mounds of that locality attract many students and curiosity seekers.

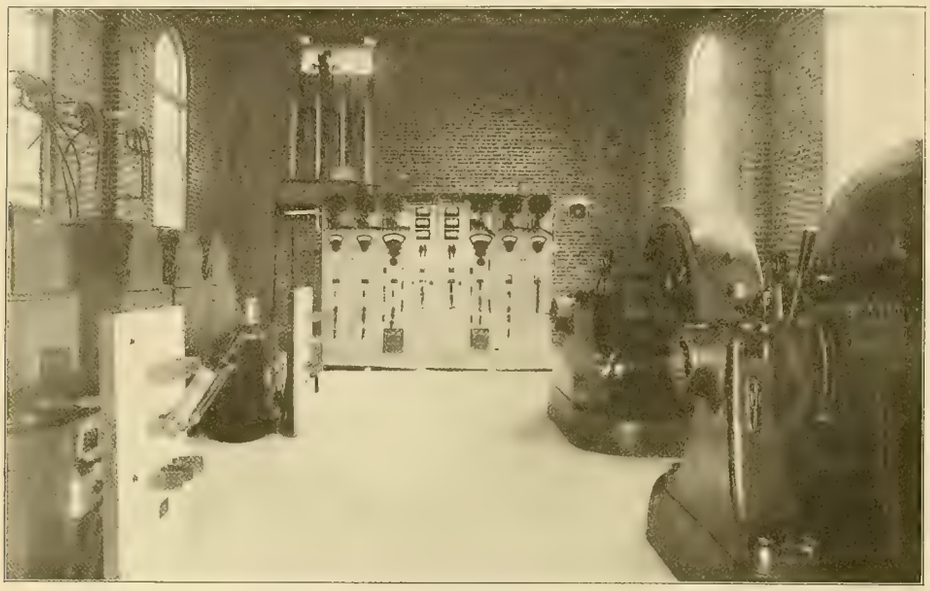
The park at Buckeye Lake has been used for years as a summer resort and place of recreation, but now it will increase its business many fold. Some of its attractions have already been named, but in addition the railroad company has erected a handsome dancing pavilion at a cost of $50,000, and many other improvements have been planned. The company now has about 41 miles of single track betwen Columbus and Newark. In Columbus there are 10,470 feet of single track, all completely paved, in the construction of which nine-inch 107 Trilby rails were used. Newark has 1⅞ miles of track, laid with nine-inch, 90-pound, standard girder rails. The 37 miles of track through the country is composed of 70-pound T-rails, and the switches and frogs are of the steam-railway standard. All rails are laid on standard white-oak ties. Standard six-bolt fishplates are used with the 30-foot T-rails, with one No. 0000 concealed bond for each joint, while with the 60-foot girder rail, a double No. 0000 bond spans the fishplate. The roadbed is made with the usual fill, and six inches of gravel under the ties, and the spaces are filled even with the tops of the ties. It is well ballasted and up to the standard of first-class railroad building. Six steel bridges, from 20 to 156 feet in length, three concrete arch culverts of six-foot span and more than 70 iron or tile culverts of from six inches to three-foot span were required in the construction of the road. All of them are of the best material and workmanship.

Except in the cities and villages, the overhead construction is of the bracket type, with straight, sound and well-set poles, 35 feet long and eight inches at the top, the Richmond Craighead bracket being used. In other places the span construction was used. A No. 0000 grooved trolley wire is employed the entire length of the line, and two No. 0000 copper feed wires are carried on the poles. From the power house at Hebron to the sub-station at Hibernia, 20 miles toward Columbus, a No. 4 copper three-phase transmission line is used.

The power house, built on the canal bank, close to the main track at Hebron, is one of the best built and finest in that part of the country. It is 138 by 118 feet in dimensions, and is built of brick on a striking and rather unusual design. It has a boiler room 40 by 138 feet, an engine room 60 by 138 feet, and coal bins 18 by 138 feet, and is covered by an iron-truss slate roof. The stack is 150 feet high, seven feet inside diameter and is built of radial brick. The machinery proper consists of two 1,250-horsepower, Hamilton-Corliss, cross-compound engines, 26 and 50 by 48-inch, with a speed of 75 revolutions per minute; two 800-kilowatt, 1,300-volt,

three-phase generators, mounted on the shafts of the engines; two 300-kilowatt rotary converters; six 110-kilowatt, air-blast step-up transformers, a 15-panel switchboard, Blake independent condensers, Goubert heaters and other machinery of minor importance. Views in the power house are shown in the accompanying illustrations.

The sub-station at Hibernia, eight miles from Columbus, is a neat little brick building and contains the following equipment: Two 300-kilowatt rotary converters, six 110-kilowatt, air-blast, step-down transformers, seven-panel switchboard and other appliances, all of the latest approved pattern. The electrical equipment in both sub-station and power house is of the General Electric Company's manufacture.



COLUMBUS, BUCKEYE LAKE AND NEWARK ELECTRIC RAILWAY.—INTERIOR OF SUB-STATION AT HIBERNIA.

The rolling stock of the road is of the latest designs in car building and consists of 16 passenger cars, each with toilet room, smoking apartment and water cooler and some with baggage apartments. They are all handsomely upholstered and as finely finished as the parlor cars on a steam road. In detail they are as follows: Four 50-foot Barney & Smith coaches, each equipped with B. and G. trucks, four General Electric 73 (75 horsepower) motors and controllers, Christensen compressor and double-air chambers, Providence fenders and electric headlights; four 62-foot B. & S. combination baggage and passenger cars, with similar equipment; one 60-foot B. & S. parlor car with same equipment, with rich mahogany finish and vestibuled observation platform; five 60-foot Jewett convertible passenger cars, three equipped with two G. E. 73 (75 horsepower) motors each, and the other two to be used as trailers; two 60-foot express cars, each with four G. E. 73 (75 horsepower) motors, with parallel control, and one single-truck snow plow ordered. With this equipment the company is able to handle an enormous passenger business, as well as a good express and freight traffic.

This company now owns the city lines at Newark and the line from Newark to Granville, seven miles, one of the first electric lines built in the state to connect two towns. This latter is to be entirely rebuilt and laid with heavy rails. In all there is 15 miles of the line, and the Jewett Car Works is building four handsome new cars especially for city service. Granville has a population of 3,000 people and is the seat of Dennison University.

Preparations are rapidly being made for the extension of this line from Newark to Zanesville, although this will be done under another corporate name, but with the same persons interested. The right-of-way through the country has all been secured and the surveys completed. Only a few days ago A. E. Appleyard was in Zanesville making arrangements to secure a franchise in that city, with very satisfactory progress reported. This, it is said, will complete the franchise matter, and they will be ready for the construction work. Zanesville is a very prosperous manufacturing town of 35,000 inhabitants and will make an excellent eastern terminus for the Appleyard system. The construction work on this line will be fully up to the standard of the Columbus-Newark road, and through trains will be run when it is completed.

The Columbus, Buckeye Lake and Newark is an Appleyard road, and J. R. Harrigan is the general manager. He is a comparatively young man and yet he has had large experience in the management of electric railways. His most valuable schooling was with the Chippewa Valley electric road, which he took hold of as a mule line, doing an unprofitable business, and left as a fully equipped electric road making money. For a year he was manager of the Dayton, Springfield and Urbana road, and last March he assumed his present position, completing the road and putting it in operation.

The road is operated in a very systematic order and with the precision that governs the running of railroad trains. A rate of about 1½ cents a mile is charged, the rate between Newark and Columbus being 60 cents one way and $1 for a round trip. In addition, the Appleyard roads issue 500 and 1,000-mile books, good over the Columbus, Buckeye Lake and Newark, the Columbus, London and Springfield, Dayton, Springfield and Urbana, Dayton and Lebanon, the Columbus and the Grove City and Southwestern roads. These books will ultimately be good over other lines, either proposed or under construction. The books sell for $6.25 and $12.50, respectively, or at the rate of 1¼ cents per mile. They are made out in the name of the purchaser, but the coupons are accepted from anyone presenting them.

Institute Branch in Cincinnati.

A local branch of the American Institute of Electrical Engineers has been formed at Cincinnati. The movement was inaugurated by F. G. Bolles and the first meeting was held in the officers' dining-room at the works of the Bullock Electric Manufacturing Company on Wednesday evening, December 17th. Eleven members were present, and after forming a temporary organization and discussing the different phases of the subject for some time, R. T. E. Lozier was elected chairman and L. E. Bogen secretary of the permanent organization. It is the intention to discuss papers presented at the New York meeting, as this will be feasible, owing to the fact that the local meeting will be about three weeks later than the one held in New York.

Mr. Bolles handed in 10 new applications for membership and stated that at least 10 more would probably be secured before January 12th, the date of the next Cincinnati meeting.

The new Aurora (Ill.), Rockford and De Kalb railway recently paid the city treasurer of Aurora $10,000, which is the amount due the city for the trolley company's franchise, granted last May. This is the first time that a cash consideration for a franchise has ever been obtained by the town.

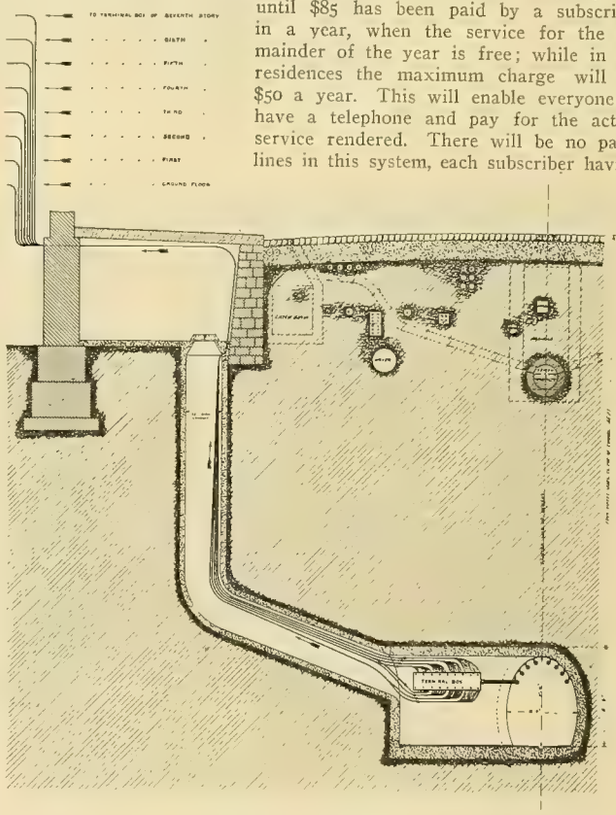
Progress on Telephone Tunnels in Chicago.

The work on the telephone tunnels, building under the streets of Chicago by the Illinois Telephone and Telegraph Company, steadily progresses. The most recent development in that enterprise is a petition by the company asking the city for permission to extend the tunnels to and throughout a large section of the West Side. The petition brought up an interesting point of law, and, says Commissioner of Public Works Blocki, will have to be decided before the city will grant the telephone company any further rights. It is the question as to whether a telephone tunnel is a conduit or not. On this account the West Side petition is, for the present, held in abeyance.

The most recent exposition of what the telephone company has been doing is given in the following extract from an address delivered before the Chicago Academy of Sciences by the company's operating engineer, George W. Jackson: "The Illinois Telephone and Telegraph Company has constructed 14 miles of tunnel under the streets of the business section of Chicago to carry its telephone and telegraph wires. Its plan is to give to the people of Chicago an automatic telephone system at the lowest possible cost. We intend to place in every office, business establishment and residence one or more of our telephones connected with a meter which will accurately register the amount of the service furnished, on the same principle as the gas meter registers the gas used by the consumer.

"The magnitude of this company's exchange will be better realized when it is understood that there are about 150,000 gas meters in Chicago. It costs as much to install a gas meter on the premises as to install a telephone, and there certainly is a demand for a telephone wherever a gas meter is used. Many more telephones would be used if the cost to the subscriber were made low enough.

"The value of the telephone is in the number of subscribers and the efficiency of the service. This company realizes this fact, and will therefore place its telephones with its subscribers the same as the gas company places its meters, making no charge and asking no guarantee from the subscribers, except to pay the company five cents for each outgoing call until $85 has been paid by a subscriber in a year, when the service for the remainder of the year is free; while in the residences the maximum charge will be $50 a year. This will enable everyone to have a telephone and pay for the actual service rendered. There will be no party lines in this system, each subscriber having a metallic-circuit telephone connected with an automatic switchboard.



TELEPHONE TUNNELS IN CHICAGO.—CROSS-SECTION SHOWING CONNECTIONS WITH BUILDINGS.

"It is our intention to bring 200 pairs of cables from the switchboard to a point accessible to the cable and wire shafts built in the different buildings for the purpose of placing wires and cables for the accommodation of the tenants. At this point, a three-foot sub-conduit lateral [shown in the accompanying illustration] will be built, running from the six feet by seven feet six inches lateral conduit to the space between the area wall and the building.

The sub-conduit will be constructed to about 18 inches above the surface of the basement floor, a sealed cover being placed over the conduit. In this three-foot conduit it is our intention to carry a system of 25 or 50 pairs of separate lead-covered cables. These separate 25 and 50 pairs of cables are to run to each floor of the building. From the cables, the wiring for the telephones will be done. With a system of this kind the likelihood of a telephone being out of service for any length of time is reduced to the minimum, as any trouble which might occur in the wiring or cable system would be readily detected. Also by wiring the buildings in the manner described, we are providing for the future growth, thereby preventing unnecessary annoyance to tenants and owners of buildings.

"There is one other annoyance that the public will be saved by our system, and that is the continual tearing up of our streets. This will be beneficial to the public as well as the company, saving a large outlay for maintenance after the conduit system is constructed. This same principle will be carried out in the entire exchange, and a sufficient number of cables will be put in so that the future needs of the system can be met without unnecessary expense or delay."

Third-rail Contact as Affected by Sleet and Ice.

Recent snow and sleet storms in New York city precipitated the Manhattan Railway Company into all kinds of difficulties with its newly installed third-rail system on the elevated roads. Owing to the company's inability or neglect to equip its cars with proper apparatus for keeping the third rail free from ice and snow, its elevated system was, practically speaking, put out of business for a considerable number of hours. The possibility of such interruption of service has raised the question whether some practicable method is not at hand to guarantee at all times and under all conditions of weather, a sure and thoroughly good contact with the third rail. Seeking an answer for this important question, a representative of the Western Electrician consulted officers of the different elevated electric-railway systems of Chicago with the results given.

Mr. H. M. Brinkerhoff, manager of the Metropolitan West Side Elevated Railway Company, said: "Yes; we did have trouble with our third-rail contact, but that is a thing of the past for us now. We feel absolutely certain that no sleet or rainstorm, no matter how severe, can tie up our system. Our scheme employs four steel brushes to a truck, or eight to a car. These brushes are made of steel

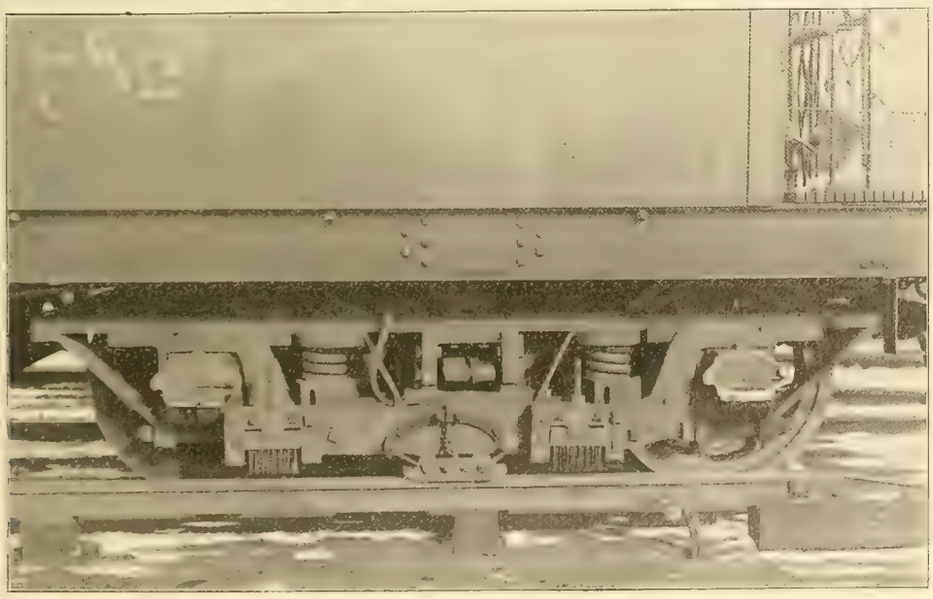


FIG. 1. THIRD RAIL CONTACT SHOE AND STEEL BRUSHES USED ON METROPOLITAN WEST SIDE ROAD IN CHICAGO.

'bristles' and will stand a heavy pressure without becoming damaged. Each contact shoe is protected by two of these brushes, one placed in front of it and one behind it. [This arrangement is shown in Fig. 1.] The motorman or conductor on a car can lower as many of the brushes as he pleases, depending upon the necessity of the occasion. One, two, three or four may be brought into service, and if all four fail in producing the desired affect, a hand scraper is put into service which cannot fail."

This handscraper, as described by Mr. Brinkerhoff, has a long handle, so that it may be operated from the moving car. Each car carries one of these scrapers at all times. A man stands on the front of the car and holds the scraper in contact with the third rail just in front of the contact shoe. Mr. Brinkerhoff positively asserts that there is no coating of ice so hard that this scraper will not thoroughly remove it. In speaking of the hand scraper, he said that it's services had not been required during the last three years, as it was only under the most adverse circumstances that the brushes would fail to take care of the contact.

When asked concerning the most difficult ice to be removed from a rail, the manager of the Metropolitan company described the following conditions: "Suppose," said he, "we have had a night of cold weather, with the temperature down to 18 or 19 degrees above zero, perhaps, and the third rail and all surrounding material has become thoroughly chilled and frosted. Now, suppose that toward morning the weather warms up to about freezing and a rain sets in. The instant the rain strikes the third rail, it is frozen into a solid 'enamel-like' ice, and no steel brush made will remove it thoroughly enough to insure good contact. Then it becomes necessary to resort to the hand scrapers. Don't mistake me, however, and infer that we could not continue service without the hand-scraper. We could do so, but it would not be profitable or satisfactory."

A question was then asked concerning the use of oil, as proposed by the Manhattan Railway Company. Mr. Brinkerhoff spoke as follows: "Yes; we tried oil, and it is fairly successful when one is dealing with sleet, providing the approach of a sleet storm is accurately and positively foretold. On the other hand, if we covered our third rail with oil and the storm did not favor us with its presence, we discovered that Chicago's dust would take its place, and as a result, the contact rail and shoe were soon covered with a gummy paste which acted as bad, if not worse, than ice. A continual sputtering occurred and holes were burned in both the shoe and rail. For this reason we abandoned the use of oil, and I imagine the Manhattan will have to do so likewise."

Garrett T. Seely, engineer of maintenance of way for the South Side Elevated Railroad Company, gave the following in regard to the third-rail problem: "We use steel brushes, the steel bristles being three to four inches long. Four of these brushes are placed on the two trucks of each car, so that the two contact shoes on one side of the car are between the brushes. In this way a contact shoe is always preceded by a rail cleaner. This scheme works all right under ordinary circumstances but fails when a severe test is put upon it such as would result from a heavy sleet storm. I am considerably in doubt as to whether any apparatus has been devised so far that will insure a good and sure contact, under all conditions of weather. Mr. Hopkins (general manager of the company) remarked to me the other day, that if I could invent a successful apparatus for clearing the third rail of sleet and ice, my fortune would be made. Judging from this remark, I take it he is of much the same opinion as myself concerning the existence of an absolutely sure rail cleaner. We have not been in very much trouble but once in the last two years, and that was one day last winter. A heavy sleet storm had continued all night, and the next morning we found quite a bit of difficulty in getting our trains out of the yards. Salt was brought into service and helped us considerably. Once on the road we found no difficulty in keeping the rail fairly well cleared on account of the frequency of the trains."

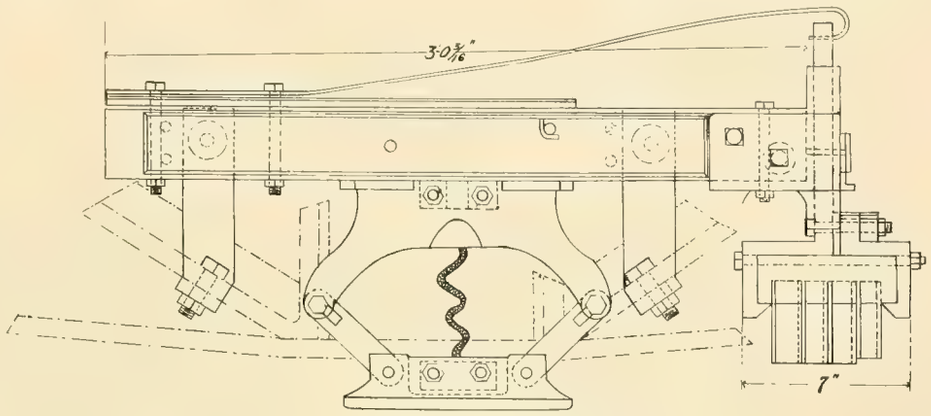

FIG 2. HEDLEY THIRD-RAIL SCRAPER.

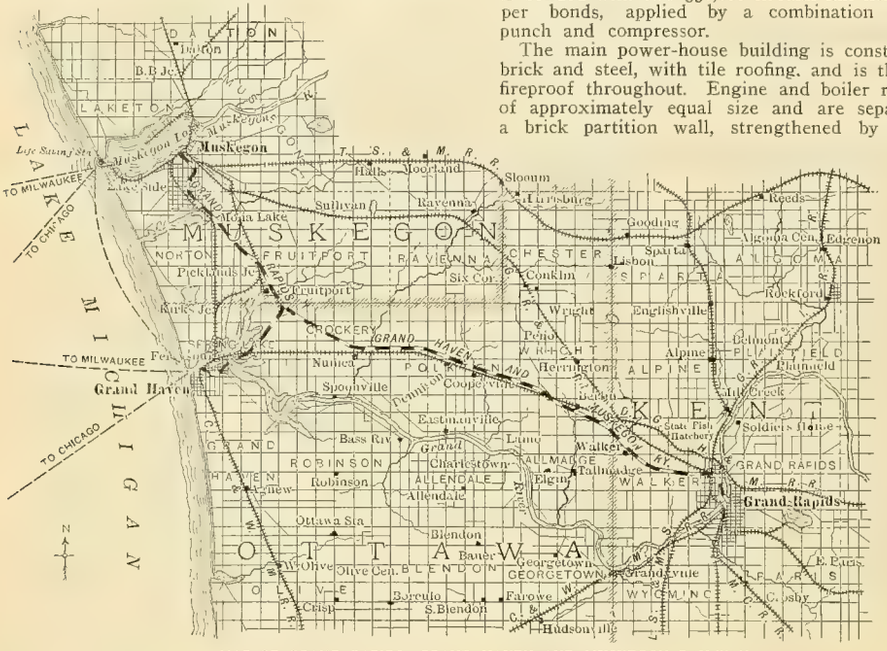
After having heard the remarks made by Mr. Seely, it was with considerable curiosity that the opinion of Frank Hedley, general superintendent of the Northwestern Elevated Railroad Company, and of the Lake Street Railroad Company, was sought. When asked whether his roads would be interfered with by a heavy sleet storm, Mr. Hedley gave the following answer: "No, sir; not by the worst sleet storm that Chicago or any other city ever saw. I will positively state that we can keep our cars in operation, and on schedule time, through any kind of a storm. Further, we do not employ any hand scrapers at all. Our apparatus is entirely automatic, and it keeps the third rail entirely clear of all ice, sleet or snow. The Western Electrician described my patent last May, hence I need not give you any detailed account of its method of operation. The apparatus has successfully taken the Lake Street system through three winters already and the Northwestern through two. On that account, I feel not the slightest hesitancy in making so positive an assertion, for I know that the apparatus will bear it out."

The scraper which Mr. Hedley referred to is shown in Fig. 2. As he says, this apparatus was described last May by the Western Electrician, but, for the purpose of the present discussion, the following details are given here: The scraper is made up of steel plates set into a steel block. These plates are set vertically, as shown in the cut, but they are turned at an angle in the vertical plane, so as to more easily remove obstructions from the rail; that is, the flat surfaces of the plates do not set perpendicular to the direction of motion. The scraper is self-regulating and automatic in its operation, and in its normal position rides upon the third rail. It may be raised, however, at the discretion of the motorman. The scraper is pressed down upon the rail by means of a long spring, as may be seen in the cut. This spring allows the scraper to accommodate itself to any unevenness in the rail. When one set of plates has worn away, the block can be easily and quickly removed and a new one put in its place. The patent on this scraper was granted to Frank Hedley on February 25, 1902.

The above opinions give one a pretty clear idea of the situation in Chicago, where the third-rail system was first put into operation on elevated railroads. Mr. Hedley and Mr. Brinkerhoff have both had much experience in this particular work. Mr. Seely has only been connected with electric railway work for a year, and his opinion was based more particularly on Mr. Hopkins' views and on what had been done on the South Side system since he accepted his position with that company.

Grand Rapids, Grand Haven and Muskegon Railway.

One of the recently completed interurban electric railways in the West is the Grand Rapids, Grand Haven and Muskegon Railway. This road is representative of high-grade construction, embodying the results of much valuable experience obtained during the course of the construction of similar railway properties. The main line is approximately 35 miles in length, and extends from Grand Rapids, the western metropolis of Michigan, to Muskegon, a thriving manufacturing city of 30,000 inhabitants,



MAP OF GRAND RAPIDS, GRAND HAVEN AND MUSKEGON RAILWAY.

situated on the shores of Muskegon Lake and Lake Michigan. A branch line extends eight miles in a southwesterly direction, connecting Grand Haven Junction, on the main line, with the summer resort at Spring Lake and with Ferrysburg and Grand Haven. The latter is a manufacturing city of 5,000 inhabitants, located near the lake shore, and both Grand Haven and Spring Lake are excellent locations for summer residences.

The railway closely approximates the steam railroad, both in territory served and quality of equipment. The road was designed for passenger, express and local freight business. Not the least important item in the acquisition of a passenger business is the improvements which have been undertaken for the purpose of converting Spring Lake into a desirable summer resort. Although the cars of this road will stop at any convenient location for passengers, it has been the endeavor to localize passenger and freight business as far as possible, and to this end nine stations have been erected along the line of the route. These are combination passenger and freight stations, with the exception of those at Walker and Coopersville, which have an independent compartment for the reception of substation machinery.

The permanent way has been located with exceptional care, avoiding all severe grades and sharp curves, and provides a route between the main termini more direct, by one and 17 miles, respectively, than those afforded by the two existing steam roads. No attempt has been made to follow the highways, and the road operates upon a private right-of-way for the entire distance, with the exception of short stretches through some of the larger towns, where the highway is traversed. The main line is single track throughout and sectioned by frequent turnouts. The track proper is constructed of 70-pound standard T-rail, double-bonded, standard cedar ties and gravel ballast. Spring frogs and long-point switches are provided at all turnouts, which are all of the single-curve or through-line type. Grade crossings have been avoided, and all railroad tracks are spanned by steel bridges of special design. The earthwork bridge approaches are extended for some distance back, for the purpose of securing an easy grade for the interurban cars.

Not the least interesting feature of this road is the employment of the third rail instead of the trolley or overhead system of distribution. Through several towns and cities, where third-rail crossings are impracticable, short sections of overhead have been erected, but, outside of termini, these aggregate less than 2,500 feet in length. The third rail used is 65-pound standard T section, and is mounted upon reconstructed granite insulators. These are bolted to every fifth tie, which is of extra length for this purpose. The rail tread is approximately six inches above and 19 inches distant from the outer rail. At all highway intersections the crossing is protected by cattle-guards and the third rail is broken, suitable wood approach blocks being attached to the free ends, to allow passing contact shoes to regain their bearings without undue shock. The two sections of the third rail are connected by two 250,000-circular-mil copper cables, securely bound to the rail web and carried beneath the crossing in a creosoted wood-pipe conduit filled with pitch. This method of insulating the third rail has proven entirely satisfactory, and the leakage therefrom during wet weather is unnoticeable. The bonds used on the track rails are crimped copper-web bonds with solid heads expanded into a reamed hole by a screw compressor, and are entirely concealed underneath the splice plates, two bonds being provided at each joint, in order to avoid pinching by the splice bar. The third rail is bonded with two 350,000-circular-mil flexible copper bonds, applied by a combination hydraulic punch and compressor.

The main power-house building is constructed of brick and steel, with tile roofing, and is thoroughly fireproof throughout. Engine and boiler rooms are of approximately equal size and are separated by a brick partition wall, strengthened by pilasters. The boiler room is provided with a monitor and skylights for purposes of light and ventilation, which, in the engine room, are accomplished by skylights and ventilating hoods in the roof. Floors are entirely of concrete, that of the engine room being arched between supporting beams to provide for a basement for the accommodation of cable work and pumps of the condensing system. Coal is brought in upon an elevated coal siding paralleling the boiler room. The tracks are mounted upon a masonry and steel supporting structure, beneath which are concrete-lined storage bins of 500 tons' capacity. These bins are accessible from the boiler room through openings in the wall directly opposite each stoker.

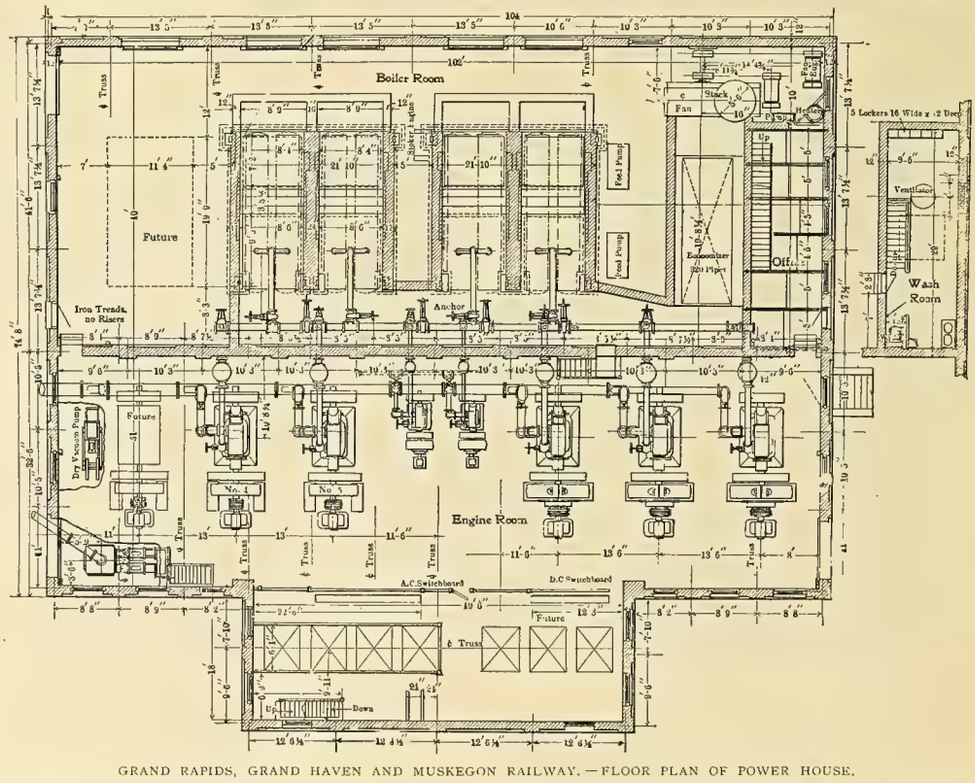
Four 250-horsepower vertical-header Babcock & Wilcox water-tube boilers furnish the steam supply of the plant, at a pressure of 160 pounds, provision having been made for a future battery. The boilers are fitted with Roney mechanical stokers, which are driven by small Westinghouse standard engines located between the boilers, and are supplied with coal by direct shoveling from the storage bins. The waste gases discharge into a brick and steel flue in the rear of the boilers, thence successively through an improved circulating-type economizer, vertical tandem exhaust fans, uptake and a short steel stack, extending about 15 feet above the roof.

Provision has been made in the engine room for six 250-kilowatt main generating units, of which five have already been installed. These units consist of 18 and 30 by 16-inch Westinghouse vertical-compound condensing engines, direct-connected to 250-kilowatt Westinghouse generators, two of which are 390-volt, three-phase alternators and the remaining three double-current machines, furnishing both 650 volts direct and 390 volts alternating current. The grouping of the machines places three units of each kind on each side of the center of the engine room, where are located two 37½-kilowatt exciters, direct-connected to Westinghouse compound engines, running upon the condensing systems.

The electrical equipment other than the generators is entirely contained in a fireproof wing, adjoining the engine room and symmetrical about its transverse center line. In the opening provided by the absence of the dividing wall are located the two main switchboards, which are placed directly upon the wall line, thus preserving the rectangular shape of the engine room. Behind the switchboards is installed all high-tension apparatus. In the basement is the transformer vault, which will eventually contain seven 400-kilowatt Westinghouse oil-cooled transformers, four of which are at present installed, one as a reserve only. These are delta-connected and raise the bus pressure of 390 volts to a line pressure of 16,600 volts for transmission. On the first floor of the transformer room is located the entire high-tension switching apparatus. The high-tension switches are of the Westinghouse pole-fuse type, and are operated from a low wooden insulating platform for security against accidental shock. Above these switches is the lightning protective apparatus, mounted upon heavy marble panels and connected with static interrupters upon the main floor. The transmission wires lead directly from these panels through heavy glass insulating wall tubes to an anchorage outside of, and secured to, the wall and thence to the line. All connections between transformers, switches and arresters are of lead-covered cable, with heavy rubber insulation.

The low-tension board is divided into alternating-current and direct-current sections, erected upon either side of the center line of the transformer wing. One board contains 550-volt direct-current apparatus only, and controls the direct-current side of the double-current generators, the 125-volt exciters and the local feeders, while the other board controls the alternating-current machinery and transformer primaries. The boards are of Westinghouse design and embody the latest types of indicating and recording meters, quick-break switches, circuit-breakers, time-limit relays and synchronizing apparatus. The generating machinery operates in parallel, the units being synchronized by the control of the engine throttle and the indications of a round-dial synchroscope. A complete system of compressed-air piping and storage tanks provides four 62-foot B. and S. combination baggage and B. and S. parlor car; same equipment, with rich efficient means for cleaning the electrical apparatus.

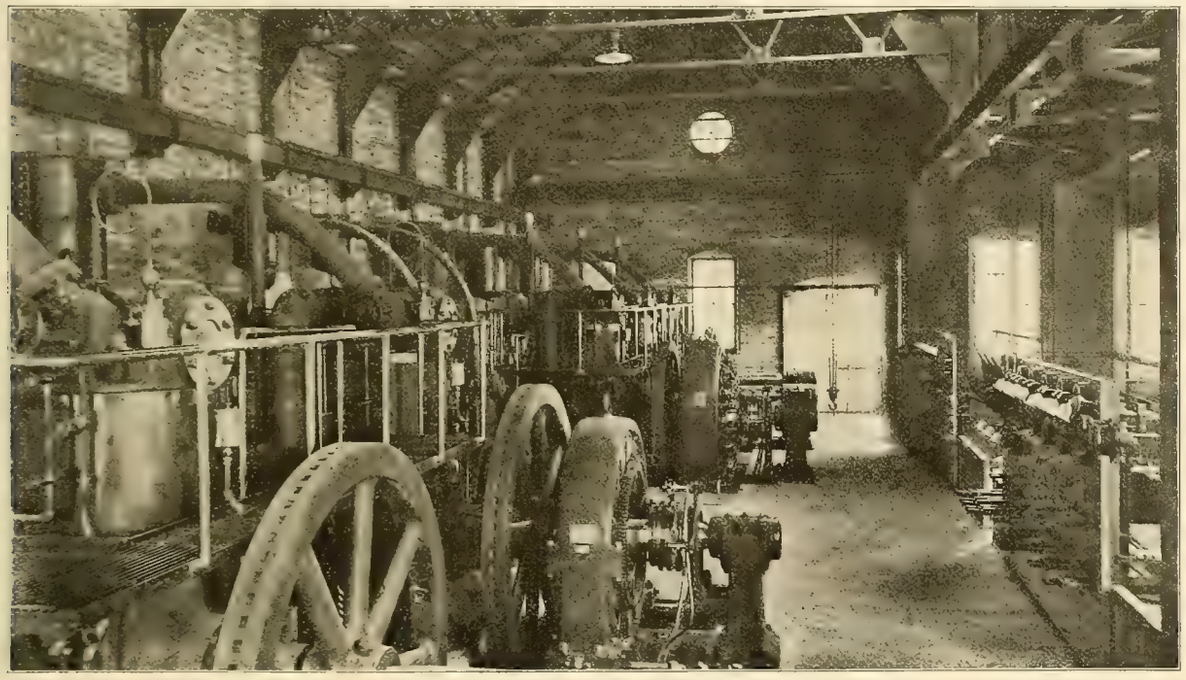
The distribution system is supplied with power from three points, viz., the main station and the two



GRAND RAPIDS, GRAND HAVEN AND MUSKEGON RAILWAY.—FLOOR PLAN OF POWER HOUSE.

sub-stations. The district near the power house is supplied from the direct-current side of the double-current generators, while the sub-station rotaries feed the remainder of the line.

The two sub-stations at Coopersville and Walker are, respectively, 12 and 22 miles distant from the power station at Fruitport. They are combination passenger, freight and sub-stations, and are constructed and equipped along the same general lines as the power station. Each station is provided with a fireproof high-tension tower, in which is isolated all high-tension apparatus in the same consecutive arrangement as that employed at the main station. This arrangement evidently permits the use of a much lower building than would otherwise be possible, and adds largely to its attractiveness. Fifteen thousand-volt current is led into the sub-station towers from the transmission line through heavy glass wall tubes to the high-tension fuse switches, which are mounted upon the wall of the tower, within easy reach of an operator standing upon the elevated high-tension gallery. The current then passes through openings in the concrete floor to a bank of bayonet switches, thence continuing to the transformers resting on the ground floor of the station. The bayonet switches were provided for the purpose of isolating a defective or damaged transformer. The employment of the delta connection of transformers admits of this without



GRAND RAPIDS, GRAND HAVEN AND MUSKEGON RAILWAY.—INTERIOR OF ENGINE ROOM.

disturbing the operation or phase relation of the line, the remaining two transformers being able to carry the increased load for a limited period. Lightning protection is identical with that of the main station and is completely isolated inside the high-tension tower. Each sub-station equipment comprises two 250-kilowatt rotaries, with starting motors, three 200-kilowatt, oil-cooled lowering transformers and a six-panel white marble switchboard.

As in all work of this character and magnitude, the train sheet has been the basis of all determinations for locations of stations, power equipment and line conductors. Owing to the use of the third rail for the major part of the distance, no extra copper feeders were necessary, the rail having ample cross-section to carry the entire current. Where bracket or span-wire overhead construction was necessary, 500,000-circular-mil aerial feeders and No. 0000 B. & S. hard-drawn grooved trolley wires were provided.

The main transmission line is carried upon 30-foot cedar poles, set six to seven feet in the ground, and is provided with a single-braced crossarm, which supports two of the three wires. The third wire, forming the apex of an equilateral triangle, 28 inches upon a side, is supported by a special "ridge-iron" pin, mounted upon the pole top. Proper line insulation is secured by five-inch umbrella-type porcelain insulators. All poles carrying both trolley and high-tension wires are five feet longer than the regular 30-foot high-tension poles, in order to prevent possible contact of the trolley with a live high-tension circuit. Brackets are constructed of two-inch steel pipe, with malleable fittings, upper truss rod and steel span wire carrying a single "round-top" straight-line hanger.

The telephone system has been installed with the greatest care and embodies the most substantial construction. In the open country, telephone wires are carried at a height of 14 feet upon a line of 20-foot poles, where no transmission line runs, and upon the high-tension pole line within the transmission district. The circuit is metallic, of No. 8 B. & S. hard-drawn copper, and at all sidings taps are brought down to waterproof jacks, conveniently located upon the pole for purposes of telephonic connection. Interference from alternating-current induction, in both high-tension and telephone lines, is prevented by transposition of leads at regular intervals, and lightning protection is all concentrated at the stations, none being applied along the line of route on account of the difficulty of maintenance.

The rolling stock comprises 15 52-foot Barney & Smith passenger coaches, three 40-foot express cars and one construction car, furnished with tools, snow-plow and a motor-driven winch. The passenger cars contain 28 double, non-reversible seats, upholstered in red plush, and are finished in white oak and holly, with plate-glass windows, doorlights and bulkheads. A smoking compartment is provided in the front part of the car, which is ventilated by a suction draft induced during motion of the car by the curvature of the front vestibule. Electric heaters are provided throughout. A complete telephone set on every car enables the conductor to obtain instant communication with the despatching station by means of flexible cord and plug which fits into the telephone jacks located at all sidings and stations. Special pole connections are also provided on all cars, so that in the event of accident or disablement at any point on the line, telephonic communication with the despatcher may be had at once from the car.

Passenger cars are equipped with two 150-horse-power Westinghouse No. 50-C. motors, both applied to the rear truck by Gibbs' suspension. Trucks are of the M. C. B. type, built by the Baldwin Locomotive Works, and driving wheels are steel-tired, while those of the leading truck are spoked wheels with chilled treads. Express cars are similarly equipped with two Westinghouse No. 76 motors. The construction car has one No. 76 motor per axle, aggregating 300 horsepower in addition to the winch motor. This equipment enables the car to make emergency runs and perform all kinds of heavy duty such as wrecking, hauling gravel cars, pile-driving and snow-plow work.

All cars are equipped with Westinghouse air brakes, supplied by type-D motor-driven, reciprocating air compressors, placed under the car body and controlled from the vestibule.

Cars are dispatched by telephone from a station located at Fruitport. They operate at an average cross-country speed of 35 miles per hour, with a headway of 30 minutes. Lay-overs of six to 10 minutes at termini and car barns are provided in the schedule, allowing ample time for making reports, inspecting wheels and journals, filling sand boxes, etc. Express service is as yet seriously delayed by the lack of terminal facilities, but it is expected that regular express service will be started in the near future.

The Grand Rapids, Grand Haven and Muskegon commenced operation in the early part of the year and has been uniformly successful in establishing a permanent and lucrative traffic throughout its territory. Although greatly handicapped by the lack of suitable terminal stations, the road at once placed itself upon a dividend-paying basis, thus demonstrating the wisdom of thorough construction. The road was located, designed and constructed throughout by Westinghouse, Church, Kerr & Co., and represents their latest practice in the railway field.

The Elgin, Aurora and Southern Traction Company's books show the following figures for the month of November: Total gross earnings, $33,542; net earnings, $12,469; net income available for dividends, $4,135.

American Association and Physical Society Meetings.

The annual meetings of the American Association for the Advancement of Science and of the American Physical Society will be held jointly in Washington, D. C., from December 29th to January 3d. Sessions of Section B, Physics, of the American Association, will begin on the opening day. On Wednesday, December 31st, the annual business meeting of the American Physical Society will be held, and on that day the programme will consist of papers from members of this society. The meetings will be held in the chemical lecture room of the main building of Columbian University. The headquarters of the American Association will be at The Arlington. Special railroad rates are offered, and a large and successful meeting is anticipated. Dayton C. Miller of the Case School of Applied Science, Cleveland, Ohio, is secretary of Section B of the American Association, and Ernest Merritt of Cornell University, Ithaca, N. Y., is secretary of the American Physical Society.

An advance list of papers to be read shows nearly 50 titles, and this will probably be added to. Among the papers the following are noted: "The Construction of a Sensitive Galvanometer," by C. G. Abbott, Smithsonian Institution, with an introduction by S. P. Langley, Smithsonian Institution; "Results of Comparisons of Magnetic Instruments," by L. A. Bauer, United States Coast and Geodetic Survey; "The Condition Governing the Coherence of Metals When There Is an Electrical Discharge Between Them," by Carl Kinsley, University of Chicago; "A Determination of the Frequency of Alternating Currents by the Automatic Adjustment of the Circuit to Resonance," by Carl Kinsley, University of Chicago; "On Methods of Measuring Radiant Efficiency," by E. L. Nichols and W. W. Coblentz, Cornell University; "The Infra-red Spectrum of the Mercury Arc," by W. C. Geer and W. W. Coblentz, Cornell University; "A High-tension Electrical Coil," by G. Lenox Curtis, New York city; "Experiments Concerning Very Brief Electrical Contacts," by Herschell C. Parker, Columbia University; "The Magnetic and Electric Deviation of the Easily Absorbed Rays from Radium," by E. Rutherford, McGill University; (Title to be announced), by R. H. Thurston, Cornell University; "Induced Radio-activity Excited at the Foot of Waterfalls," by J. C. McLennan, Toronto University; "Radio-activity of Freshly Fallen Snow," by S. J. Allen; "The Damped Ballistic Galvanometer," by O. M. Stewart, University of Missouri; "On the Electrical Conductivity of Solutions in Amyl Amine," by Louis Kahlenberg, University of Wisconsin; "Relations Between Science and the Patent System," by Charles K. Wead, United States Patent Office; "Why Does the E. M. F. of a Daniell Cell Change When the Density of the Solutions Change?" by Henry S. Carhart, University of Michigan; "Absolute Measurement of the E. M. F. of the Cadmium Cell," by Henry S. Carhart and Karl E. Guthe, University of Michigan; "On the Double Refraction of Dielectrics in a Magnetic Field in a Direction at Right Angles to the Lines of Force," by D. B. Brace, University of Nebraska; "A Lecture Room Method of Analysing Irregular Electric Currents," by W. J. Humphreys, University of Virginia; "A Note on Arc and Spark Spectra," by Charles E. St. John, Oberlin College.

Two City Electricians Wanted.

Under date of December 16th a Canadian correspondent of the Western Electrician writes: "The city of Toronto is about to appoint a first-class electrical engineer at a good salary, whose duty it shall be to look after all the electrical companies operating in the city. This is being done on the recommendation of City Engineer Rust."

Alderman Woodson of the Kansas City (Mo.) Common Council has prepared an ordinance, to be submitted to the council, which provides for appointment by the mayor of a city electrician, whose duty it shall be to inspect and pass on all wiring done in the city. The position is to pay $2,000 a year and an additional amount of $1,000 is to be allowed as salary for an assistant who shall be chosen by the city electrician himself. The same ordinance fixes the fees to be charged for inspection as follows. Arc lamps, $1; electric motors, $1; incandescent lamps, one to 10, $1; incandescent lamps, 11 to 25, $1.50; incandescent lamps, 26 to 50, $2; incandescent lamps, 51 to 100, $3; each additional 100 or part of 100, $3. A special committee has passed favorably on the ordinance.

WESTERN ELECTRICIAN

EVERY SATURDAY.

PUBLICATION OFFICES:

510 Marquette Building, - CHICAGO.

TELEPHONE MAIN 1746.

Eastern Office, 193 Times Building, New York.

Trade Supplied by Western News Co.

COPYRIGHT.—Not only the title but the *entire contents* of each number of the WESTERN ELECTRICIAN are copyrighted This paper is entered at the Chicago postoffice as mail matter of the second class.

SUBSCRIPTION, in advance, postage prepaid, $3.00 for a full year of 52 numbers; in clubs of four or more, $2.50, with free extra copy for eight subscriptions; foreign countries, $5.00 a year; single copies, 10 cents. When change of address is requested, the **old address** as well as the new should be given.

CORRESPONDENCE relating to electricity or any of its practical applications is cordially invited, and the co-operation of all electrical thinkers and workers earnestly desired. Clear, concise, well written articles are especially welcome; and communications, views, news items, local newspaper clippings, or any information likely to interest electricians, will be thankfully received and cheerfully acknowledged.

ADVERTISING.—THE WESTERN ELECTRICIAN—**the only general electrical paper published in the West**—thoroughly covers a territory *exclusively its own.* THIS IS A CLAIM WHICH CAN BE MADE BY NO OTHER ELECTRICAL JOURNAL IN THE UNITED STATES. Electrical merchants and manufacturers *desiring western trade* will appreciate the UNEQUALED VALUE of this journal as an advertising medium in its special field. Advertising rates are moderate, and will be furnished on application.

DATES AHEAD.

Master mechanics of street-railway companies (meeting for organization), Cleveland, O., January 12, 1903.

Northwestern Electrical Association, Pfister House, Milwaukee, Wis., January 21, 22 and 23 1903.

CHARLES LAMB, in one of his essays, written in the leisurely days of sailing ships, descants in his whimsical fashion on his Now as contrasted with the Now of a correspondent at the Antipodes. Similarly, an editor sometimes experiences regret that his Now anticipates by a space of time varying from a few hours to several days, or weeks perhaps, the Now of the reader. Thus, on the eve of Christendom's great holiday, the desire is strong within us to wish every reader of the Western Electrician a very Merry Christmas, but when these lines are published Christmas will have passed and wishes in relation to it will be in vain. However, there is still ample time to express the hope that all and singular to whom these presents may come may enjoy a Happy New Year, and this we do with a right good will.

Now that the Chicago City Council has the proposed municipal-ownership law in relation to street railways before it, the actions of that body seem to indicate that it does not know what to do next. The subject came up for discussion at the meeting held on Monday of this week. Several substitutes for or amendments to the proposed statute submitted by Alderman Finn's committee were offered, showing that the aldermen were not very enthusiastic over the measure as a whole, although no member of the council had the courage to arise in his place and combat public ownership on principle. Finally, after considerable discussion, further consideration of the subject was deferred until the next meeting, to be held on January 5th. After the vote in favor of municipal ownership at last spring's election in Chicago, it is probable that the aldermen will recommend to the Legislature the passage of the bill providing for the municipal ownership of street railways and possibly of gas and electric-light plants also, but just what form the proposed bill or bills will finally take, and the subsequent action of the Legislature, are matters for conjecture.

FEW more important subjects can engage the attetion of the electric-railway manager than that of braking. With the steady increase in size and weight of motor cars and the great extension of interurban electric railways, it is obvious that the necessity of providing means of keeping the cars under perfect control has grown in corresponding ratio. The American Institute of Electrical Engineers has done well, therefore, to devote a meeting to the discussion of this vital topic. As will be seen by the comprehensive abstract of the proceedings of the meeting in New York last week, presented elsewhere in this issue, two excellent papers were presented. One, written by Mr. J. D. Keiley of Brooklyn, described brake tests on electric cars and gave deductions therefrom, with comparison curves and tables. The other paper was read by Mr. R. A. Parke of Pittsburg and was more fundamental in character, going over the whole subject of railroad-car braking and ending with a brief description of the new, yet old, magnetic brake. These papers brought out a valuable discussion, and the whole forms a useful addition to technical literature. The Institute is deserving of all praise in disseminating knowledge of this useful and timely character.

A STRIKING diversity of opinion is shown to exist among managers and engineers of elevated electric railways in relation to the problem of maintaining third-rail contact in sleet storms. To a representative of the Western Electrician, who recently made some inquiries on the subject, three officers of as many elevated-railway systems in Chicago gave the views which are recorded on another page. Two of them agreed that it was possible to keep third-rail trains moving under all conditions of sleet and ice, but disagreed as to methods. The third, with a shorter term of experience in this particular kind of railroading, thought that under unusually severe conditions transportation service on elevated roads depending on contact-rail operation might be interrupted, and said that a reliable invention to keep the third rail clear of sleet and ice was greatly needed. Thus the preponderance of opinion is in favor of the practicability of steady third-rail operation in all sorts of weather; and we think that the 330,000 passengers who use the elevated roads of Chicago daily will agree that the service is good and free from serious interruptions, winter or summer. In New York, where elevated electric railways are new, much difficulty has been experienced in moving the trains in a recent sleet storm, and there has been a great public outcry; but we believe that with a little patience the traveling public of the eastern metropolis will find the electric service as satisfactory as it has been in Chicago. In this city, if a ballot were taken among the patrons of the South Side "L"—the very road whose representative was in some doubt whether sure contact could be had under all conditions of weather—we have not the slightest doubt that an overwhelming preponderance of the voters would be strenuously opposed to a return to the old steam locomotives. Experience has proved that electric power is better than steam for elevated-railway operation, from the point of view of the passenger as well as the operating company.

INVESTIGATORS in the field of pure and theoretical science have had much to say lately on the electron theory, and one of the latest contributions on this subject is made by W. Sutherland in an English journal. Mr. Sutherland has endeavored to reduce molecular attraction to the electron theory, and his efforts along this line of work are very interesting. A neutral gaseous molecule, containing a positive and a negative electron, is conceived at the outset. Such a molecule will have poles like a magnet, and will exert upon a similar molecule an attractive or a repulsive action, accordingly as unlike or like poles are nearest. However, an attraction tends to increase itself, and a repulse tends to diminish itself, and so it happens that on the whole there is more attraction than repulsion. The molecules attract each other, like magnets, with a force varying inversely as the fourth power of the distance. The author indicates that a strong contrast is shown to the law of gravitation, and the first condition of the electron theory is satisfied by the fact that molecular mass does not enter into the expression for molecular attraction. It may be considered that the two electrons of a molecule, like NaCl, when giving the line spectrum of sodium, revolve around one another in a circle of such size that centrifugal force and electric attraction are in equilibrium. They revolve perhaps entirely within the atom of sodium. The author calculates a theoretical frequency of revolution amounting to 28×10^{14} per second, which is about 10 times as large as that of the visible part of the spectrum.

MARCONI has succeeded in transmitting a wireless message across the Atlantic and is entitled to great praise for this wonderful achievement. This time it is not three dots merely, but a complete dispatch, and, from all accounts, not only one but several messages have been sent. The question that now naturally arises is, Is practicable transatlantic space telegraphy, on commercial lines, now in sight? It is evident that another great step has been taken toward the goal, but such important problems as speed, non-interference and immunity from atmospheric disturbance still remain to be disposed of. Marconi himself has said that space telegraphy is destined to supplement the ocean cables, not to supersede them. He undoubtedly knows more of the possibilities of the wireless system than any other man, but the new telegraphy may be extended far beyond his present conjectures. Certainly, it has shown a constant, if slow, development, and no one can set for it metes and bounds. On the other hand, almost everything done so far has been of an experimental nature. In every case where space telegraphy and the older method have been tried under conditions admitting of a comparison, the latter has done the better work. It may not always be thus, but so far as transatlantic wireless communication goes, the future still remains simply an interrogation point.

While the feature of transoceanic space telegraphy thus looms doubtful on the horizon, the laying of the time-tried cables is proceeding apace, as witness the operations in the Pacific. Even as we write, notice comes that the American cable between San Francisco and Honolulu will be completed on or about January 1st and operated in connection with a system of land lines in the United States. A temporary scare having subsided, cable shareholders are still undismayed.

BRAKING AND TRACTION BRAKES.

At the meeting of the American Institute of Electrical Engineers in New York on Friday evening, December 19th, the general subject for discussion was "Braking and Traction Brakes." About one hundred gentlemen were present, many of whom expressed their views on the topic of the evening. In his introductory remarks President Charles F. Scott said:

"Difficult braking problems are now being encountered in electric traction. The old hand brake of the horse car is inadequate when weights have increased tenfold, and speeds on our streets have increased three or fourfold, thereby increasing the stored energy in the car 100 times. Interurban railways, with their still heavier cars and far greater speeds, make the problem of braking quite similar to that in steam-railway service.

"In electric service in elevated and underground city railways, where stops are frequent and high-schedule speeds are essential, certain new elements have entered into the braking problem. Ordinarily, brakes are for the purpose of facilitating traffic and preventing accident. The new feature of commercial value which has come into the problem is that of quick retardation. The run from one station to the next consists in acceleration, running at a sensibly constant maximum speed, and retardation. To increase schedule speed it is important to lessen the time of retardation as well as that of acceleration. This is a new demand. It presents a new point of view in braking problems which have not previously been of importance in regular service.

"This is illustrated by the marked difference in schedule speed under average conditions, such as prevail on the elevated railways of Greater New York, between a low rate of braking and quick retardation. A change in the rate of retardation from one mile per hour per second to three miles per hour per second increases the schedule speed about 10 per cent. This effects a saving in time to the passengers of 10 per cent., and it reduces the number of trains required for carrying a given number of passengers by 10 per cent.

"We may divide the brakes in ordinary use into two classes: Hand brakes and power brakes. The latter may be again subdivided into air brakes and electric brakes. When the air brake is used on electric cars electricity is an acceptable auxiliary through the agency of the motor-driven pump.

"Electric brakes are of several general types. The motor itself may act as a brake in either of several ways. The motor may be reversed. This is a severe measure, which is seldom applied except in an emergency. The motor may be used as a dynamo for absorbing the energy of motion of the car. The power delivered by the motor or dynamo may be employed usefully by being returned to the line, of charging a storage battery on the car, or by heating rheostats which are used for heating the car, or, on the other hand, it may be wasted in heating rheostats under the car.

"Again, the current from the motor may be used for operating some form of magnetic brake. In this case the car is retarded both by the energy taken by the motor acting as a dynamo and also by the friction produced in the magnetic brake. The brake in this case may consist of two disks, one stationary and the other mounted on the car axle, or it may be track brake, in which there is friction between moving shoes and the track rail.

"Magnetic brakes may be operated independently of the motors by current obtained from the line or from a storage battery.

"These methods indicate various ways in which electricity may be used for braking and make obvious the extreme flexibility of electricity in its application to problems of this kind. The application of the braking effect in proper amount at the proper time and with a reliable method of control places very exacting requirements upon the designer of braking appliances."

Two papers were then read. Mr. Keiley, the author of the first, who is connected with the Brooklyn Rapid Transit Company, was unavoidably absent. His paper was read by W. C. Andrews. Mr. Parke, who is engineer for the Westinghouse Air Brake Company of Pittsburg, was present and read his own paper. Brief abstracts of the papers are here given.

Some Brake Tests and Deductions Therefrom.

BY J. D. KEILEY.

On account of the widely varying conditions of electric-railway operation, and of the fact that the design of equipment and track has been in a period of evolution from horse-car practice to a condition approximating heavy-railroad practice, many branches of the art, especially the subject of braking, have not been developed in the same proportion to their possibilities as has the subject of train braking with locomotive traction. It is apparent that the conditions of electric traction and the service requirements and constructions which have made desirable, and even necessary, great advances in the methods of braking, have also to some extent rendered these advances possible, and have given to investigators of the subject, as well as users of train and car brakes, a new interest and a broader field of activity.

On the braking of elevated and light interurban cars or trains the aspect of the problem has, of course, been changed from the conditions of locomotive traction—slow acceleration to comparatively low maximum speeds, and the braking of light cars with maximum passenger load equal to 60 or 70 per cent. of weight of cars—to the conditions of electric traction with distributed motors. In the latter case the motors are carried on the passenger trucks, with armatures geared directly to axles; here we find rapid acceleration to high maximum speeds, and the braking of cars with maximum passenger loads equal to but 45 or 50 per cent. of the weight of cars. The rapid acceleration and high maximum speeds with very efficient braking make possible high-schedule speeds under conditions of frequent stops. A concurrent condition, in many instances of the first importance, is the relation between effective braking

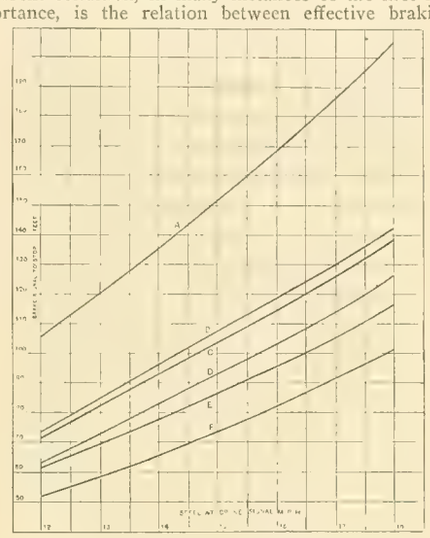

FIG. 1. COMPARISON OF BRAKE TESTS.

and liability to accident. Notwithstanding these changes in mechanical limitations and operating requirements, many small electric-railroad companies, and even many very large systems, have apparently been satisfied with old apparatus and have continued to use the single floating lever (or sway bar), inherited from horse-car practice. Another class of users have, at great expense, equipped their cars with novel and complicated apparatus, to be used in developing greater force for the application of brake shoes to wheel than could be produced with similar dispatch by human muscular effort when applied to brake wheels or crank handles. A third class of users and a large class of investigators have endeavored to effect the retardation of cars by other means than friction between wheel and rail set up by the pressure of brake shoes upon wheels.

A class of braking which is of the first importance on account of the very large number of cars in service, and the magnitude of the accident liability affected by them each year, is the emergency braking of cars of from 15 to 25 tons weight (including passenger load), from speeds which are under 30 miles per hour. This class of brake service is clearly differentiated from what is commonly known as "high-speed" braking, and requires for its accomplishment a different sort of apparatus. Consider, for instance, the case of a double-truck electric car used in city, suburban or interurban runs, or for all three classes of service collectively. This is a very ordinary case, and perhaps the most exacting requirements on the braking apparatus of such a car are those met with in the city or suburban runs, where cars are operated over public highways and unprotected crossings at comparatively high speeds. Under these conditions, emergency stops must often be made, and a braking apparatus is required which is capacitated to stop a car that is moving at a rate varying from 15 to 30 miles per hour, and in the shortest possible distance after the motorman receives notice of the necessity to check the speed.

Such cars are frequently equipped with merely a hand brake and a single floating lever (giving anywhere from 25 per cent. to 40 per cent. excess brake pressure on the rear brake); with a hand brake and some system of equalizing levers; with air or other power brake and equalizing levers; or with some power brake in which, in addition to the friction between wheels and rails, as introduced by a rail shoe depending for its friction either upon a portion of the weight of the car, an entirely separate frictional force is set up by electromagnetic action between the rail shoe and the rail. None of this apparatus, except, perhaps, the last mentioned, exhibits any marked advance over the braking of cars used in locomotive traction in city or suburban service.

This paper will contain a brief statement of certain methods which have been used in the determining for an electric-traction company the relative merits of several types of power brakes.

In designing new or investigating existing brake apparatus, the identity and relative importance of the several consecutive events which occur in the stopping of a car under ordinary conditions should be fully considered. It was thought desirable in the brake tests described below to plot accurately a curve sheet, such as is shown in Fig. 1, where the distances in which a car can be brought to a stop from different speeds at brake signal are shown graphically for the brakes under consideration, as this is the first question usually asked concerning the performance of a brake. A curve sheet was worked up for each braking test.

A considerable number of individual sheets were worked up for each type of brake tested, and from these sheets were determined coefficients or equations of curves of comparison.

Fig. 2 is a diagram showing the method of obtaining accurate measurements of the distance required for stops. Fig. 1 is a comparison chart, showing stops from speeds of 12 to 18 miles per hour, with six different brakes.

The following method was adopted to secure the requisite data for plotting these curves: In all tests the same type of car was used, mounted on similar trucks, and all cars were put in as nearly the same condition as possible and loaded to the same gross weight by an amount equivalent to a heavy passenger load. The cars were run in the same direction over the same section of track on a uniform grade, wind and humidity conditions being as nearly uniform as possible, and great care was taken to determine with accuracy in each case the speed of car at brake signal and the actual distance traversed between brake signal and the stopping of the car. An axle of the

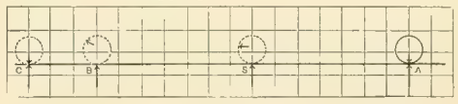

FIG. 2. BRAKE TESTING.

car was fitted with a drum carrying a contact plate which momentarily closed a battery circuit once in each revolution; this circuit energized an electromagnet operating one of two recording pencils, under which a strip of paper was drawn at uniform speed by a very accurately adjusted spring motor. The operating magnet of the other pencil of the two above mentioned was energized by a circuit which was closed every half second by a contact-maker actuated by a carefully adjusted clock movement. It will be readily seen that with this apparatus a record sheet could be obtained that would contain a clear record of wheel revolutions; from this the number of revolutions during any interval or the duration of any particular wheel revolution could be determined with great accuracy.

The method of using this apparatus to obtain the data desired was as follows: When the arrow mark on wheel (see Fig. 2) is in contact with rail, the revolution-counter circuit is closed by contact on axle. Each run started with this mark in contact; at stop the point of contact between wheel and rail was marked on rail, and the car rolled on until the arrow mark on wheel again came in contact with rail, giving the final fractional part of a revolution to be used in getting the total length of run by wheel revolutions, which was subtracted from the length of run by tape measurement to get the distance skidded. In Fig. 2 (A) is the position of wheel at start; (B), position of wheel at stop; (C), position to which wheel was rolled to get last fractional part of a revolution; (S), point at which brake signal was given, determined by record of revolution counter; (AB), tape measurement, total distance run; (AS), computed from revolution recorder; (AB) — (AS), distance to stop = (SB).

The car was placed near the starting point and moved backward or forward until the contact on the axle drum was closed, then the point of contact between the wheel and rail was chalk-marked both on wheel and rail. Then the record paper was put in motion, the car started and brought up to speed very gradually to avoid the possibility of slipping of the wheels. When the desired speed was attained, an electric bell was rung as a signal for an emergency stop. The circuit of this bell traversed the operating magnet of the chronograph pencil, and by drawing this pencil farther than it was ordinarily drawn by the clock circuit, produced a clearly defined record of the exact time at which the signal bell was rung. When the car was brought to a full stop, the bell was rung again in order to make a record of the time elapsed between brake signal and stop. The position of the point of contact of the front wheel was then carefully marked on the track, and the car moved slowly along until the first chalk mark made on the wheel was brought again in contact with the rail, and the rail was marked at this point. A tape measurement was then made between the first and second marks, giving accurately the total length of run; and between the second and third marks, to determine the distance traversed in the final fractional part of a wheel revolution. The distance from start to brake signal determined by the wheel-revolution record on the chronograph chart was calculated; this distance deducted from the total length of run (a tape measurement), gave an accurate measure of the distance from brake-signal to stop. Furthermore, where there was a difference between the total distance run by tape measurement and the total distance indicated by the wheel-revolution chart, such difference only occurred in case of skidding, then the difference was the measure of the distance skidded.

The charts show the relative efficiencies of the various brakes for emergency stops; for instance, at 15¾ miles per hour speed at brake signal the distances from brake signal to stop are: For brake

(A), hand brake, 164 feet; for brake (B), power brake, 115 feet; for brake (C), power brake, 112 feet; for brake (D), power brake, 100 feet; for brake (E), power brake (B) with differential levers, 93 feet; for brake (F), power brake, 80 feet.

The curves show plainly the relative efficiencies of the several brakes in making emergency stops.

To reduce the liability to accident and to effect economy in the use of motive power, it is desirable to secure as high a rate of braking as is consistent with the comfort of passengers; and if we assign a total cost per equipment per year to each type of brake considered, then the most desirable brake will be that for which this total is a minimum. The total cost per equipment per year should include the following items: Cost of maintenance, labor and material, cost of power for operating brakes, interest on investment, cost of accidents per equipment per year.

The cost of maintenance and for power must be estimated from the best data at hand. As to the cost of accidents, a figure was readily obtained for hand brakes. A figure was also obtained for brake (D), for which the record of a number of equipments was accessible. From these amounts, chargeable to hand brakes and brake (D), the amounts which should be applied to the other brakes were estimated by a graphical method, taking into consideration the distances in which stops may be made with the respective brakes. Under the item of cost of power in the original comparison a charge was made against the hand brake, which represents the amount of power necessary for operation with hand brakes in excess of what would be required with a power brake, due to the lower rate of braking with hand brakes; as the same schedule speed can be maintained at a smaller expenditure of energy by using a more effective brake, the time of running with power being reduced and cars allowed to coast a greater distance.

Below is given an approximate comparison table for several power brakes:

	A	B	C	D	E	F
Maintenance of power brakes and extraordinary repairs, chargeable to brakes	.....	58.80	10.95	36.25	.....	29.20
Power	.....	29 20	.....	.....	25	
Interests	.....	15	5	6.50	17.50	11.50
Accidents	.....	58	53	37	30	15
	.....	161	68 95	79 75	72.50	55 70

The totals above, which are, of course, only of approximate accuracy, show that under certain conditions a very considerable amount per annum may be saved by the judicious selection of brakes.

Railroad Car Braking.

BY R. A. PARKE.

[In this paper were given a sketch of the practical development of brakes in railroad service, an analysis of the results of investigation of brake-shoe friction, a definition of the requirements and limitations of brake efficiency in practice, a consideration of the loss of braking efficiency through disturbance of the normal rail pressures by brake retardation and a description of the means of compensating for it. The concluding paragraphs are given in full.]

To enter into the detail of the air-brake apparatus employed to furnish the braking force, in a paper of this character, would unduly extend it and would also be a work of supererogation. The compressed-air supply generally implies a suitable compressor upon the car, or, if operated in trains, one or more upon each train. Storage of the compressed air in sufficient quantity has, however, been satisfactorily accomplished in some cases, and possesses certain advantages. The air is usually stored at a comparatively high pressure (generally 150 pounds) in large reservoirs secured beneath the car, or in any other convenient place. It is delivered through a reducing valve into the "main reservoir" of brake operation, at the desired pressure, where it is handled in the ordinary manner. In such a system a single air compressor of large capacity and high efficiency compresses the air at a station, where it is stored and charged into the car storage reservoirs from time to time. The advantages lie in avoiding the cost of installing and maintaining compressors upon all the cars, and in cheapness of operation. The disadvantages consist of the bulkiness of the storage reservoirs and the time required to stop and charge them, and also the limited distance that may be traversed in the intervals. Where the air is compressed upon the car, the compressor must be accessibly constructed and placed upon the car, and supplied with clean, dry air. It may be operated by steam, by a separate electric motor, or by the car motor, through suitable connection with the car axle, as circumstances render it expedient. Its operations should be so controlled by a governor that it shall cease whenever the maximum storage pressure has been attained in the main reservoir, and shall be renewed when operation of the brakes has reduced the storage pressure to the inferior limit.

Upon the motorman's operating valve, the satisfactory operation of the brake system in large measure depends. It must not only present the means of accurately gauging the force of brake application and of promptly releasing the brakes, but must also define with precision the pressure of the air with which the auxiliary reservoirs are charged, to insure the full efficiency of braking without exceeding it to the injury of wheels and detriment of efficiency, while, at the same time, it must provide a superior pressure, that may vary considerably under different conditions, in the main storage reservoir, to insure prompt release of the brakes and restoration of pressure in the auxiliary reservoirs, without any variation of the working pressure in the latter—an exacting combination of conditions, not easy of realization, but of capital importance.

Of the apparatus for the immediate application of the brakes to the wheels, sufficient has already been said, it having been indicated that, in the single case where the unit invariably consists of a single car, simply an air cylinder in communication with the motorman's valve meets all the requirements, while the conditions of every other case justify nothing short of the efficiency of the quick-acting automatic apparatus, and, where characterized by high speeds and frequent stops, the superior efficiency of the high-speed brake is essential to high efficiency of service.

The application of other forms of power than compressed air to brake service has been practically limited to the vacuum and electricity. The limited pressure and bulky apparatus have restricted the use of the vacuum to comparatively light vehicles, and it is fast becoming a mere historical feature of the development of the art of braking. Electricity has been experimentally applied in various forms of apparatus, but has only recently become recognized as a means of promising utility in practical braking. The simplicity of employing the back torque of the car motors of electric railroads for retarding purposes has appeared very attractive to those unacquainted with the objection to dependence upon that means alone. In combination with other means of retardation, so that excessive heating may be avoided, this means of braking cars has been used with some practical success. But the application of electricity to the purpose of braking that appears to overshadow all others is that of the magnetic brake, which embodies such novel applications of old devices, with results so phenomenal, that the use of electricity as the source of braking force in electric-railroad service at once occupies an interesting position with a very promising future.

The magnetic brake forms part of a combined braking and car-heating system, in the latter of which, the diverters of the ordinary car-starting apparatus are so also used as resistances for grading the current employed for braking purposes that they serve to heat the car. This part of the system is itself of such interest that, while it is a separate purpose, a brief description is excusable.

It appears to be a well-established fact that the heating effect due to the use of the diverters in starting is not alone sufficient for the practical purpose of heating the car, under the usual varying conditions of service; but when, in addition, the heating effect of braking is also diverted to that purpose, the heat supply is abundant. Two systems of diverters are therefore used, one beneath the car, radiating the heat into the external atmosphere, and the other suitably arranged within the car for heating purposes. The two systems may be so combined, according to the temperature and weather, that any desired portion of the generated heat, from none of it to all of it, may be employed for heating the car, and any remaining heat is dissipated. The heat supply is, of course, intermittent, but the heaters are so constructed that they readily absorb the heat as generated, and gradually and continuously supply it to the car for uniform heating. In this manner the cost of the trolley current, ordinarily required for heating purposes—an item of no mean proportions—is entirely obviated.

The brake apparatus itself consists of a combination of a track brake with the ordinary wheel brake. Track brakes have long been known and variously proposed for practical use, but no satisfactory application of these devices appears to have been made. The track brake consists of a system of brake shoes, arranged beneath the car, directly over the rails, which may be forced down upon the rails to produce the retarding friction. There are several serious obstacles to the attainment of satisfactory efficiency from this method of retardation. In the first place, as the weight of the car must be lifted off from the wheels and transferred to the track-brake shoes, it is obvious that the shoes must be so formed that they will guide the car upon the rails as safely and surely as do the wheels. This appears to be impracticable, and, where the track brake has been employed, only so much of the weight of the car is transferred to the brake shoes that there still rests upon the wheels sufficient weight to enable them to guide the car securely. Thus only a portion of the weight of the car is available for rail friction.

Again, it is manifest that the friction of the track-brake shoes is of the same dynamic character as that of the brake shoes upon wheels, which varies inversely with the speed, and is very much inferior to the static friction of the rotating wheels upon the rails, which is the measure of the available friction of brake shoes upon the wheels. While it is undoubtedly true that the large area of contact between the rails and track-brake shoes that may be employed results in a track-brake friction which is much superior to that of the sliding wheels (provided the entire weight is transferred to the track-brake shoes), it is doubtful if the conditions permit the realization of as high a coefficient of friction where brake shoes rub upon the track as where they are applied with the same force to the wheels, and it is certain that a track brake of any construction, working upon this principle, is much inferior to an efficient wheel brake of the "high-speed" type. The combination of a track brake of this kind with a wheel brake is merely an added intricacy, as the efficiency of the track brake is entirely at the expense of the wheel brake, in robbing the latter of the rail friction upon which its effectiveness depends. For these reasons, and for the additional one of constructive complication and cost, no practical application of the track brake has ever been made, within the knowledge of the writer, except in certain cases of street railroads with exceptionally heavy grades, where an independent track-brake system has been installed for emergency use only, in the event that the wheel-brake system should become disabled.

But the magnetic brake introduces an entirely new element, through which the track brake does not interfere with the efficiency of the wheel brake, but both adds to its normal retardation and provides the operating brake force. The track brake shoe is placed between the two pairs of wheels, and, instead of being forced upon the rails through an effort from the car, is drawn to the rails by an electromagnet suspended from the car, thereby not merely adding its friction to the unimpaired friction of the wheel brake, but also actually increases the rail pressure of the wheels to the extent that the supporting springs for the track shoes and magnets are in tension through the descent of the track shoes to the rails. The construction will be better understood by reference to Fig. 3.

In Fig. 3, the magnetic-brake apparatus is shown as applied to a four-wheeled, swiveling truck, the parts of which are in dotted lines, more readily to distinguish the brake apparatus. The electromagnet (a), dividing the track brake shoe (b) into two parts, is secured by pins to the two push rods (c), and suspended at a proper distance above the rails by the adjustable springs (h). The push rods are secured by pins to the lower ends of the brake lever

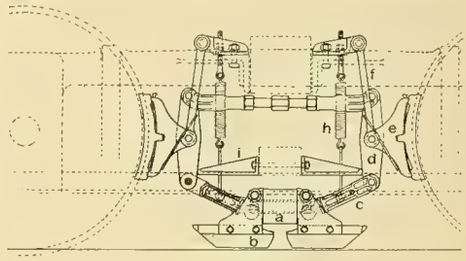

FIG. 3. MAGNETIC BRAKE.

(d), which are connected at their upper ends by the adjustable rod (g), and at an intermediate point are pivoted to the brake-shoe holders, and the hanger links (f), suspended from the truck frame. The push rods (c) are telescopic, as shown in the sectional view of the one at the left, so that a movement of the track shoe toward the right relative to the truck frame, causes the wheel brake shoe at the right to be applied to the wheel and the connection (g) to be moved to the left, thereby applying the wheel-brake shoe at the left, the stop (i) preventing the lower end of the brake lever at the left from following the track brake shoe. A relative movement of the track-brake shoe to the left is obviously accompanied by application of the wheel-brake shoes through corresponding movement of the parts in the reverse order.

The brake-controlling device may be incorporated in the running controller, or may be a separate device, placed by its side and operatively interlocked with it, so that neither can, through carelessness, be caused to interfere with the operation of the other. In the operation of the apparatus, the current is supplied by the motors, running in multiple as generators, and is divided between the electromagnets and the diverter combination, in such ratio as to cause the track brake shoes to be drawn upon the rails with a force proportionate to the braking requirements. The frictional resistance of the rails to the motion of the track shoes causes the wheel brakes to be applied with corresponding force. Thus, to the ordinary retardation of the wheel brakes is added that of the track brake and also the back torque of the motors, which, however, is practically limited to compensation for the rotative energy of the motor and car wheels. The force of application depends primarily upon the current and upon the electromagnets operating the brake shoes. The attractive force of the rails upon the magnets is under the control of the motorman up to a limit of about 150 pounds per square inch of brake-shoe surface in contact with the rails. The strength of the magnet is limited by the sectional area of the rail, acting as armature, and where the weight of the car makes a magnet of greater strength desirable, the track shoe is divided into three parts, instead of two, and wound to form a three-pole magnet, or two electromagnets, with one common pole.

The friction of the track brake shoe may also be adjusted to some extent through the angular inclination of the push rods (c), by which some of the weight of the car may be thrown upon the track shoes, the levers (d) being correspondingly adjusted to reduce the wheel brake-shoe pressure in proportion as the weight is transferred to the track shoe.

It will be observed also that the brake shoes are hung at the inside of the wheels, so that the hanger links may have an angular inclination to correspond with the transfer of weight from the rear to the forward pair of wheels through the influence of the retarding forces.

The incidental features of the magnetic brake are also of interest and great value. The current declines with the speed during a stop, thereby offsetting the increased coefficient of friction at the lower speeds. In bad weather, when the condition of the rails is liable to be accompanied by wheel sliding, the braking force operating the wheel brake is correspondingly reduced, so that the force of application of the wheel brakes is automatically proportioned to the rail friction which rotates the wheels. But, in addition to this valuable feature, if, by chance, the wheels should slide upon the rails, the interruption of wheel rotation is accompanied by the extinguishment of the track-magnet current, through which the pressure of the brake shoes upon the wheel is instantly relaxed and rotation of the wheels is resumed, without injury or serious loss of time.

In operation, the efficiency of the magnetic brake under the various conditions of service is phenomenal, and far exceeds that of any other braking system for the retardation of trains, which, combined with the commercial advantage of dispensing with the use of trolley current or any other means of heating cars, seems to assure it a leading position in electric-railroad operation of the future.

Discussion (in abstract).

C. O. Mailloux: We are indeed to be congratulated upon having had a paper by Mr. Parke on this subject. I regard Mr. Parke as the greatest authority, in this country certainly, and perhaps in the world, on the subject of braking. When an author has been studying a subject like this for as many years as Mr. Parke has done, if he is unable to give one a clue as to what might be a typical brake curve, then you may indeed realize what a difficult problem we have before us. The paper of Mr. Keiley, while it is interesting in the comparison which it gives of results obtained with actual brakes, is of great interest to me on account of the fact that it represents, at least, an attempt to obtain practical brake curves; that is, it shows an interesting mechanism whereby one may be able to obtain data giving the co-ordinate points from which brake curves actually obtained may be plotted out.

Calvert Townley: A test was conducted in Boston about a year ago by the Boston Elevated Railway Company to determine a number of braking and other questions, with reference to their equipment, and the following test was made: They took a train on their elevated structure, composed of three cars, which cars were equipped with motors, brakes and all the other paraphernalia, the three cars being similar, and they ran them up to possibly their maximum rated speed, somewhere between 35 and 40 miles an hour, and then applied the emergency brakes, keeping the current on the motors at the same time, to determine what effect it had, first, on the motors and other car equipment, and, second, on the speed of the car. The actual result was that the train slowed down to 20 miles an hour, approximately, and then maintained a constant speed, showing that, with each motor car equipped, it was not practicable to stop the train by means of brakes. That is a fact which is easily demonstrated by a braking calculation, but at the same time it had not been brought to my mind forcibly and conclusively.

Mr. Parke: In reference to the distance required to stop a car at a speed of 60 miles an hour with the magnetic brake, I may state that there have been no tests made with the magnetic brake, that I am aware of; that is, no definite tests under known conditions have been made—no systematic tests—which would enable one to say how the stops compare with the high-speed brake. I have not as yet, at any rate, received any information in regard to it. It is manifest on the face of it that the stops ought to be better, and much better, than with any wheel brake, because, while with the high-speed brake, even, the brake-shoe pressure is greater during the early portion of the stop when the coefficient of friction is low, thereby compensating, and is reduced toward the end of the stop when the coefficient of the brake-shoe friction arises, the same effect may also be acquired with the magnetic brake. It is a mere question of regulation, and, in addition, you have also all the braking effect of the track brake.

Elias E. Ries: There seems to me to be quite an interesting point which Mr. Parke omitted from mentioning in his paper in referring to the electric magnetic brake. It would appear on the face of it that by the employment of magnetism there would be an increase in the coefficient of friction between the brake shoe and rail, in addition to that due to the attraction of the shoe upon the rail, which is given in the paper as being up to a limit of 150 pounds to the square inch. I ask Mr. Parke if he has noted any such increased effect—the braking or sliding effect, which is probably due to increase of the molecular action or friction between the brake shoe and the rail, on account of the magnetization independently of the pressure? If that be the case, it would seem to me that that is an important point in connection with an electric magnetic brake.

Mr. Parke: I will say in answer to the gentleman that the statement regarding the limit of 150 pounds to the square inch, was that that is the limit of the magnetic attraction of the shoe toward the rail; in other words, that is the force with which the shoe presses upon the rail. There has been, to my knowledge, no attempt to determine whether a different coefficient of friction exists under such conditions from that which will exist from mere pressure, without the presence of electricity and magnetism. There has been no systematic experimenting with this form of brake to determine its exact efficiency, and that could only be done by a knowledge of the efficiency of the wheel brakes by themselves, and then the added effect of the magnetic brake could be measured, and the coefficient of friction determined therefrom. That has not as yet been done.

Mr. Parke: I do not know that there has been any observation whatever of the frictional effect of the magnetic brake. I have not been informed that there has appeared to be any greater friction between the magnetic brake shoe and the rail than would be accounted for by the ordinary coefficient of friction with the pressure that goes upon it.

William Nelson Smith: We have been somewhat interested in the subject of electric braking by what as Mr. Parke has said, is known as the back-torque method; that is, throwing the overhead switch, pulling down the trolley, reversing the reverse switch and throwing the controller clear on, and then noting that the speed of the car was suddenly checked. This, as an emergency operation, has been very well known to people operating electric railways ever since it became the practice to use double reversing switches for two-motor equipments. I have more than once carried a heavily loaded car and trailer down a four per cent. grade, when the old-fashioned hand brake was so bad it could not be worked, carried 200 people in safety down a bad grade without accident, at a slow rate, which it would have been impossible to do with the braking apparatus on the car. After seeing Mr. Sperry's original electric brake at the Atlanta meeting of the American Street Railway Association in 1894, I tried an experiment or two, for my own amusement, on a double-truck street car, about the size of some of the smaller cars used in New York, 21-foot body car, Brill maximum traction trucks, having G-800 motors, one on each truck, and I went through this so-called electric-brake application without applying the hand brakes. I checked the speed of the car, and went through the operation several times, and then looked around to see what was happening underneath the car. I noticed that the rear wheels of the truck would vibrate like the balance wheel of a watch, going first in one direction and then in another. The reasons are well known—that the action of the motors is producing this braking effect; and what Mr. Parke said about the increased braking effect upon the front wheels of the car was all proven by the fact that the rear motor lost its grip. One motor, of course, was bound to overpower the other, but with an empty car it appeared that there was no reason why one motor should have any more weight than the other, and it was hard to see why it was the rear motor which vibrated and went backward, the wheels revolving in opposite directions.

Important—if True.

[From the Chicago Daily News.]

Paris, December 18.—"Our French railway administration will be the first to introduce electrical traction on long-distance lines," said an official of the Paris, Lyons and Mediterranean system to the Daily News correspondent this morning. "While other nationalities have been talking we have been acting," he continued, "with the result that within six months the south express from Paris to the Pyrenees will be run entirely on the automobile principle."

Experiments in this direction have been conducted with the greatest secrecy and with almost unvarying success, except in the case of heavy freight trains, where damage to the apparatus was almost the invariable result. Beginning June 1st the first ordinary express trains between Paris and Lyons—a distance of nearly 400 miles—will be operated solely by the electric current. The distance will be covered in less than five hours—little more than half the present schedule time.

Should this innovation prove a success, the system will at once be extended. "It has certainly proved cheaper," said the above-mentioned official. The electric locomotives are 17 meters (56 feet) in length and are pointed fore and aft. The traction apparatus occupies only 2½ meters (seven feet six inches) and consists of a 220-horsepower generator [!] A single operator is sufficient to control the engine.

At the outset the trains will be composed of two carriages, each seating 50 passengers. Later two more will be added. The details are yet to be studied, but there is no doubt that the system will be a practical success. The splendid working of the electric line between Paris and Versailles is understood to have given impetus to the installation of the system on a larger scale and to such an extent that French officials predict a speedy revolution of traction on all existing lines.

Petitions are being circulated asking the mayor and City Council of Girard, Kan., to call a special election to vote on a proposition to issue $10,000 in bonds to establish a gas plant for the city and also $20,000 for a municipal electric-light plant.

Frank Hedley Appointed General Superintendent of New York Rapid Transit System.

Frank Hedley, who has been prominently connected with the elevated railways in Chicago during the last 10 years, has been tendered and has accepted the position of general superintendent of the Interborough Rapid Transit Company of New York city. This is the company which is to operate the new underground rapid-transit system in New York, in conjunction with the Manhattan elevated system, and the appointment comes to Mr. Hedley as a decided compliment to his ability and past record. He has tendered his resignation as general superintendent of the Lake Street and Northwestern Elevated Railroad Companies of this city, and will enter upon his new duties on January 15th.

FRANK HEDLEY.

Frank Hedley is a son of James Hedley and is of an old English family that was one of the first in the world to be connected with steam-railroad and locomotive engineering. Frank Hedley's granduncle was William Hedley, who was the designer and builder of the first locomotive traction engine that was ever constructed: a model of this engine was exhibited in Chicago at the World's Columbian Exposition in 1893, and this model was, at the close of the fair, turned over to the Field Columbian Museum of this city, and is now on exhibition there.

Mr. Hedley learned the mechanical-engineering profession in England and came to this country in 1882, and engaged with the Erie Railroad at its Jersey City shops as a machinist. He then went with the Manhattan elevated road as a machinist engine inspector for the Third Avenue division, and then was promoted to the position of assistant general foreman in the locomotive department. He remained with the Manhattan company for 5½ years, and was then connected with the Kings County Elevated Railroad in Brooklyn, N. Y., as master mechanic for 3½ years. He became superintendent of motive power and transportation of the Lake Street Elevated Railroad Company of Chicago in June, 1893, and had full charge of the construction of the cars and locomotives and of the operation of the road.

In 1894 and 1895 the construction of the Northwestern elevated and the Union Loop was begun. During all the construction Mr. Hedley was on the consulting engineering staff. In November, 1897, Mr. Hedley had charge of fully equipping and starting up the trains around the Union Loop; he also organized the forces and started the Northwestern Elevated in 1900. He occupies the position of general superintendent with the Lake Street Elevated Railroad Company and the Northwestern Elevated Railroad Company, the latter including the Union Loop. He is also a director of the Lake Street company and has been vice-president of the company.

Mr. Hedley's mechanical genius has always been used for the betterment of the elevated properties and he has taken out several patents for some of his inventions. One patent granted in 1897 covers a railway truck that is particularly adapted for electrically operated railroads. All of the cars and motors on the Northwestern Elevated have been equipped with these trucks, and they have also been adopted for the Lake Street Elevated, being applied on all new equipment. Another of Mr. Hedley's patents is for a device for cleaning the third rail from snow and sleet, which is also in service on the Lake Street and the Northwestern elevated railroads.

In his new position as general superintendent of the Interborough Rapid Transit Company, Mr. Hedley will have full supervision of the operation of the system and will be alone responsible to the vice-president and general manager, E. B. Bryan. During his connection with the elevated-railway interests of Chicago Mr. Hedley has made many business and personal friends, who will regret his departure. Mr. Hedley's family, which resides in Edgewater, Chicago, will follow him East in the spring.

The Calumet and Southeastern Railway Company of Chicago has been incorporated, to operate an electric railway, starting from a point on the Calumet River at Chicago and extending in a southerly direction to the Ohio River. The incorporators who compose the first board of directors are W. S. Dye, B. T. Bacon, Charles S. Barber, F. L. Schulze and R. S. Dutton, all of Chicago. The principal offices of the company will be in Chicago.

DEVELOPMENT OF THE TELEPHONE FIELD.

New Telephone Patents.

An important telephone invention has just been patented by William M. Davis of Chicago and assigned to the Stromberg-Carlson Telephone Manufacturing Company. The invention has for its object the provision of improved circuit arrangements for telephone systems employing primary and secondary windings of transformers, and relates particularly to that class of telephone systems wherein the receiver is included in a local secondary circuit with the secondary winding. In practicing this form of telephony the primary winding has usually been included directly in the main line, as also the transmitter, battery current having been usually supplied to the transmitter and the primary winding over the telephone line. The primary winding has usually been of one-half-ohm re-

FIG. 1. NEW TELEPHONE PATENTS.—DAVIS' TELEPHONE SYSTEM.

sistance, while the receiver contained resistance to the amount of 90 ohms and the secondary winding to the extent of 60 ohms, the secondary circuit having thus vastly more ohmic resistance than the primary winding. In practicing his invention Mr. Davis increases the primary winding preferably to 11 ohms, which causes additional impedance in the circuit including the same.

It is theobject of the invention to counteract or nullify the impedance due to the primary winding, which is accomplished by means of a low-resistance secondary circuit. This secondary circuit includes a secondary winding, which instead of being of high resistance —as, for example, 60 ohms, according to the prior art —is greatly reduced, having, preferably, 10½ ohms. In order to maintain this secondary circuit of as low resistance as possible, the receiver included therein is provided with two coils, each of 50 ohms, connected in parallel in the circuit. The secondary circuit thus in practice has about 35½ ohms resistance. This secondary circuit by being of this low resistance, which is about one-fourth of resistance usually employed in the prior art, serves to counteract impedance due to the primary winding. In order to get the necessary strength of current and pressure in the secondary circuit that would otherwise be impaired by the reduced number of turns and resistance in the secondary winding, the primary winding has its resistance and number of turns increased to maintain or produce the required transformation. Thus are two

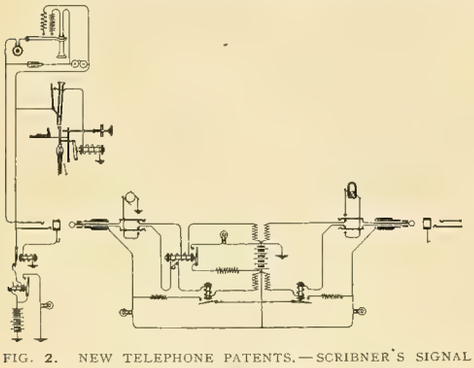

FIG. 2. NEW TELEPHONE PATENTS.—SCRIBNER'S SIGNAL FOR TOLL LINE SYSTEMS.

important departures made from the practice of the prior art—one the reduction of the resistance in the secondary circuit, particularly the secondary winding therein, and the other an increase over accepted practice in the length of wire and number of turns in the primary winding. Fig. 1 illustrates the application of the invention to a common-battery system.

A recently patented invention of Charles E. Scribner of Chicago is a supervisory signal for a telephone-exchange system and is illustrated in Fig. 2. A metallic-circuit telephone line extends from a toll station to a central office where a battery is bridged across the line, one pole of the battery being grounded. There is telephone apparatus in a bridge of the line at the sub-station and a toll box which has a coin-chute and a switch adapted to be actuated by a deposited coin. Mechanism is provided so that the subscriber may control the disposal of the coin. A ground branch from one of the line conductors is controlled by the coin-actuated switch, and a signal-controlling electromagnet is arranged with two differential windings, one in each of the line conductors, whereby the central-office operator may be informed of the presence of a coin in the toll box.

Telephone Controversy in St. Petersburg.

As reported in a previous number of this journal the city administration of St. Petersburg awarded not long ago to the Kellogg Switchboard and Supply Company of Chicago the contract for the erection and installation, with instruments, of a telephone exchange to have a capacity of 40,000 subscribers, the contract price being about $196,000 in American money. The St. Petersburg papers have had much to say in relation to the awarding of this contract, criticizing the city authorities for accepting the push-button telephones said to have been specified in the contract, and also alleging that the contract price was too high. In response to this clamor and to the representations of Russian firms and Russian agents of German, Swedish and American competitors of the Kellogg company, which asserted that a foreign concern had been unduly favored, the city administration, according to the Novoye Vremia, the leading daily of Russia, annulled the contract with the Kellogg company and called for new bids. This action is described as having been taken on November 13th, the date of opening the new bids being fixed for November 19th (these dates are old style). The new specifications called for the push-button telephones of the Kellogg type, but restricted the cost to 372,000 rubles, about $189,000. With this action neither the Kellogg company nor its critics were pleased. The Kellogg people said the city had no legal right to annul its contract; the local people and the representatives of other foreign companies objected that the push-button specifications were still retained and that the time allowed for submitting new bids was too short. According to the Novoye Vremia of November 20th (old style), just received in Chicago, at the meeting of the city authorities on the preceding day, when the new bids were to have been opened, a final protest was made by the representative of the Kellogg company. The St. Petersburg officials withdrew for consultation, and although no official announcement was made, the Novoye Vremia says that it is confident that the original contract with the Kellogg company was finally upheld. As the Russian journal named has excellent sources of information, there seems little reason to doubt that the Kellogg company has at last secured the contract beyond all question.

Nebraska Independent Telephone Association.

The annual meeting of the Independent Telephone Association of Nebraska was held in Lincoln on December 19th and 20th. The convention was well attended and unusual interest was shown by all the members present. The following papers and addresses were given: "Rural Line Development," by A. M. Munn, Nebraska City; "Traffic Contracts With the Bell Company, and the Disadvantages Accruing to the Contracting Independent Company," by J. H. Adamson, Broken Bow; "Inspection and Maintenance," by C. M. McNeill, Beatrice; "Toll Rates and Division of Tolls Between Connecting Companies," by A. E. Gantt, Fall City. The following-named officers were elected: President, I. D. Clark, Papillion; vice-president, J. H. Adamson, Broken Bow; secretary and treasurer, E. C. Hansen, Fairbury, Neb.; executive committee, T. H. Pollock, Plattsmouth; A. E. Gantt, Fall City; A. M. Munn, Nebraska City. The association adjourned to January 18 and 19, 1904. The following manufacturing concerns had exhibits at the convention: American Electric Telephone Company, Swedish-American Telephone Company, Stromberg-Carlson Telephone Manufacturing Company, Ericsson Telephone Company, Eureka Electric Company, Chicago Telephone Supply Company, Kellogg Switchboard and Supply Company.

Cumberland Service Near Evansville.

In relation to the recent interruption of telephone service in and near Evansville, Ind., Mr. Leland Hume, assistant general manager of the Cumberland Telephone and Telegraph Company, writes to the Western Electrician to the effect that any general interruption must have been on lines other than those of his company, and says: "The morning after the heavy windstorm our long-distance service was disabled, but by 10 o'clock of that day satisfactory connections had been established in all directions. This was on account of the fine organization of the company."

The Niagara County Home Telephone Company of Niagara Falls, N. Y., has given a mortgage of $500,000 to the Empire Trust Company of New York. The mortgage calls for the issuance of 100 bonds of $100 each, 280 at $500 each and 50 at $1,000 each.

Te'ephone News from the Northwest.

An impatient house mover in Minneapolis has got into trouble by cutting a telephone wire. He wanted to move a house on Thanksgiving Day, and the men of the telephone repair department were all off duty. He was informed that a man could be got by paying holiday wages, which he declined to do. He then proceeded to cut the wires himself. The Northwestern Telephone Exchange Company then had him arrested on a charge of injuring telephone wires. The penalty for this offense is a fine of $500 or imprisonment in the penitentiary for not more than five years. He pleaded not guilty.

C. C. Gowran, a banker and bond buyer of Grand Forks, N. D., has become associated with the officers of the Twin City Telephone Company in their application for a franchise for a local exchange at Grand Forks. The state law provides that a franchise cannot be granted to any but a resident. The company proposes a long-distance line from the Twin Cities to Grand Forks, thence on to Winnipeg.

The Twin City Telephone Company, operating Independent exchanges in Minneapolis and St. Paul, reports a steady increase in cash collections by months from January of 1901 up to date, including November. The collections for November of 1902 are on a basis of an annual business of $264,041.80, to which figure it has grown from $16,716.60 in January of 1901.

The Northwestern Telephone Exchange Company has bought the lines of the Davis company into Minot, N. D., and will soon complete connections and have long-distance service into that city.

The council of Crookston, Minn., has passed a resolution requiring wires in the business district to be placed underground. The ordinance becomes effective July 1, 1903. No more overhead wires are to be strung without the permission of the council, however.

The reports of telephone companies of Minnesota to the state treasurer show that there are from 125 to 150 new companies in business in the state, which have started within a year.

The Iowa Telephone Company contemplates erecting a modern central-exchange building at Des Moines, to cost $100,000.

The Great Northern Telephone Company of Forest City, Iowa, has been incorporated with $10,000 capital stock, to construct rural lines through the county. Orders have been placed for material and work is to be begun as soon as possible.

The farmers' telephone system, with the exchange at Hudson, Iowa, proposes to extend the lines to Cedar Falls, Iowa. This system has 250 farmers connected. The farmers pay the operator at the exchange, hire a lineman, and each patron pays his own repair bill. The farmers of the vicinity are principally stockraisers, who find that it pays to be in instant touch with the markets. R.

Ohio Telephone Notes.

H. M. Gove has sold his interest in the Millcreek Valley Telephone plant to the City and Suburban Telephone Company of Cincinnati, which gives the latter the control. The toll rates have been reduced from 10 to five cents. Subscribers will be furnished with new instruments and other improvements will be made in the plant. It is probable that a building for the exchange will be erected at Wyoming.

It has been decided to spend about $40,000 in improving and enlarging the Independent telephone plant at Mansfield.

The National Telephone Company will make several important improvements in its plant at North Baltimore, and it is stated that the system will in a short time be connected with the United States lines for long-distance service.

Graffton Baker of Melmore and Harvey Close of Plankton are engaged in organizing a telephone company to connect these towns with several others in that vicinity, as well as with the long-distance lines, probably the Bell.

A reorganization of the Wellsburg Telephone Company, Wellsburg, has been affected, and it will be known in the future as the Wellsburg Home Telephone Company. The officers are: President, Henry Stengle; secretary, Geo. W. Russell; manager, Claude Wyant. Lines will be extended to Brilliant and Wheeling.

The Parkersburg, Marietta and Interurban Electric Company has arranged to operate its trains by means of a regular telephone train-dispatching system.

O. M. C.

Indiana Telephone Items.

The New Long-distance Telephone Company, at the monthly meeting of the board of directors, on Tuesday, declared its regular one per cent. quarterly dividend, payable January 1st to stockholders of record December 25th.

The growth of the business of the New Telephone Company of Indianapolis continues. Even since the completion of its two new branch exchanges, the company is unable to take care of the business coming to it, and will be obliged to erect a new building at the rear of its main exchange.

The Kinloch Long-distance Telephone Company of Missouri has completed its pole line to Terre Haute and will push the work of stringing the wires. It

is expected to be ready to connect with the New Long-distance Telephone Company of Indianapolis at Terre Haute for through service between Indianapolis and St. Louis by February 1st.

Judge Baker of the federal court has issued a temporary restraining order against the city of Evansville to prevent interfering with the rights and property of the Cumberland Telephone and Telegraph Company. Mayor Covert was the only official served with notice. The order is made returnable the first Monday in February before United States Commissioner Wartman. The city has the right to go into court at any time and make answer, and, by giving 10 days' notice, may ask that the restraining order be dissolved. If this course is pursued, the issues will be raised at once; otherwise the merits of the case will be heard the first week in April.

F.

Michigan Telephone Items.

A resolution has been introduced in the Detroit City Council to instruct the corporation counsel to draft a bill for state control of the telephone systems of Michigan, requiring interchangeable service between all. The Bell people claim their contract with the parent company does not permit the connection of their telephones with those of any other make, and that any such law will not be valid.

Two hundred citizens met in Jackson last week and decided to discard the Bell telephones for those of the Independent company. Those who felt they must have connection with Detroit were the only ones who favored the Michigan Telephone Company.

The Citizens' Telephone Company of Grand Rapids has decided to put in an automatic switchboard.

A bill in chancery has been filed by the Central Trust Company of New York in the United States Circuit Court, to foreclose a mortgage given by the Michigan Telephone Company to secure $600,000 of bonds issued by the Detroit Telephone Company, the Michigan company having guaranteed the payment. It is claimed that the Michigan company has failed to develop and carry out the Detroit company's business, but has consolidated it with its own, decreasing expenses, avoiding competition and increasing its income. Default in the payment of interest amounting to $18,000 is claimed, and the Detroit company is declared insolvent.

C. G. W.

Southern Telephone Developments.

The committee on granting a franchise to Mrs. Annie McElroy Brett at Chattanooga, Tenn., will report favorably upon granting the franchise for 21 years, Mrs. Brett agreeing to allow the franchise to become void if $300,000 is not expended in one year, if work is not started in six months and if 2,000 subscribers are not secured.

The Richmond (Va.) Telephone Company has begun the work of putting wires underground. About $250,000 will be expended in the work which, it is expected, will be completed in six months.

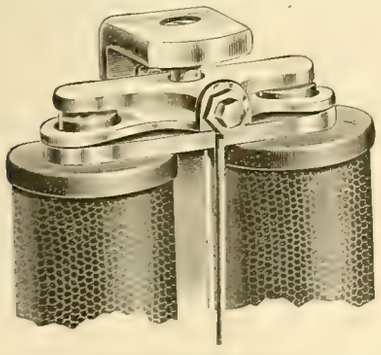
The Asheville (N. C.) Telephone Company is rebuilding the telephone plant at Hendersonville, N. C. A new switchboard is being installed by the Stromberg-Carlson Telephone Manufacturing Company.

The American Long Distance Telephone Company, to operate between Petersburg, Va., and Cheraw, S. C., has obtained a franchise to put in a long-distance station at Fayetteville, N. C.

L.

New Telephone Ringer.

In the accompanying illustration is shown a new ringer, recently placed on the market by the Stromberg-Carlson Telephone Manufacturing Company of Rochester, N. Y., and Chicago, Ill. The ringer is said to embody new and simple features in the matter of adjustment, which in most ringers on the market heretofore has been crude, and in many cases inaccurate. A screw passes through the permanent magnet, armature and armature-frame support, and is threaded into the armature yoke. By turning this screw, a shoulder upon it is made to engage against the frame, which supports the armature, and this, being made of spring steel, allows it to be pressed downward, thus bringing the armature nearer the cores, while the turning of the screw in the opposite direction allows the distance between the cores and armature to be increased. This adjustment is very simple and requires the turning of only one screw, which may be done as easily after the ringer is mounted in a telephone as before.



NEW TELEPHONE RINGER.

GENERAL TELEPHONE NEWS.

The strike of the operators of the Iowa Telephone Company in Des Moines, Iowa, which was in progress for almost six months, was settled recently at a meeting of representatives of the company and of the Trade and Labor Assembly. The telephone girls are to be paid wages 15 per cent. in excess of the union scale, it is said, and all of the girls who struck are to be taken back to work. The company further agrees not to in any way discriminate against the strikers. The injunction suit to restrain the representatives of union labor from boycotting the company is to be dismissed.

A telephone war is on in Cooperstown, N. Y., between the Central New York (Bell) company and an Independent company. For years the Bell company operated in Cooperstown, charging what were considered exorbitant rentals. Townspeople determined to combine and effect a reduction of prices or drive the old line from the field. The village is becoming a network of wires overhead, and tall poles line both sides of the principal streets. One of the opposing companies has offered to install telephones and give six months' service free to its subscribers. Both companies claim to be gaining ground daily.

A novel use of the telephone is reported from Bernardsville, N. J. A constable of Baskingridge had received a complaint that some persons in his neighborhood were breaking the game laws of the state by hunting and shooting on Sunday. With this information, he succeeded in locating the guilty one at a stone quarry, where he was an employe. Forthwith he proceeded to the quarry and made the arrest. The manager of the quarry, being short of workmen, interceded, and an agreement was reached whereby the case would be settled over the telephone. Justice Bowers of Bernardsville responded to the telephone call, and on hearing the case recited by the constable imposed a fine of $20 and costs, which was paid on the spot.

NEW COMPANIES.

The Daisy Telephone Company of Borden, Ind., has been incorporated with a capital of $2,000. The incorporators are W. H. Porter, W. E. Gray, B. F. Stalker and others.

The Sibley Telephone Company of Sibley, Ill., has been incorporated with a capital of $1,000 to operate a telephone system. The incorporators are W. H. Hamilton, A. A. Absher and F. A. Warner.

TELEPHONE MEN.

H. P. Didriksen will in the future have entire charge of advertising, correspondence and general office affairs for the Eureka Electric Company of Chicago. Mr. Didriksen is well fitted for his new position, having been successful in this line of work in other lines of business, as well as in the field of telephony. His energy and enthusiasm should prove valuable in his new position.

At the recent banquet given by the Stromberg-Carlson Telephone Manufacturing Company at the Great Northern Hotel, Chicago, the following-named gentlemen were present: Alfred Stromberg, T. R. Finucane, C. W. Stiger, A. J. Rousseau, H. G. Webster, A. Haubrich, Eugene L. Brown, F. L. Martin, William Bowen, F. L. Middleton, R. B. Tyler, E. C. Lewis, H. B. Hewitt, H. D. Eddy, L. R. Krum, C. E. Knickerbocker, A. S. Munsell, G. A. Muir, Paul D. Meyers, G. H. Pierce, B. B. Willis, H. L. DuPont, G. L. Burlingame and C. H. Hague. Following the banquet, Mr. Bowen, in behalf of the salesmen, presented Messrs. Stiger and Middleton each with a scarf pin with diamond setting. Pleasant speeches were made by the recipients and others. The use of a new book of "Standard Switchboard Specifications" was explained to the salesmen.

MANUFACTURERS AND DEALERS.

The Stromberg-Carlson Telephone Manufacturing Company of Rochester, N. Y., and Chicago, Ill., recently closed a contract with the Southern Electrical Construction Company of Huntington, Ind., for a 2,400-line, full lamp-signal, central-energy switchboard, with a present equipment of 700 lines, for Bowling Green, Ky. The contract includes 700 telephones, a toll board, chief operator's desk and complete power equipment.

Announcement is made that the Haines & Noyes Company has become affiliated with the Couch & Seeley Company, telephone manufacturer, Boston, Mass. The Haines & Noyes Company will in the future be the western department of the Couch & Seeley Company, with offices in Chicago, where a large stock will be carried. The Couch & Seeley Company is one of the largest and oldest telephone manufacturing companies in the East, and its apparatus is well known. The Haines & Noyes Company has been in existence but a little over two years, but it has built up a large business and has become well known throughout the telephone trade. All communications or orders from the West, including the western part of Canada and Mexico, should be directed to the Haines & Noyes Company, western department of the Couch & Seeley Company, 153-157 South Jefferson Street, Chicago.

Weston Instrument Patents Upheld.

An equity action for infringement brought by the Weston Electrical Instrument Company against J. Francis Stevens and Elmer P. Morris, doing business as the Keystone Electrical Instrument Company, has been decided in favor of the Weston company. The suit involves two letters patent granted to Edward Weston for electrical instruments, one being a reissue, No. 11,250, dated June 28, 1892, the other No. 470,340, granted March 8, 1892. The decision was handed down by Judge Coxe of the United States Circuit Court for the Southern District of New York. The following extracts from the opinion of the court will give the gist of the decision:

Mr. Weston was the first to make a successful commercial voltmeter for measuring alternating currents. His voltmeter, soon after coming on the market, superseded all others, and is to-day recognized as the standard instrument for measuring differences of potential in alternating-current circuits.

The device of the patent is small, simple, compact, easily operated and requires no preliminary adjustment. It can be operated at any angle by an unskilled workman, and will measure direct as well as alternating currents.

Strictly speaking, there is no prior art. If the invention be confined to alternating-current devices it can be said with confidence that there were no practical commercial instruments prior to Weston's. There were no instruments entitled to be considered as anticipations. There were two or three instruments, which, as scientific possibilities, could, it is true, reach accurate results; but as everyday working devices they were of little value.

The invention is not disclosed in any prior patent or publication.

Infringement is clear. The defendants have copied the patented instrument even in its minute details. The only difference entitled to notice is the substitution of a V-shaped spring for the upper flat spiral spring of the patent. The two springs accomplish the same result and are unquestionably equivalents.

It appearing, then, that Mr. Weston was the first to construct a commercial instrument to do this exceedingly important work, and that the defendants have appropriated that instrument bodily, it may as well be admitted that the court is not disposed to deprive the inventor of the fruits of his genius and perseverance by subjecting the patent to harsh and technical rules of construction. Few patents that come before the courts are entitled to more liberal treatment. This is a case where, upon the undisputed testimony, the inventor has accomplished something which has been of unquestioned benefit to the electrical world. In an art crowded with indefatigable and brilliant enthusiasts he has made the only successful alternating-current voltmeter in use at the present day. He alone has succeeded, even against the ablest competitors which England, France and Germany could produce.

It is unnecessary to enter upon a microscopic examination of the claims upon the question of infringement, for the reason that if the claims cover Weston's instrument, and it is thought that they do, they cover defendants' instrument also.

Patent No. 470,340, granted March 8, 1892, is for an invention supplemental and subsidiary to the main invention just considered. It is for the improved movable coil of the instrument described in the original and reissued patents.

The defenses are lack of invention and abandonment. Infringement is admitted. The invention is a comparatively trivial one and consists in improvements in the coil conductors of the prior Weston patents. The improvements, inconsequential as they seem at first, produced important results in reducing the error of self-induction and thus increasing the accuracy of the Weston voltmeter. The coil was not only lighter and more compact, but it produced a result which was distinctly an improvement over that produced by the coils of the prior art.

The complainant is entitled to the usual decree for an injunction and an accounting.

American Capitalists Plan Lighting System for Paris.

A coterie of American capitalists, supposedly headed by W. C. Whitney of New York city, is said to be at present interested in a lighting scheme for the city of Paris, France. The idea, as reported, is to secure control of the lighting interests of the city and ultimately to combine the big Paris gas and electric-light companies under one management. The promoters are said to be having quite a busy time of it. In spite of the undoubted improvement which would result from businesslike management of these public utilities, the nationalist majority in the council is almost certain to render any such scheme abortive.

Mr. Michaud, chief of the Bureau of Lighting, in speaking of the possibility of forming such a combine, is credited with having ridiculed the idea, declaring that such an arrangement would not give a solution of the present municipal difficulties. Mr. Michaud intimated that the city of Paris will shortly go into the lighting business on its own account.

The Wautaga Electric Company of Washington County, Tenn., has been incorporated with a capital of $60,000. A. M. Young heads the board of directors.

SPACE TELEGRAPHY.

Marconi Sends Messages Across the Atlantic Successfully.

Success has marked G. Marconi's experiments in transatlantic space telegraphy, several complete messages being transmitted from the station at Table Head, Cape Breton, to the Poldhu station at Cornwall, England, a distance of 2,300 miles, on December 21st. A message was sent from Lord Minto, governor-general of Canada, to King Edward, and Marconi also sent one to the king, to which he received an answer congratulating him on his success. Marconi also sent messages to the king of Italy. Other dispatches of a congratulatory nature were transmitted. Mr. Marconi sent all the messages from the Cape Breton station himself and they were received at Poldhu by Mr. Woodward, chief of the receiving staff at that station. Mr. Marconi received several congratulatory telegrams in addition to those from the kings of England and Italy. One of these, from Edison, read "Congratulate you most sincerely on your success." Another, from Dr. Graham Bell, was as follows: "Hearty congratulations. Rejoice at your success."

Mr. Marconi announced that he first succeeded in transmitting messages from Table Head to Cornwall about a month ago, but it has only been within the last few days that his apparatus has been perfected so that successful transmission could be achieved. The messages sent on December 21st went through without a hitch. After a little organizing the stations will be put in shape for commercial messages, which will be transmitted at the rate of 10 cents a word, or at a press rate of five cents a word. It is calculated that the Marconi company will be able to handle 1,000 words an hour. Some time ago the English government, which controls the telegraph system of the United Kingdom, refused to make connection with the Poldhu station, and this consent, of course, will have to be obtained before land connections in England can be made.

After remaining at Table Head for a short time, Marconi plans to go to the Cape Cod station, where he will superintend the erection of a station for the transmission of commercial business for the New York section. Machinery for the equipment of the station is there awaiting him. The inventor has announced that within a few weeks his station at Cornwall, England, will be equipped with devices which will permit of the transmission of complete messages to this side.

In sending his messages, Marconi made use of his new magnetic detector, which gave complete satisfaction, it is said. When the station is placed in regular operation transformers will be used for the transmitting apparatus. These will raise the voltage of 2,000 generated by a 40-horsepower alternator to 20,000 volts. Other apparatus will be used to raise this voltage to a range of from 50,000 to 70,000 volts.

Collins' Lecture.

Under the caption of "Operative Systems of Wireless Telegraphy," A. Frederick Collins, the well-known writer, discussed before the New York Electrical Society recently the history, theory and apparatus of space-telegraph engineering practice. The history of high frequency, high-potential current, electric waves and the fundamental principles involved in wireless telegraphy from the time Lindsay signaled across the river Tay in 1854 to the sending of messages by Marconi in 1896 was briefly referred to. Open and closed oscillator and resonator circuits and their functions were explained, as well as the application of these methods to systems in practice. The propagation of electric waves was touched upon and the lecturer unfolded the two prevailing theories; the first, that based on Hertz deductions on the propagation of electric waves by means of wires," and the second, on his own experiments "on electric radiation." In the course of the lecture Mr. Collins emphasized his own novel theory that the lack of commercial success in syntonization could be traced to the use of the earth at both transmitting and receiving terminals and the effect of its variable capacity on the tuning of the circuits. He also inclined to the belief that syntonization was not likely to be effected by pure electrical resonance, but that a mechanical element having acoustic resonance properties would be required as an auxiliary to the scheme for tuning.

The lecturer then showed that at the present time there are no less than 10 systems in actual service in this country and abroad, and various theories as well as the apparatus of Marconi, Slaby-Arco, Braun, Guarini, Fessenden and De Forest then engaged the speaker's attention.

It would seem that a greater effort has been made abroad to solve the difficult problem of electrical resonance, while in the United States the trend of effort has been along the lines of more rapid, accurate and economical transmission of intelligence.

The lecture was well illustrated with a number of diagrams of the different systems which were followed alternately with photographic views of the apparatus they represented. In conclusion, Mr. Collins exhibited a fundamental system, having in operation a complete wireless telegraphic equipment with masts and antennæ, leaving little to the imagination. During the course of the lecture a Marconi coherer and a Fessenden wave detector were passed for critical examination.

Developments of De Forest-Smythe System.

Some of the recent work at the De Forest-Smythe wireless-telegraph station at Coney Island is very interesting. On Sunday, December 7th, the operators there on watch for the Hamburg-American liner Deutschland picked up the boat at a distance of 60 miles. The Deutschland carries a Slaby-Arco system, but arrangements have been made with the Hamburg-American company, whereby this steamer communicates with the De Forest wireless station on approaching and leaving New York.

On December 11th the Coney Island station caught messages from the American liner Philadelphia until that vessel was six hours from port, the last message being received perfectly when the boat was 100 miles distant. The Philadelphia is equipped with Marconi apparatus, and the boat was overheard calling up the Babylon station, and later, the Sagaponack station. On several occasions the Coney Island operators have listened to the Sagaponack station calls, over a distance of 80 miles. The remarkable part of this reception is that no transformer, "jigger" or tuning device whatever was used at the Coney Island station; merely the simple aerial conductor, consisting of two stranded copper cables 210 feet in height. As far as known 20 to 35 miles has been the greatest distance recorded for successful transmission without a "jigger" in connection with the receiver, and the fact that these messages were received so successfully without this adjunct speaks well for the extreme sensitiveness and reliability of the De Forest-Smythe "responder," or anti-coherer. The receiver used is only five by four by three inches in size.

While the steamship Deutschland is in dock at Hoboken daily communication is maintained with the De Forest station on the roof of the Chesebrough Building, No. 17 State Street, New York city, notwithstanding the miles of metal warehouses, steel-frame buildings and shipping lying between. This was not, however, possible until the De Forest-Smythe "responder" replaced the regular coherer on the Deutschland station.

The Providence Journal has decided to establish wireless-telegraph communication between Block Island and Newport. The cable connecting the Island has worked very unsatisfactorily for a long time, and the Journal estimates that, as a news-getting agency, as well as a commercial carrier, and as affording an excellent shore station for communication with passing vessels, the Block Island wireless plant will be a good investment. De Forest-Smythe wireless apparatus will be employed throughout. As there is no electric power at either point, the alternating current required by the De Forest-Smythe transmitter will be generated by a 2½-horsepower Secor kerosene engine at each station, driving a special 60-cycle generator. The outfits are identical, in fact, with those which the United States Signal Corps used so successfully during the war maneuvers last fall.

The fishing steamer, J. S. Warden, which leaves New York for deep-sea fishing, now carries a De Forest-Smythe wireless telegraph apparatus, and the fishermen are kept in constant touch with the Coney Island station. As New York business men frequently take a day's outing on board, it has become the custom to send out stock quotations, keeping those interested in touch with the market. This has been found to be an attractive feature. The government stations at Fort Wadsworth, S. I., and Fort Hancock, Sandy Hook, have been completed and turned over to the United States Signal Corps by the De Forest company. Col. H. C. Dunworthy, chief signal officer, Department of the East, who has felt a keen interest in the plan to replace the faulty cable between the forts, and who was largely instrumental in bringing about this improvement, has charge of the two wireless-telegraph stations.

The answer of the De Forest Wireless Telegraph Company to the infringement suit brought by the Marconi company has been filed in the United States Circuit Court before Judge E. Henry Lacombe. Charles Neave and Edmund Wetmore are retained by the De Forest company and prepared the answer in the suit. William Henry Bliss is general counsel for the De Forest company.

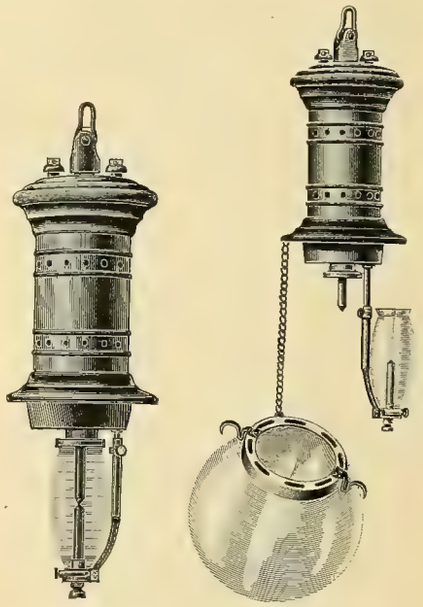
The fundamental patents, three in number, for the De Forest-Smythe space-telegraph system were granted on December 16th. One of these patents has 65 claims and relates particularly to the receiving apparatus. The detector controlling the circuit comprises electrodes, between which is interposed a paste which is composed of an electrolytically-conducting liquid and a porous solid. Solid conducting particles are contained in the paste, the resistance between the electrodes and the detector being normally low and being increased when the detector is subjected to the influence of electrical oscillations, so that the signal device is actuated. One of the other patents describes the method which consists in maintaining electrical pressure in a local circuit, the pressure normally operating to establish conducting paths of comparatively low resistance, and then disrupting the conducting paths under the influence of oscillations produced by the received energy waves and in proportion to the energy of such waves to increase the resistance of the circuit, so that on cessation of the waves a normally low resistance condition is restored in the circuit. The patents are issued to Lee De Forest of Jersey City and E. H. Smythe of Chicago.

Stone Space-telegraph Patents.

John S. Stone of Boston, Mass., is bringing out a system of space telegraphy, and modifications of the system are covered by four patents granted on December 16th. One of the inventions relates to a method of determining the direction of motion of a train of electromagnetic waves, and consists in receiving the energy of the waves in conductors or parts of a conductor, in conveying the electric oscillations thereby produced in the several conductors or parts of a conductor to a suitable electric translating device, and in changing the positions of the conductors or parts of a conductor relatively to the direction of motion of the electromagnetic waves till a position is found in which the combined effect upon the translating devices of the several electric oscillations conveyed to it by the conductors or parts of conductors is nil. Another method patented by Mr. Stone is that of transmitting electromagnetic signal waves and of simultaneously receiving other electromagnetic signal waves. It consists in generating the electromagnetic signal waves to be transmitted by producing electric vibrations in two or more vertical conductors and in receiving the energy of signal waves to be received in vertical conductors placed in lines or planes of interference of the signal waves to be transmitted.

Globe Direct-current Enclosed-arc Lamp.

Improvements are constantly being carried forward in the arc-lamp field, and one of the latest additions is the Globe direct-current, enclosed-arc lamp, manufactured by the Globe Electric Manufacturing Company of Cleveland, Ohio. Some of the features about this lamp which make it desirable for general use are its compactness, extreme simplicity of design and dustproof case. It is easily trimmed and requires little or no attention beyond that. One of its distinguishing features is the contact, which consists of ball bearings, making it practically an impossibility for the carbon to stick. The accompanying illustrations show an indoor lamp and the complete lamp with the globe lowered for trimming. While general efficiency is the object of the manufacturer of this lamp, beauty of design is also taken into consideration. The Globe company also goes extensively into the manufacture of reflectors and arc headlights for suburban trolley cars. Its facilities enable it to fill orders on short notice, a point of importance at the present time, when it is difficult to get good deliveries on this class of apparatus.



GLOBE DIRECT CURRENT ENCLOSED-ARC LAMP.

Transportation Building at St. Louis Exposition.

Henry W. Schlueter of Chicago was awarded the contract for the Transportation Building for the St. Louis Exposition last week, his bid being $692,000. This was the second opening of bids, the first set being rejected because the amounts exceeded the appropriation. Several changes were made in the original plans that brought the bids within the limit. The Transportation Building is the largest in the main group, covering 17 acres, and is exceeded in ground space only by the Agricultural Building, for which 22 acres are allotted.

New Electric-railway Systems.

William B. Potter of Schenectady, N. Y., already well known for his inventions in the line of alternating-current railway systems, has added a new and interesting system to those already patented by him. The new system comprises certain means, whereby an operator on a car may cause the working conductors constituting the conducting system through which current is fed to a motor or motors to be supplied with current from any one of a number of sources, whereby the motor or motors on the car may be caused to run at suitable speeds or to start from or come to rest through suitable gradations in speed.

"In organizing an electric railway to operate in accordance with my invention, I prefer," says Mr. Potter, "in cases where the railroad is of considerable length, to divide the working conductors up into sections. Some of these sections, such as those

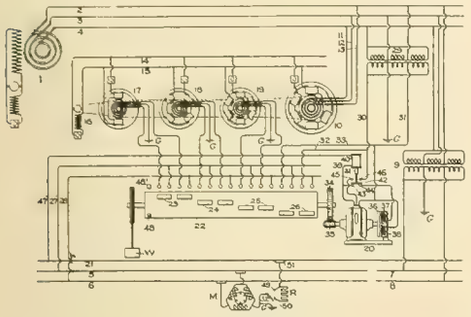


FIG. 1. NEW ELECTRIC-RAILWAY SYSTEMS.—POTTER ALTERNATING-CURRENT SYSTEM.

corresponding to portions of the road where no stops are to be made, are supplied by alternating current at a certain frequency, while other sections corresponding to portions of the road along which stops are to be made are arranged to be supplied with currents of a frequency controllable at the will of the operator on the car. For purposes of economy, as well as convenience, I find it preferable to supply the railroad, as a whole, by means of energy derived from a single central station and to obtain alternating currents of different frequencies by suitably transforming the current derived from the main source."

The accompanying drawing (Fig. 1) illustrates diagrammatically one embodiment of the invention. At (1) is indicated a source of electrical energy—such, for example, as a three-phase alternating-current generator, the particular nature of the generating means being unimportant. Transmission lines (2) (3) and (4) extend therefrom and along the line of the railway. The working conductors from which current is collected and supplied to the motors on the railway vehicles are indicated at (5) and (6). These conductors (5) and (6) constitute a single section, an adjacent section being shown at (7) (8). The section (5) (6) is supposed to represent a portion of the conducting system located near a station or other stopping place, while the section (7) (8) corresponds, on the other hand, to a portion of the road on which no stops are normally made.

When the railway vehicles are on portions of the line between stations—such, for example, as those corresponding to the conductors (7) (8)—they are supposed to operate at full speed. The conductors (7) (8) may therefore be supplied with current of normal and invariable frequency, and to this end suitable connections are made between the transmission lines (2) (3) (4) and the conductors (7) (8). As illustrative of such connections, there is shown a step-down transformer (9) with primary and secondary leads connected, respectively, to the transmission lines (2), (3), and (4) and to the working conductors (7) and (8), one terminal of the secondary being grounded to correspond with the ground connection of the motors representing the return circuit for the three-phase current utilized by the motor.

The section comprising the conductors (5) (6), unlike the section comprising the conductors (7) (8), is arranged to be supplied with currents of different frequencies, the particular means employed being shown partly in diagram and partly by pictorial representation. The alternating currents of different frequencies may be separately generated or produced in a great many other ways; but for the present purpose Mr. Potter proposes to use a generating means consisting of a synchronous motor (10) supplied with current from the transmission lines (2), (3), and (4) and mechanically connected to a number of generators (17) (18) (19) in such a way as to secure suitable gradations of frequency in the currents produced by the generators.

To make suitable connections between the generators of different frequency and the section of the supply system comprising the working conductors (5) (6) of the railway, the inventor makes use of a switch the movement of which is controlled from an electric circuit which may be opened and closed on the railway vehicle as it moves along. In the instance shown the switch is driven by a small induction motor (20), the circuits of which are opened and closed by a relay device connected to a controlling conductor 21, extending along the line of the railway parallel to the working conductors and with which a sliding contact is made by means of a contact shoe carried by the car. One form of a switching device consists of a cylinder (22) mounted in suitable bearings, so as to revolve about its axis, and having thereon a series of angularly and progressively displaced contacts (23), (24), (25) and (26), adapted to engage successively a number of co-operating fixed contact fingers. The cylinder is driven by a three-phase motor (20), the armature of which is locked in any desired position by the magnetic clutch (37) (38).

By an inspection of the diagram it will readily be seen that as the controlling switch is turned the fixed contacts (23) are first to engage their co-operative contact fingers, thereby connecting the generator (17) which is of the lowest frequency with the leads (27) (28), which are joined to the working conductors (5) (6), thereby supplying the working conductors with current of minimum frequency. As the controlling switch continues its movement the generator (17) is cut out of circuit and the generator (18) is substituted therefor, while upon still further movement the generator (18) is cut out and that numbered (19) substituted. Upon completion of the movement of the controlling switch the generator (19) is cut out of circuit and the working conductors connected across the secondary of the transformer (29), thereby receiving current of the same frequency as that flowing in the transmission lines (2), (3) and (4). It is to be understood that the currents derived from the generators (17), (18) and (19) vary in frequency, as well as in voltage, in such a progression as to give the desired rate of acceleration to the railway vehicles as the controlling switch is turned by means of its driving motor.

The circuits of the motor (20) and of the electromagnetic clutch (37) are directly controlled by means of a relay device (39), which in its turn is brought into operation when the operator on the car grounds the controlling conductor (21) in a suitable manner.

The controlling circuit on the railway vehicle consists of a resistance (R), having two terminals connected, respectively, to fixed contacts (49) (50), one terminal of the resistance (R) being also connected to a contact shoe (51), arranged to slide along the controlling conductor (21). A switch (52) is arranged so as to connect either of the fixed contacts (49) and (50) to ground, as shown at (G).

Various important advantages are said to accrue from the use of a system operating in the manner described. Thus, for example, when the frequency of current in the supply system is progressively increased in order to start the motor or motors connected thereto the result, so far as starting torque is concerned, is practically the same in effect as that secured by the use of a variable resistance in the secondary of the motor, without, however, involving the waste of energy incident thereto. There is this difference, however, that with a low frequency, although the starting torque may be made equal to or greater than that at a higher frequency with resistance in the secondary of the motor, the maximum attainable speed of the motor at this low frequency is correspondingly low. To get an increase in speed, it is therefore necessary to increase the frequency, and in the arrangement shown this increase is made progressive, so that the rate of acceleration may have some approximation to uniformity.

In stopping the motors fed from the working conductors the frequency-varying means presents valuable advantages in that it permits the motors to act as generators, thereby serving as powerful brakes, at the same time returning to the line the energy which would otherwise be lost in the brake shoes. If the motor or motors be running at normal speed, then if the frequency of current in the working conductors be reduced by a suitable amount less than that corresponding to the speed of the motors the motors will act as induction generators, since they will then be running at a speed above synchronism. The braking effect which results will then act, of course, to reduce the speed of the motors and the vehicle or vehicles driven thereby, so that the speed of the motors drops until the motors run below the value of speed corresponding to synchronism at the reduced frequency. At or about this time the frequency on the working conductors may be reduced another step, thus repeating the operations described, and this cycle of operations may be continued until the lowest frequency available is brought into use, whereupon the circuit may be interrupted altogther. These changes may be caused to take place at regularly recurring intervals by allowing the switch-operating mechanism to act continuously, or the changes may be made step by step, with any desired interval between each step, by suitably manipulating the controlling switch (52) on the car.

Since the section comprising the conductors (5) (6) and similarly operated sections are normally dead, the controlling conductor (21) is extended along the adjacent sections, so that as a car approaches a normally dead section the operator on the car by closing the circuit of the controlling conductor may bring that section up to normal frequency prior to the time the car runs into that section. When such section is reached, the frequency of current supplied to conductors of that section may be reduced in the manner described.

To Elmer A. Sperry of Cleveland, Ohio, has been granted a patent for a new and economical system of electric-railway propulsion and control. Fig. 2 is a side elevation in part section, illustrating a car and associated parts, illustrating one form of the invention. The car or locomotive consists, preferably, of a metallic framework (A) having ends (B) (B). (Here shown in section.) The locomotive rests in the usual manner upon four or more track wheels (A'). These wheels are in the present instance simply employed as idlers or rollers for the locomotive, the propulsion depending upon the engagement of the sprocket or sprockets (C) (C) with the traction rack (D), which is suitably located between or even outside of the ordinary tram-rails constituting the roadbed, running substantially parallel therewith, but insulated therefrom, and suitably anchored against longitudinal stress. The insulation of the rack (D) is rendered necessary from the fact that in the present device it is used to perform the additional function of transmitting electricity from the source of supply to the car, which it may serve to light, and perform other well-known functions, but principally to energize the elec-

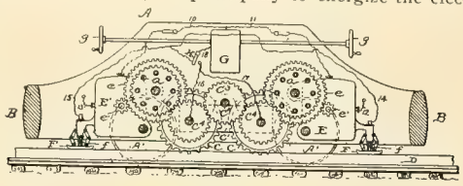

FIG. 2. NEW ELECTRIC RAILWAY SYSTEMS.—SPERRY ELECTRIC LOCOMOTIVE.

tric motor or motors within the car. To this end also it is found essential to insulate suitably the traction sprockets (C) (C) and their metallically connected parts, so as to prevent short-circuiting of traction rack (D), on the one hand, whereas, on the other, it is employed to collect the electricity from such rack and deliver it to suitable translating devices when called upon to do so. This insulation may be effected by securing in any well-known manner to the metallic truck a beam or timber of wood or other similar insulating material (indicated at C'), which in turn supports by any of the well-known means suitable journals for the shafts of the sprockets (C) (C), together with the shaft (C^{11}) of the wheel (C^3), which serves to connect and cause to revolve in unison the two sprockets (C) (C). Upon the shafts of these sprockets are suitable gears (C^4), intermeshing with the intermediate insulating gear (a) (a), which are driven by the electric motors (E) and (E') through the ordinary gear and pinion (e) and (e'), the former being rigidly secured to the gear (a), though insulated therefrom. It will thus be seen that when either one or both motors are operated the sprockets are rotated through intermediate gearing and serve to propel the car by intermeshing with the rack, which may be of any suitable form, the preferred form, however, consisting of a flat-topped perforated structure, which better serves to receive the shoes or current collectors proper.

Mr. Sperry prevents the breaking of the circuit of the teeth and rack by employing a shunt circuit, by means of which the main current or a portion or all of the operating current is handled around the contacting faces of the sprockets and rack teeth, and therefore prevented from passing such teeth, preserving the continuity and integrity of the circuit. The circuit thus being free from interruption serves far better to fulfil its function in actuating the motors, lamps, and other translating devices.

The circuit passes from the controller (G), which may be suitably actuated from either end of the car by the hand wheels (g g), to the motors (E) and (E') by wires (10) and (11), and thence to the ground by wires (12) and (13). The current leaves the rack (D) normally by the collector (F) on wires (14) and (15) to the switch (H), or the current may reach this switch from the sprockets (C) (C) through wires (16) and (17) from the switch to the controller through wire (18). It will thus be seen that the normal current supply to the motor is from the collectors (F), but that an emergency supply may be received from the sprocket (C), or by turning the switch (J) both these devices may be utilized jointly to gather current from the rack (D).

By means of this invention the operation of electric-railway systems, particularly in such places as mines and tunnels, it is stated, is very greatly simplified and made much cheaper and more efficient and satisfactory and permits the adaptation to circumstances and conditions not commercially possible in the ordinary electric-railway system. The arrangement of electrical control illustrated permits an efficient and reliable control of the motor under economical conditions and insures a certain protection and efficient action wholly absent in the ordinary electric-railway systems.

A special meeting of the Philadelphia and West Chester Traction Company is called for January 12th, to increase the indebtedness from $400,000 to $600,000.

Technology School for University of Chicago.

Dr. William R. Harper, president of the University of Chicago, in his quarterly statement, presented at the Christmas convocation, made the important announcement that plans had been completed for the establishment of a school of technology at the university. President Harper said that the demand for instruction in the technological department is becoming more pressing on every side and that the opportunity for developing technological work in the city of Chicago is confessedly a great one, perhaps the greatest in the country. In opening the school the related departments in pure science will be greatly benefited by the development of technological work side by side with them. While it is estimated that the introductory work can be provided at an expense comparatively small, namely $150,000, the money required for the full course and graduate work would be about $3,000,000.

"It is evident," said Dr. Harper, "that the organization of a high-grade school of technology in the various departments is a matter demanding a large expenditure of money and requiring effort which must cover a long period of time. There is an opportunity here in Chicago for a school which shall sustain a relation to technological schools already in existence like that of the graduate work in the university to the colleges. It is such a school that we have had in mind. How soon the university shall be able to carry out its plans is still a matter of conjecture; but it is commonly understood that the establishment of the technological work is the next important undertaking, and, if I am correctly informed, this is the urgent opinion of the faculties of the university, as well as of the board of trustees."

Consideration of Chicago Municipal-ownership Report Postponed.

The report of the special committee on municipal ownership of street railways was discussed by the Chicago City Council at its meeting on December 22d, but the full consideration of the measure was postponed to January 5th. Alderman Finn called the matter up, and several amendments were offered, while Alderman Bennett presented a substitue for the committee's bill. The substitute differs but little from the original, but provides that all contracts in franchise ordinances allowing the city to take over street-railway lines after a certain number of years shall be legal, and makes it the duty of the authorities of the city to take the necessary steps to acquire street-railway property whenever a majority of the voters have declared in favor of it.

Allgemeine-Union Combination in Germany.

Berlin advices are to the effect that the Allgemeine Elektricitäts Gesellschaft and the Union Elektricitäts Gesellschaft have entered into a working agreement which amounts to a practical consolidation. The directors of each company are elected to the directorate of the other, so that the management of both is identical, though the companies themselves remain separate. The step is said to be the result of the crisis in the German electrical industry. After the subsidence of the great boom in electrical companies, it was found that the manufacturing capacity had far outrun the market's demands; hence the efforts, successful in this case, to effect consolidations.

BOOK TABLE.

MAGNETIC DECLINATION TABLES AND ISOGONIC CHARTS FOR 1902, and Principal Facts Relating to the Earth's Magnetism. By L. A. Bauer, chief of division of terrestrial magnetism, United States Coast and Geodetic Survey. Washington: Government Printing Office. Pp. (7¼ by 11¼ inches) 404, with several figures, maps and plates.

This is an exceedingly valuable treatise on magnetism and contains besides the tables and charts a number of papers of general interest. The early history of the compass is treated at some length and the other subjects taken up are the birth of the science of terrestrial magnetism, the earth as a great magnet, the variations of the earth's magnetism, magnetic surveys, the earth's magnetic poles and magnetic moment, determination of the true meridian and the magnetic declination, etc. The volume is a continuation of the series of papers, begun in 1855, treating of the magnetic declination of the United States and published by the Coast and Geodetic Survey. The immediately preceding volume was published in 1897, and in the present volume the tables have been brought up to date and the general information spoken of above added. The frontispiece illustrates the United States Coast and Geodetic Survey Office, and other views show the exterior and interior of the magnetic observatory at Cheltenham, Md.

A news dispatch from Pekin states that China has issued an edict ordering the seizure of all Chinese telegraph lines in order to insure secrecy for government dispatches. Viceroys Chang Chih Tung and Yuan Shih Kai are ordered to ascertain the value of the shares of the telegraph companies and the properties belonging to them.

CORRESPONDENCE.

New York Notes.

New York, December 22.—Probably the most important event in New York's affairs for some time past was the recent granting of the Pennsylvania tunnel franchise by the Board of Aldermen last Tuesday. The franchise was granted by a vote of 41 to 36. The tunnel, as before stated in the Western Electrician, will start on the Jersey side in the Hackensack Meadows and extend under Manhattan Island to Long Island City. It is expected that about five years will be required to build it, and that about $50,000,000 will be spent in the work. The tunnel will cross Manhattan chiefly under Thirty-second and Thirty-third Streets. A monster station will be built between Seventh and Ninth Avenues and Thirty-first and Thirty-fourth Streets.

The traveling public is still incensed over the delays and infrequencies in the car operations on the elevated-railroad system of the Manhattan company. Much unfavorable comment—part of which is undoubtedly unjust—is heard on every hand, and the local papers are publishing long editorials on the failure of the company's officials to do their duty.

Stoppage of traffic followed the short-circuiting of three underground electric cables at Broadway and Vesey Street at eight o'clock Friday morning. It took an hour and a half to make temporary connections, and during that period cars were not running along Broadway south of Leonard Street, or on the East Side electric lines below Canal Street.

Last Wednesday the New York Central, through Eugene E. McLean, submitted its plans for the enlargement of its terminal yards from Forty-second Street to Fifty-seventh Street to the Board of Estimate. These plans are that the company will depress all of its tracks between Forty-fifth and Fifty-seventh Streets to such an extent as to enable the city to carry by viaducts or bridges over the tracks at a grade not exceeding four per cent. such of the intersecting streets from Forty-fifth to Fifty-sixth Streets as may be necessary in the public interest, the expense of extending these streets over the tracks to be borne by the city. It is thought that the Board of Estimate will ask remuneration for the above privileges, as, in all fairness to the Pennsylvania system, the New York Central company should pay for them.

Interesting statistics have been compiled concerning the street-railway traffic of the city. These give data for both the surface and elevated systems, and are, in part, as follows: During the fiscal year ended June 30, 1902, the surface and elevated railways of the city of New York carried 924,754,211 original passengers; that is, passengers paying fares. Counting the transfers, the total number of passengers carried was 1,160,030,344. It has been estimated that the railways carried last year over 1½ billion passengers. This is not the fact, for the reports of the railroads which have been sworn to and filed with the state railroad commissioners show that the surface railroads, excepting steam, and including the elevated roads, did not in the aggregate carry to exceed a billion and a half passengers.

The American Electrical Specialties Company of New York has been incorporated with a capital of $50,000. The board of directors includes James Jones, Jr., and Julius Silverman. O.

New England News.

Boston, December 19.—The Sandwich (Mass.) selectmen have granted a location to the Middleboro, Wareham and Buzzard's Bay Street Railway Company, which will build from Sandwich Depot to the Bourne line as early as possible in the spring. The Sandwich, Hyannis and Chatham Street Railway Company has been organized by people connected with the Middleboro, Wareham and Buzzard's Bay company, and will build an electric railway from Sandwich, Mass., to a point near Chatham light on Cape Cod, a distance of 45 miles, reaching towns on the south side of Cape Cod. The new company will have a capital of $500,000.

The Massachusetts Electric Companies has contracted for 10 2,000-kilowatt, turbo-alternators, to be placed in its power stations. The corporation will build stations at Quincy, Fall River and Davenport, Mass., and will close some of its smaller stations.

The selectmen of Ashfield and Buckland, Mass., have a petition to the Legislature asking for the incorporation of an electric-railway company, to build a road between Huntington and Conway, Mass. The proposed route is along a highway, three miles of which will be submerged if the city of Springfield decides to use the Huntington water supply, and Springfield officials will probably protest against the company's following this route. At Conway the proposed road will connect with the projected road to Greenfield, thus covering the territory between the Fitchburg and Boston and Albany Railroads. The company proposes to do a freight business.

The heavy snowstorm of last Saturday caused considerable delay on electric railways in this section. On Monday the Boston Elevated Railway Company employed some 600 teams and 2,000 extra men in removing the snow from the streets through which its lines pass. The company estimates that the storm cost it about $35,000.

At its next session the Connecticut Legislature will be asked to grant privileges to a number of electric-railway companies. The Connecticut Railway and Lighting Company wants to build an extension from Milford to Charles Island, a distance of three miles, and it proposes to establish a summer resort at Charles Island, which is situated in Long Island Sound. The Branford Lighting and Water Company desires to extend its road from Branford to Pine Orchard and Stony Creek, six miles. This will be part of the paralleling of the New York, New Haven and Hartford Railroad between New Haven and New London. The New London Street Railway Company wants to build extension to East New London and Riverside Park and the right to furnish light, power and heat to a proposed electric railway in Groton. Two officers of the company which proposes to build the road in Groton, will ask for a charter for an electric railway between Groton, Conn., and Westerly, R. I. They propose to build a double-track road through Poquonoc, Noank, Mystic and Stonington. It is reported that the New York, New Haven and Hartford Railroad Company is behind another scheme for building over this route. The Stamford Street Railway Company wants authority to make several extensions, including one nine miles long, to the New York state line at Long Ridge, Conn., and new lines to Noroton and Greenwich, Conn.

Stone & Webster of Boston have prepared plans for a wharf and power house for the Ponce (Porto Rico) Street Railroad Company.

The Enfield electric-light and power station at Thompsonville, Conn., is being enlarged by the building of an addition to accommodate more boilers and dynamos.

The Holyoke Water Power Company's lighting plants have been transferred to the city of Holyoke, Mass. The price paid was $706,543, which included the cost as determined by the awards and the fees of the commission that set the price. The city began the operation.

At Monday's meeting of the Boston aldermen, Alderman Norris called up his resolution that the city should not pay more than $75 per year per arc light pending the establishment of a municipal electric-lighting plant and that the mayor should ask the Legislature for authority to establish such a plant. In arguing in favor of a municipal plant, Alderman Norris stated that Boston was now paying $52,525 per annum for incandescent lights in its public buildings; that the city had paid $2,897,226 for arc lights during the past eight years; that had the city had a municipal plant during those eight years, the cost for arc lights would have been $1,326,868, or a saving of $1,570,358; that cities that have municipal plants pay an average of $44.54 per arc light per year, the highest price, $57.48, being paid by Chicago; that figuring on the same basis, Boston would have saved $375,000 on incandescent lighting in eight years, and that had Boston established a municipal plant in 1895, when the speaker advocated it, the city would own a plant worth $3,000,000 in 1910, and after that would save $62.97 per lamp per year. The resolution went over to next week's meeting of the board.

The annual meeting of the Massachusetts Electric Companies was held December 17th, with eight stockholders present. Richard Olney, C. E. Cotting, Eugene N. Foss, Percy Parker and C. F. Adams were re-elected trustees to serve three years. The annual report was accepted.

The Hartford and Middletown and the New Haven and Middletown Railway Companies have been organized and the capital stock, amounting to about $3,000,000, has been subscribed. The companies will build electric railways to connect the Connecticut cities mentioned in the titles. B.

Southern Developments.

Charlotte, N. C., December 19.—Capitalists from the North and from the Carolinas have purchased the Green River Narrows, three miles distant, where a 700-foot fall exists in half a mile, and will develop the same and bring the power to Saluda electrically, where a cotton factory and other manufactories will be built.

The promoters of the electric line from Nashville, Tenn., to Clarksville, state that the right-of-way having been secured they will begin work on the line in the early spring.

The town of Huntsville, Ala., will, on January 19th, vote on the question of issuing $20,000 electric-light bonds. The local electric-railway company states that before it will lose money by the establishment of a municipal plant, it will remove to another city.

Estimates have been prepared by Granbury Jackson of Mt. Pleasant, Tenn., for a combined water and light plant at Lawrenceburg, Tenn. A 50-kilowatt dynamo is provided for. The cost will be over $20,000. A bond issue will probably be ordered by the town to meet the expense.

The scheme to develop the big waterpower at Tallassee, near Montgomery, Ala., has proven a great success. The Montgomery Light and Waterpower Company, with $1,500,000 capital issued, and a similar amount in bonds, is the new concern just formed by consolidating two previously existing companies. Henry C. Jones has been the leading spirit in developing the waterpower and engineering the undertaking.

The Marion (S. C.) Water, Light and Power Com-

pany has been commissioned with a capital stock of $100,000. Arthur Dunn and A. N. Walker of Scranton, Pa., and J. W. Johnson of Marion are the incorporators.

The Hamlets (N. C.) Electric Light Company has been chartered, with $100,000 capital. G. O. Sanders is interested. L.

Detroit, Mich.

Detroit, Mich., December 20.—The St. Joseph and Elkhart Power Company is having some trouble in its effort to dam the St. Joseph River for the purpose of furnishing electrical power to manufacturers in South Bend and neighboring towns. The St. Joseph River Navigation Company has taken legal action in the federal courts to prevent the building of the dam which was to be located at a point six miles below South Bend, and which would prevent the plan of that company to navigate the river between St. Joseph and South Bend. It is claimed by the power company that it will cost in the neighborhood of $22,000,000 to make the stream navigable the year round, that the shipping facilities are adequate and that more power is what is needed.

Pennsylvania capitalists have organized in Grand Rapids the Grand Rapids and Chicago Railway Company, to build an electric road to Kalamazoo, Allegan and Benton Harbor.

The Saginaw-Flint electrical railway project is in discouraging straits. The Union Traction Company and the Saginaw Suburban are both reported unable to go ahead, and the recent effort of Saginaw capitalists to construct a line as soon as the weather permits is also a failure. The obstacle in the last instance is the Saginaw-Frankenmuth Electric Railway Company, which asks a large amount of right-of-way, the refusal of which is responsible for the defeat of this project.

The council of Lansing has asked the Hawks-Angus syndicate for better city service, and unless some of the provisions of the franchise are complied with in 30 days it will be subject to forfeiture. The council also gave the Lansing, St. Johns and St. Louis road an extension until March 1st within which to have its line operated with electricity.

The city of Benton Harbor has taken up the question of municipal electric lighting, and a committee was appointed to visit other towns to obtain the necessary information. It is claimed the rate now paid the private lighting company is too high. The contract with that company expires October 1, 1903. C. G. W.

From the Buckeye State.

Cleveland, Ohio, December 20.—The electric-light company at Ottawa has submitted a proposition to the City Council to lease the plant to it at a rental of $200 per month for 10 years.

The Atlantic Dynamo Company of New Jersey has been authorized to do business in Ohio.

A conductor on the Cedar Avenue line in Cleveland derailed his car a few days ago and saved it from being smashed by a freight train on the Nickel Plate road. This is the first time the derailer has been used for some time. The car was crowded.

The question of purchasing the waterworks and electric-light plant at Harrison, Ohio, will be decided by a vote of the people at the spring election. The plant is owned by James A. Graft, who has offered to sell it for $25,000.

The Zanesville Railway, Light and Power Company has completed plans for its new power house, which will be 130 by 72 feet in dimensions and will contain machinery with a capacity of 4,000 horsepower.

The Yost Electrical Manufacturing Company, with a capital stock of $75,000, has succeeded the Yost-Miller Electrical Company of Toledo, having purchased the plant, patents and everything connected with the business. The officers of the new company are as follows: President, J. M. Bour; vice-president, John Renner; secretary and treasurer, George F. Miller; general manager, J. L. Yost. Incandescent-lamp sockets is one of the principal products of the company.

Some of the Cleveland street cars have been equipped with bells at the rear to notify passengers who alight at crossings when another car is approaching on the other track. This will often prevent accidents caused by people walking around the rear of one car directly in front of one coming in the opposite direction. The bell is controlled by the motorman, who is in a position to know when passengers are likely to be in danger.

The Central Electric Company of Cincinnati has been incorporated with a capital stock of $10,000 to manufacture electrical machinery. Walter E. Fleming, W. E. Forshee and others are interested.

The Witzler Electric Light Company of Perrysburg has been incorporated with a capital stock of $10,000. C. F. Chapman, W. B. Duck and others are the incorporators.

Dr. Alois Zeckendorf, superintendent of the Fleischmann Distillery, Cincinnati, has invented an electric glove and shoe, designed to be worn by motormen on street cars. It consists of a glove or shoe with woolen lining, underneath which is coiled finely spun wire. A mild current of electricity is passed through this by means of attachments to the current, but it is said the articles are so made that it is impossible for the motorman to receive a shock from it. The street-railway officials have advised the gentleman to secure a patent on the device and believe it will be practical. O. M. C.

Information from Indiana.

Indianapolis, December 22.—The advent of winter in its mild form is proving conducive to electric-railway construction all over the state, and the work on a half dozen lines is farther advanced than was hoped for by the most sanguine promoters.

The Indiana Southern Electric Railway Company of Aurora filed articles of incorporation last week with an original stock capitalization of $10,000. This may be increased by resolution. The company proposes to build and operate a street railroad in Aurora and an interurban road between Aurora and Rising Sun, and to furnish electric light, heat and power to those and intervening cities. The incorporators are E. W. Swarthout, C. W. McMullen and others.

As predicted, the Indianapolis, Lebanon and Frankfort Traction Company, at a meeting last week, changed its name to the Indianapolis and Northern Traction Company, and reincorporated with a capital stock of $2,500,000, with the privilege of a further increase to $3,000,000. The officers of the new corporation are: President, George Townsend, Indianapolis; vice-president, P. L. Saltonstall, Boston; secretary, Winthrop Smith, Boston; treasurer, W. S. Reed, Indianapolis. Work on this system began last April, and the Indianapolis-Lebanon branch is nearly completed. The Frankfort and Lafayette branches will be built in the order named, and the entire system is expected to be in operation before December, 1903.

There is a spirited fight on hand at Kokomo, where five franchises are being asked from the City Council. The petitioners are George J. Marrott of Indianapolis, who wants a 30-year extension of his Kokomo street-railway and electric-light franchises and a franchise for steam heating, and George F. McCulloch of Anderson, who wants a 30-year franchise for an electric-lighting system and for certain concessions for his interurban line, for which the city has already granted a franchise.

The municipal electric-light plant of Richmond is still a source of annoyance to the city administration. The council has ordered the Electric Light Commission, which has full power, to make a thorough investigation of the management, and the capacity and imperfections of the plant.

The Hercules Electric and Manufacturing Company of Indianapolis has been incorporated with a capital stock of $10,000. The company will manufacture electric generators, machinery and apparatus. S. J. Kurtz, A. H. and F. H. Blackleye constitute the incorporators. F.

Northwestern Notations.

Minneapolis, December 20.—The Electric Light and Power Company of Hastings, Minn., will change its system of street lighting, and will install 30 enclosed arcs of 2,000 candlepower for $150 a month. Four are to burn all night and the remainder are on the moonlight schedule.

The installation of meters at Fergus Falls, Minn., has reduced the consumption of electricity in a marked degree. The superintendent finds that about 70 less horsepower is required to run the lights this year than last, which is equivalent to a reduction of about 700 lights. About 800 new lights have been added for new buildings, so that the actual reduction is considerably more than 700. There is now plenty of power to run the system, and the revenue coming in is greater than the flat rate produced.

It is reported that all arrangements have been completed and contracts let for the construction of an electric interurban line between Iowa City and Cedar Rapids, Iowa. Grading will begin as soon as the frost is out of the ground and will be rushed to have the line completed before the summer is over. It is expected to have the line in operation by July 1st.

The stockholders of the Union Electric Company of Dubuque, Iowa, have decided to erect an entire new plant at a cost of $200,000. It will be one of the largest in the West, and will contain all the latest features available.

S. Stewart of Morris, Minn., has asked the council to permit him to string wires on the telephone poles to supply the business portion of the city with lights. The Fowler Electric Company, which has a franchise for lighting the town, objects to the request.

Business men of Des Moines are complaining over increased charges made by the Edison Electric Light Company there. The charge for elevator power, which has been $2.50 per kilowatt, has mounted up to $7 in some cases, the company stating that such business was not desired, as it imposes a heavy strain on the plant. Bills for lighting show a tendency to grow beyond previous years. The company has the field alone, and the result is considerable talk of a municipal plant.

The council of Perham, Minn., has raised the minimum rate for electric lighting from 25 to 50 cents per month.

The Great Northern Railway Company expects to develop power from the Tumwater Falls in Washington, using the electric power to operate its trains through the long Cascade tunnel. The tunnel is about 2½ miles long and the engines leave gases and smoke in the tunnel that in several instances have been fatal to the crews of the locomotives. To obviate this, the company will not run engines through.

The mayor of Spearfish, S. D., is in a controversy with the council over a proposed extension of the electric-lighting system. A resolution passed the council providing for more light, but was vetoed by the mayor, who declared there was no provision in the annual appropriation for the increased expense. The councilmen threaten to carry the resolution over the mayor's veto.

Waterloo, Iowa, is considering a project to install a city lighting plant.

L. W. Reynolds announced at Boone, Iowa, that an electric railroad would be built by eastern men from Boone to Webster City and Fraser, about 65 miles. After this is completed, the road would be extended to Minnesota and the lake region.

The Belt Light and Power Company has about completed a new power building at Lead, S. D., which is built over the old building without interfering with the operation of the plant. Considerable new machinery has been ordered and will be installed at once. The company has extended its lighting system from Lead to Terraville and Central City.

The board of water commissioners of St. Paul has filed suit against the St. Paul City Railway Company to recover damages of $500,000 for injuries alleged to have been caused by electrolysis to the city water pipes. The court is asked to restrain the company from using the mains for conveying the return current. The complaint states that the company is able to avoid the leakage of the return current by instituting the double-trolley system.

Verndale, Minn., offered free wiring for all orders for electric lighting received before January 1st, and received orders for over 300 lights almost at once. The new plant is approaching completion and the wiring will be done as rapidly as possible.

Winona, Minn., will take bids at once for the installation of a municipal electric-lighting plant. A system equal to 390 arc lights of 1,200 candlepower is projected. The estimated cost is about $40,000.

The Creston Electric Railway, Light, Heat and Power Company announces that the proposed interurban line from Creston to Winterset, via Leith City and Macksburg, will be completed and in operation by January 1, 1904. Contracts have been awarded to the Collins Construction Company of Chicago, which will proceed with the work in the spring.

Business men of Calumet, Mich., have organized a company to maintain a heating and lighting plant. The village retains the right to purchase the plant at the expiration of five years or at any five-year period thereafter.

The earnings of the municipal lighting plant of Marquette, Mich., for November of this year exceed all previous records, reaching a total of $3,368, an increase of 12 per cent. over the preceding month. In November of 1901 the receipts were $2,868.

Grinnell, Iowa, will vote January 16th on granting a new franchise to the Grinnell Electric and Heating Company. The company seeks to make extensive improvements to its plant.

B. Pulford of Savanna, Iowa, will erect a new power building for his electric-light plant and will add a new Corliss engine and a 5,000-light dynamo. The plant is to be completed in the spring.

The Twin City Rapid Transit Company has completed a supplementary power plant on Selby Avenue in St. Paul, adding about 1,200 horsepower, and it is thought that it will not be necessary to curtail the service again, as has been the case for several weeks, owing to low water in the river.

The council of Moorhead, Minn., has granted a franchise to the proposed street-railway company. It must be ratified by the voters before it becomes effective.

The Aberdeen Gas Company of Aberdeen, S. D., controls the electric-light and gas systems of that city. The company asks a new franchise in order to make extensive improvements to both plants, that to the electric-light plant to cost $30,000. R.

Canadian Intelligence.

Toronto, December 20.—The City Council has appointed W. T. Jennings, a former city engineer, to prepare a special report on the best way of letting the radial electric railways into the city. He is said to favor the third-rail proposition, by which the gauges of the Metropolitan and Toronto railways would be harmonized.

An agreement has been reached between City Engineer Rust and Manager Keating of the street-railway company, as to the terms upon which the company stands prepared to construct a loop line on Lake Street, which is to be built and ready to accommodate the steamboat traffic in the spring. This will include the proposed overhead bridge at the foot of Young Street which the city will have to build, and which the city wants the railway company to contribute towards the cost of, but the company thinks it should have the right to extend its tracks and service across the proposed bridge free of all additional expense. The city will pay all expenses in connection with the work except the expense of supplying the rails and laying the same. The company is not to be called on to operate the service during the winter months, or when the steamboats are not running. Ordinary "T" rails are to

be used in the extension, and the company is not to be called upon to take up these rails for a period of four years, and after that only in the event of the city deciding to lay down a permanent pavement.

The Hamilton and Barton incline electric railway, under a new decision of the Hamilton judge, is to be assessed as scrap iron and not as a street railway. H.

PERSONAL.

A. A. Serva of the Fort Wayne Electric Works, Fort Wayne, was among last week's Chicago visitors.

A. P. Munning of the New York office of the Cutler-Hammer Manufacturing Company was in Chicago last week in the interests of his company.

William Henry Spencer, for the last 15 years chief operator of the Western Union Telegraph Company at St. Louis, Mo., died in that city on November 28th, after a long illness.

H. D. Handford, who has been connected with the Puget Sound Electric Railway Company, has removed to Indiana and been appointed constructing engineer of the Noblesville branch of the Indianapolis-Northern Traction Company.

C. O. Fitch, electrician of the Cudahy Packing Company of Omaha, Neb., has resigned his position to accept an appointment as superintendent of power and wires for the Hudson Valley Railway Company, with headquarters at Glens Falls, N. Y.

E. J. Lavens, formerly connected with the General Incandescent Arc Light Company, will assume entire charge of the panel-board, switchboard and switch departments of the Bossert Electric Construction Company of Utica, N. Y., on January 1st.

General Wager Swayne, general counsel for the Western Union Telegraph Company and the Wabash Railroad Company and located in New York, died on December 18th, at his home in that city. General Swayne was born in Columbus, Ohio, in 1834. He was educated at Yale, afterward studying law at the Cincinnati Law School.

Emmett Howard, who retired from the management of the Western Union Telegraph Company's office at Memphis, Tenn., on December 1st, held that position for over 21 years, entering upon its duties in 1881. Mr. Howard made a host of friends while filling his position with the Western Union company. He will take up other business in Memphis and continue to make his home there.

Dr. H. Preston Pratt, a well-known Chicago investigator in skiagraphy, has been appointed X-ray expert and electrical diagnostician of the law department of the city of Chicago, by City Attorney Owens. Mr. Owens says that this office has become necessary on account of numerous attempts at fraud through the evidence of X-ray and electrical so-called "experts" in claims against the city for personal injuries.

The Massachusetts Institute of Technology Corporation has chosen Elihu Thomson, the well-known electrician, as non-resident professor of applied electricity, and Percival Lowell, director of the Lowell Observatory at Flagstaff, Ariz., as non-resident professor of astronomy. The appointees will give courses of lectures on their chosen subjects. Professor Thomson has been a lecturer at the Institute for several years.

Henry A. Everett took charge of the Toledo Railway and Light Company as president last week, succeeding Albion E. Lang, who resigned to take a rest and make a tour of the globe. A pleasant incident in connection with the transfer of the office was the presentation of a very handsome watch to Mr. Lang by the men in his employment. The committee went to the directors' office while the board was in session, and Thomas McMahon, a conductor, made one of the prettiest little addresses that those present had heard in a long time.

Charles P. Griffin, president of the Toledo and Indiana Electric Railway Company, died suddenly at his home in Toledo on December 18th, after a short illness. The road had just been opened, and Mr. Griffin was devoting all his energies to secure its completion to Wauseon at an early date. The deceased did not become interested in electric railways until a few years ago, but since that time he has given them a great deal of time, and the Toledo and Indiana will be a monument to his name. A wife, one son and two daughters survive him.

At the annual meeting of the Engineers' Club of St. Louis recently the annual prize, consisting of $50 in gold and an engraved certificate, was awarded to Henry H. Humphrey for the best paper presented to the club during the closing year. This paper was entitled "On the Use of Beaumont Oil as Fuel." Mr. Humphrey is the consulting electrical and mechanical engineer of St. Louis who established more than a local reputation by designing, during 1901, a complete power plant of 1,500 horsepower for the DeBeers Explosive Works at Cape Town, Africa.

Mr. Francis E. Drake, an American electrical man well known and well liked, has returned to this country after three years' absence abroad. His latest work was the reorganization of the Union Elektricitäts Gesellschaft of Berlin. Prior to that time Mr. Drake was a member of the American Commission to the Paris Exposition and one of the international jurors. Just before leaving Berlin Mr. Drake and his assistant, Mr. C. S. Colton, were tendered a farewell testimonial dinner by the officers of the Union company. At this dinner, over which Herr Commerzienrath Loewe, president of the company, presided, the warmest encomiums were expressed on the work of the guests of honor, and the 40 gentlemen present united in regretting that Mr. Drake felt it necessary to sever the ties that bound him to Germany. Mr. Drake is now in Chicago, where he will remain for a few days.

ELECTRIC LIGHTING.

An electric-light plant, to cost $5,000, will be built at Dallastown, Pa., to supply current for lighting and power purposes.

The Atkinson Heat and Light Company of Atkinson, Neb., has been incorporated with a capital of $5,000. The company purposes to construct and operate electric-light plants. The incorporators are Dell Akin, W. H. Allen, J. P. McNichols and others.

The City Council of Huntsville, Tenn., has called a special election to be held on January 19, 1903. At that time a vote will be taken on the question of issuing $20,000 of bonds for the purpose of building and equipping a municipal electric-light plant.

The United Gas and Electric Company of San Jose, Cal., has ordered a new battery of Babcock & Wilcox boilers and a 900-horsepower engine, the latter to be direct-connected to a new General Electric generator. This will give the plant a total of 12,000 horsepower, which is said to be equal to the output of any plant in the state.

ELECTRIC RAILWAYS.

The Chicago City Railway Company expects to place 80 new cars on its electric lines in Chicago on February 12th. The company's officials state that their service has been hampered by a lack of electric power, but that it is installing machinery for 2,700 horsepower, and when it is ready large cars will be put on the electric lines.

Justice Betts in the Supreme Court has appointed Joseph A. Duffy of New York city receiver for the New Paltz and Poughkeepsie Traction Company, in an action brought against it by the Franklin Trust Company of Brooklyn, to foreclose a mortgage. The receiver's bond was fixed at $40,000. The traction company operates an electric road which crosses the Poughkeepsie Bridge.

The Seattle-Everett Interurban Railway of Seattle, Wash., has been incorporated, with a capital stock of $1,500,000, to operate a trolley system between Seattle and Everett, both in the state of Washington. The trustees and incorporators are M. D. Haynes, James E. McMurray, Fred E. Sander and Charles E. Shepard. The distance between the two termini is 33 miles.

A petition for a rehearing in the transfer cases of the Chicago street-railway companies against the city of Chicago has been denied by the Supreme Court of Illinois. This ends the litigation regarding the transfer cases so far as Illinois courts are concerned, but the cases, it is said, will be taken to the United States Supreme Court. The state Supreme Court some time ago held that the street-railway companies must give transfers on all their lines.

A Pittsburg dispatch states that after keen competition and extended trial of the different systems of train control, the Brooklyn Rapid Transit Company of Brooklyn, N. Y., has awarded the contract for all its elevated trains to the Westinghouse Electric and Manufacturing Company for the Westinghouse electro-pneumatic control. Among the special advantages claimed for this system of control is the feature than any derangement will at once shut off the current and bring the train to a stop. There are said to have been instances recently with some other systems where the power could not be shut off.

The American Railways Company of Philadelphia reports the following earnings for the month of November: Total gross earnings, $94,599, as compared with $73,815 for the same month in 1901; total for the five months commencing with July 1, 1902, $544,058, or $126,111 more than was earned during the same period last year. The company has an authorized capital stock of $25,000,000, of which $3,751,000 is outstanding. The officers of the company, whose headquarters are at Philadelphia, are as follows: President, Samuel G. De Coursey; vice-president, William F. Harrity; secretary and treasurer, C. L. S. Tingley; general manager, H. J. Crowley.

The Union Railway Company of New York city is about to build a large sub-station at West Farms, for which it has purchased from the Westinghouse Electric and Manufacturing Company a large amount of apparatus, including three 1,000-kilowatt, three-phase rotary converters, with starting motors, self-cooling, oil-insulated transformers and alternating-current and direct-current switchboards. The transmission will be at 6,300 volts and 3,000 alternations. The alternating-current switchboard wil be equipped with new type of oil-break, electrically operated switches. The Bayard Street station of the Metropolitan Street Railway Company of New York city is also being equipped with these switches.

POWER TRANSMISSION.

The Hannawa Falls Water Power Company of Potsdam, N. Y., has gone into the hands of a receiver. The receiver, E. J. Page of Syracuse, was appointed by Justice Houghton of Saratoga Springs, who made the order on the petition of a majority of the company's directors who declared that the company was insolvent, and asked for its voluntary dissolution.

The Home Electric Company of Correctionville, Iowa, has been incorporated with a capital stock of $10,000. The company will begin business on January 1, 1903. The corporation purposes to furnish electric power to the Sioux Valley Milling Company, which company is to have a representative on the board of directors. The incorporators are M. H. Harter, N. S. Harper, E. H. Baldwin and E. C. Bailey.

The trustees of the Sanitary District of Chicago are considering the plan to ask the Illinois Legislature to pass a bill this winter authorizing the district to develop the canal waterpower for the use of the city of Chicago. This work will require the expenditure of several million dollars, and the necessary funds will have to be obtained either by the sale of bonds or an increase in the direct tax allowed the Sanitary District. The present bonded indebtedness of the district is $16,300,000, and cannot be increased under the existing revenue laws without action by the Legislature. It is suggested that the Legislature might pass a bill increasing the drainage-board tax from one-half of one per cent. to one per cent.

SOCIETIES AND SCHOOLS.

It is said that the British Association has accepted an invitation from the British South Africa Company to hold its annual meeting in 1905 at Victoria Falls, on the Zambesi River. The company has set aside $35,000 for the expenses of the scientists.

The November bulletin of the Lowell Textile School of Lowell, Mass., contains illustrations of three of its buildings and information concerning the growth of the school. A new course in electricity in charge of E. E. Nelson has been successfully launched. A modern system of electric transmission is being installed in one of the new buildings.

The Massachusetts Institute of Technology, Boston, Mass., will confer the degree of doctor of engineering (Eng. D.) upon students in a graduate school of engineering research to be opened October 7, 1903. Students of marked ability who have received a degree of bachelor of science or have done work equivalent thereto, will be admitted to the school upon proper application and acceptance. Six fellowships of $500 will be open to competition at the opening of the year 1903-04.

The International Association of Municipal Electricians, through its executive committee, announces that several papers covering many subjects of interest to electrical engineers, have already been promised for its next convention. The committee will be pleased to receive any additional suggestions and offers of papers. These suggestions should reach the committee not later than February 1, 1903, and the papers must be in the hands of Frank P. Foster, Corning, N. Y., secretary, not later than July 1, 1903. With a view of increasing the value of its question box, members desiring information on subjects connected with municipal electrical affairs are invited to send their questions to the committee.

PUBLICATIONS.

The Ball Engine Company of Erie, Pa., issues an illustrated circular descriptive of its new steam-engine governor.

Descriptive catalogues for filing, reference, and specification purposes are requested by George Welsby Scott, consulting engineer, 758 The Rookery, Chicago.

"Twenty Chapters of Reasonable Arc-lamp Talk" is the title of a neat little booklet just issued by the Electric Appliance Company, Chicago, which is selling agent for the Adams-Bagnall arc lamps.

An attractive mailing card distributed by the Buffalo Forge Company of Buffalo, N. Y., shows views of the seventeenth-century iron foundry in France and also the metallurgists of antiquity. Various Buffalo cupola blowers and exhausters are illustrated on the reverse of the card.

MISCELLANEOUS.

The Phosphorous Compounds Company has been incorporated in New York state and will do business at Niagara Falls. The incorporators are George M. Prest, Perry J. Fuller and Joseph S. Richards, all of New York. It is also understood Niagara Falls men will be interested. The company will manufacture and handle phosphorous compounds, alkalies, chemicals, etc.

A new form of guy anchor for use in pole-line construction appears on the market. The anchor is designed like a screw, so that it can be placed in position without digging, filling or tamping. This

leaves the ground undisturbed, and hence a tremendous pull can be placed upon the anchor without dislodging it. A 12-inch anchor is acredited with having successfully withstood a pull of 36,000 pounds when bored into five feet of clay.

TRADE NEWS.

The Central Electric Company of Cincinnati, Ohio, has been incorporated with a capital of $10,000. The incorporators are W. E. Fleming, W. O. Kline, W. E. Beggs and J. B. Taylor.

The Putnam Electric Company of Brazil, Ind., has been incorporated with a capital of $200,000. The incorporators are J. P. Bryson, R. N. Bryson, J. N. Halstead and William E. Halstead.

The New Jersey Autolectric Company has been incorporated with an authorized capital stock of $100,000. The incorporators are George M. Babcock, Edward N. Van Vliet and Lyman B. Robinson.

The Nebraska Electric and Fixture Company of Omaha, Neb., has been incorporated with a capital stock of $50,000. The corporation may manufacture motors, dynamos and electrical appliances. Among the incorporators are P. W. Horbach, A. G. Munroe and E. J. Sullivan.

The New York Central Railroad Company has made a contract with the General Electric Company and with Westinghouse, Church, Kerr & Co. for the installation of steam engines and electric alternating-current generators for the Weehawken, N. J. (West Shore terminal) station. The company is expending some $50,000 on its electric plant there.

Interests of the Chas. K. Hill electric supply houses of Pittsburg, Pa., are forming the Crescent Electric and Manufacturing Company. The company will be incorporated on December 30th. The company will capitalize at $12,000, this capitalization to be increased to $50,000 later on. The incorporators and directors will be Charles K. Hill, J. D. McNeil and W. F. Mitchell.

John A. Stewart, for many years connected with the General Electric Company, the Bullock Electric Manufacturing Company and Rossiter, McGovern & Co., has started into business for himself in Cincinnati and Ludlow, Ky., under the firm name of the John A. Stewart Electric Company. Mr. Stewart's company will deal in second-hand electrical machinery of every description, and it has already secured considerable electrical apparatus. The company has leased a three-story factory building, having 150,000 square feet of floor space, at Ludlow, Ky., which will be converted into smelting works for the refining of metals for its own use as well as for the trade. The factory has a large foundry in connection for the production of armature coils and commutator parts. A part of the factory will be used for a second-hand electrical machinery warehouse.

The Curtiss-Crippen Engineering Company, doing an engineering and contracting business for complete installations, with offices in the Monadnock Block, Chicago, is sales agent for the DeLaval Steam Turbine Company and the sales of the DeLaval turbine outfits in this section are being actively pushed by L. F. Mahler, district manager. Mr. Mahler has acted as engineer of installations for most of the European representatives of the DeLaval system, as well as for the American factory. Mr. Mahler is also district manager of the New York Electric Headlight and Train Lighting Company, which uses the DeLaval system. The sets put out by this company take up the space of an ordinary trunk, and are placed in one corner of the baggage car, taking steam from the engine at any pressure. Equipments of this nature are in operation on the Pennsylvania and Pullman systems, and are said to be giving satisfaction. Frank B. Rae, well known to the western engineering fraternity, is consulting engineer of the Curtiss-Crippen Engineering Company.

BUSINESS.

J. H. Fowler, president of the Fowler-Jacobs Company, Chicago, producer of cedar poles and other cedar products, states that his company has done three times as much business this year as last year. This company is said to be one of the largest producers of cedar poles, and has unsurpassed facilities for getting the poles out of the woods. The Fowler company has supplied poles to many of the leading telephone, telegraph, electric-light and street-railway companies, and, judging from present indications, the coming year promises to be productive of a larger volume of business than any previous year.

ILLUSTRATED ELECTRICAL PATENT RECORD.

Issued (United States Patent Office), December 16, 1902.

715,740. Draw Bench. George Baehr, McKeesport, Pa., assignor to the National Tube Company, Pittsburg, Pa. Application filed February 14, 1902.

In an apparatus for forming tubing are combined an electric motor for actuating the drawing mechanism, a generator having two field windings of different carrying capacities and wound in opposite directions, the larger of the field windings being connected in series with the armature of the motor, the windings being so proportioned as to neutralize each other when the motor is running under a friction or light load, and a source of current for exciting the generator fields.

715,741. Interchangeable Direct and Alternating-current Arc Lamp. Malcolm H. Baker, East Liberty, Pa., assignor to the Westinghouse Electric and Manufacturing Company. Application filed March 11, 1902.

The lamp has a movable carbon and a clutch mechanism mounted on a non-vibrating metallic flexible support and placed in operative relation to the carbon.

715,797. Electric Arc Lamp. John A. Heany, Philadelphia, Pa., assignor to the Teter-Heany Developing Company, Charleston, W. Va., and Philadelphia, Pa. Application filed April 7, 1902.

In the lamp are a clutch for feeding one of the carbons, a solenoid controlling the reciprocation of the clutch, a dash-pot provided with a piston adapted to reciprocate readily during normal reciprocation of the clutch and means for checking or braking the abnormal movements of the piston.

715,798. Insulating Metallic Surfaces or Wires. John A. Heany, Philadelphia, Pa., assignor to the Teter-Heany Developing Company, Charleston, W. Va., and Philadelphia, Pa. Application filed April 10, 1902.

The compound consists of asbestos combined with an albumen aluminated borate of lime amalgam.

715,817. Communication With the Aid of Electromagnetic Devices. Isidor Kitsee, Philadelphia, Pa. Application filed June 19, 1897. Renewed April 29, 1902.

In a system of telegraphy are two or more sending and receiving stations, means at the sending station for generating magnetic impulses of opposite polarity, means for carrying the generated impulses between the sending and receiving stations and means at the receiving station for receiving the magnetic impulses.

715,821. Driving Mechanism for Motor Vehicles. Joseph Ledwinka, Chicago, Ill., assignor to the Imperial Electric Motor Company. Application filed February 10, 1902.

Combined with a vehicle wheel is a motor arranged at the inner end of the vehicle-wheel hub and having its armature shaft extended through the hollow axle. Power-transmitting connection is provided for driving the vehicle wheel.

715,827. Rheostat. Frederick Mackintosh, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed May 22, 1901.

The rheostat comprises a number of resistance units having all parts of their length exposed to the air, each unit being supported between two wire screens and mounted on heat-refractory insulating plugs carried by the screens.

715,856. Method of Drawing Butt-weld Pipe. Peter Patterson, McKeesport, Pa., assignor to the National Tube Company, New York, N. Y. Application filed May 14, 1901. Renewed January 2, 1902.

The method of forming butt-weld tubing consists in introducing a tube-blank into a heating furnace, raising its edges to a welding heat, and then drawing the same by means of an electric motor out of the furnace until its front end has entered a welding bell, and then increasing the speed of drawing the blank through the bell.

715,857. Apparatus for Drawing Butt-weld Pipe. Peter Patterson, McKeesport, Pa., assignor to the National Tube Company, New York, N. Y. Application filed May 14, 1901. Renewed January 2, 1902.

There are two motors of different speeds, one of which is permanently geared to the draw chain, and an electric clutch for coupling the other motor to the draw-chain.

715,875. High-potential Insulator. George H. Rupley, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed June 13, 1901.

The insulator consists of two concentric tubes of insulating material with an annular space between them, and a filling of insulating material containing a hydrocarbon in the space.

715,878. Swiveling Trumpet for Telephones. Arthur Schoeler, Elberfeld, Germany. Application filed April 7, 1902.

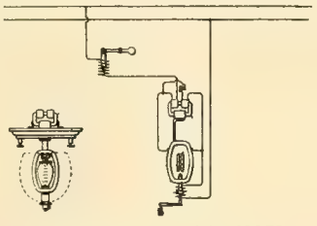
A swiveling bent trumpet is attached to a telephone casing.

715,901. Controlling Electric Arcs. Elihu Thomson, Swampscott, Mass., assignor to the General Electric Company, Schenectady, N. Y. Application filed April 12, 1902.

Combined with stationary electrodes are means for starting an arc between the electrodes, a coil for controlling the arc, and means for supplying the coil with a current due to the differential action of two currents, one flowing in shunt to the arc and the other in series therewith. (See cut.)

715,920. Electric Battery. David H. Wilson, Chicago, Ill. Application filed April 30, 1902.

The electrode comprises two cups or receptacles integral with each other and separated by a suitable space, the cups or receptacles opening in opposite directions.



NO. 715,901.—ARC CONTROLLER.

715,930. Transformer for Polyphase Alternating Currents. Emil Ziehl, Berlin, Germany, assignor to the Berliner Maschinenbau-Actien-Gesellschaft, vorm. L. Schwartzkopff, Berlin, Germany. Application filed June 20, 1902.

There are two longitudinal cores, end bridges and intermediate connection bridges with coils placed on both longitudinal cores, the coils of each phase being placed opposite one another partly on the one and partly on the other longitudinal core.

715,975. Controller for Electric Motors. Eugene R. Carichoff, East Orange, N. J. Application filed August 1, 1901.

In the controller combined with the controller cylinder and driving means for imparting motion thereto, are a notched wheel and spring pawl for intermittently and yieldingly retarding the rotation of the cylinder, and a torsion spring for transmitting in either direction to the cylinder quicker impulses of motion than those given by the driving means, a portion of the driving means lying normally between and adapted to engage either end of the spring to place it under tension.

715,983. Trolley Wheel. Leonard Chroninger and John E. Adams, Findlay, Ohio. Application filed May 21, 1902.

The trolley has a specially formed wheel.

715,999. Telephone System. William M. Davis, Chicago, Ill., assignor to the Stromberg-Carlson Telephone Manufacturing Company, Chicago, Ill. Application filed June 17, 1901.

See page 466.

716,000. Apparatus for Communicating Signals Through Space. Lee De Forest, Chicago, and Edwin H. Smythe, Freeport, Ill., assignors to the Wireless Telegraph Company of America. Application filed July 5, 1901.

See page 468.

716,008. Working Zinc and Substances Containing Silicic Acid in Electric Furnaces. Alfred Dorsemagen, Wesel, Germany. Application filed August 24, 1901.

A method of working a zinc silicate ore consists in preparing a charge of zinc silicate and carbon, then subjecting the charge to the action of an electric current sufficient to determine the reduction and volatilization of the zinc and the formation of carbide of silicon, and then suitably condensing the products of reduction and volatilization.

716,033. Overhead Electric Carrier and Hoisting Device. Henry M. Harding, New York, N. Y. Application filed January 16, 1902.

In the device are combined a motor, a track on which the motor travels, an arm depending from the motor, the lower end of the arm being bent at an angle, and an electric hoisting device supported on the angular portion.

716,048. Electric Heater. Joseph H. Jenkins, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed April 24, 1897.

The heater comprises a flexible core bent into a series of alternate helical coils and bends or loops, a resistance wire helically wound about the respective helical coils of the core, and means for supporting the core at the respective bends or loops thereof.

716,056. Storage Battery. Edgar J. Knapp, Chicago, Ill. Application filed May 19, 1902.

A storage-battery plate is provided with constraining means at its corner portions for maintaining it in its normal plane against buckling or curling tendencies, the means being in the form of corner caps.

716,065. Automobile. Joseph Ledwinka, Chicago, Ill., assignor to the Imperial Electric Motor Company, Chicago, Ill. Application filed January 31, 1902.

A motor member is arranged at the inner end of the wheel-hub of one of the wheels. There are means for mounting the motor member so that it in effect forms a single unitary structure with the wheel axle, and a pivotal connection between the unitary structure and the axle member, whereby the motor member and wheel together can be turned relatively to the axle member. (See cut on next page.)

716,101. Electric Railway. William B. Potter, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed April 28, 1900.

See page 469.

716,102. Compounding Dynamo-electric Machines. Edward B. Raymond, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed October 31, 1896.

Combined with an electric circuit of a shunt transformer are a series transformer shunted by a phase-shifting device, and a circuit connecting the secondaries in series, with their electromotive forces in partial opposition.

716,103. Electric Measuring Instrument. Robert H. Read, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed May 20, 1901.

The instrument has a current-carrying conductor mounted for lateral movement in a narrow gap between the poles of a magnet, the conductor being fixed at one end and connected at the other with an indicating device.

716,113. Driving Mechanism of Motor Cars. Albert Schmid, Havre, France. Application filed January 28, 1902.

The mechanism comprises an internal combustion engine, a dynamo having a double-wound armature and driven by the engine, the dynamo having two commutators and two sets of brushes, a pair of electric motors connected to the dynamo and arranged to drive the vehicle, and a controller arranged to change the connections of the dynamo.

716,125. Electric Railway. Elmer A. Sperry, Cleveland, Ohio. Application filed October 20, 1902.

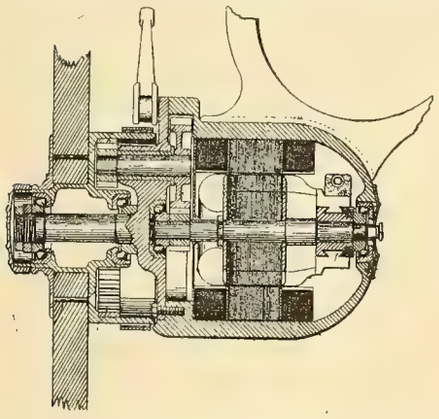
See page 469

716,130. Alternating-current Electric Meter. Chas. P. Steinmetz, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed February 11, 1898.

The method of registering a predetermined proportional amount of wattless current in an alternating-current circuit consists in producing in one or more of the coils of an electric registering or indicating instrument an inductive reactive effect and a resultant relative shifting of the actuating magnetomotive forces, corresponding to the proportionate amount of wattless current to be measured, and actuating properly adjusted registering or indicating mechanism, by the magnetomotive forces due to the currents in the coils of the instrument. (See cut.)

716,131. Electric Regulator. Charles P. Steinmetz, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed March 24, 1902.

A machine adapted to generate alternating currents is combined with means traversed by currents from the machine and responsive to the frequency of the currents and to the load on the machine for regulating the speed of the machine.



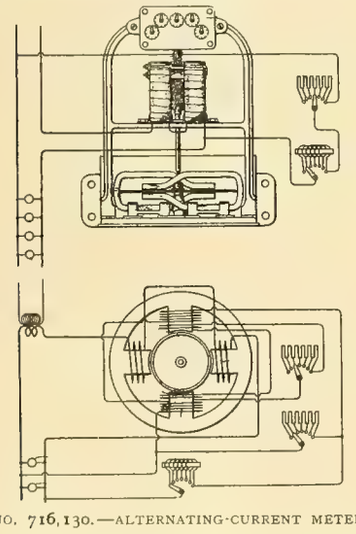
NO. 716,065.—AUTOMOBILE.

716,134. Method of Determining the Direction of Space-telegraph Signals. John S. Stone, Boston, Mass., assignor to Louis E. Whicher, Alexander P. Browne and Brainerd T. Judkins, trustees. Application filed January 23, 1901.

For this and three succeeding patents see page 468.

716,135. Apparatus for Determining the Direction of Space-telegraph Signals. John S. Stone, Boston, Mass., assignor to Louis E. Whicher, Alexander P. Browne, and Brainerd T. Judkins, trustees. Application filed January 23, 1901.

716,136. Apparatus for Simultaneously Transmitting and Receiving Space-telegraph Signals. John S. Stone, Boston, Mass., assignor to Louis E. Whicher, Alexander P. Browne and Brainerd T. Judkins, trustees. Application filed January 23, 1901. Renewed February 24, 1902.



NO. 716,130.—ALTERNATING-CURRENT METER.

716,137. Method of Simultaneously Transmitting and Receiving Space-telegraph Signals. John S. Stone, Boston, Mass., assignor to Louis E. Whicher, Alexander P. Browne and Brainerd T. Judkins, trustees. Application filed January 23, 1901. Renewed February 24, 1902.

716,155. Electric Cable. Julius H. West, Berlin, Germany. Application filed September 21, 1901.

The cable comprises a zigzag strip of insulating material provided with notches and wires in the notches.

716,178. Railway Signaling System. Henry Bezer, New Rochelle, N. Y. Application filed November 25, 1898.

In the system are a normally closed circuit including a pair of opposed electromagnets, a shunt circuit including one of the electromagnets and excluding the other, and an armature between the electromagnets. The electromagnets and armature are so constructed that the attractive force of the electromagnet excluded from the shunt circuit will normally preponderate in all positions of the armature.

716,179. Railway Signaling System. Henry Bezer, Kingsland, N. J. Application filed December 6, 1899. Renewed May 16, 1902.

The rails of a track are combined with a non-polar relay having opposed coils and an armature between the coils, the relay having its opposed coils connected in series with such rails, and means for sending an electric current differentially through such coils.

716,186. Combined Telephone and Telegraph System. Charles E. Buell, Camden, N. J. Application filed February 26, 1902.

716,189. Motor-control System. Frank E. Case, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed June 3, 1901.

The inventor describes a motor-controller consisting of a group of independent elements arranged to control both the direction of rotation and the speed of one or more motors, each of the elements comprising a single set of contacts connected to the motor circuit, and means for actuating the same.

716,193. Dynamo-electric Machine. Oliver F. Conklin, Springfield, Ohio. Application filed August 11, 1902.

In the armature are combined the coils support and commutator. A fan is placed between the support and commutator, and there are openings through the support forming the intake for the fan, and coils on the support also supported by the fan and arranged with openings forming the discharge for the fan.

716,200. Controlling Electric Motors. Maxwell W. Day, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed November 2, 1899.

A combined magnetic and friction brake for electrically driven devices is described. It comprises connections for short-circuiting the propelling motor when the supply circuit is broken, a friction brake, a coil holding the latter released when the circuit is closed, and an auxiliary releasing coil controlled by current in the short-circuit.

716,203. Wireless Telegraphy. Lee De Forest, Chicago, and Edwin H. Smythe, Freeport, Ill. Application filed September 1, 1900.

See page 468.

716,206. Inductance Coil. Friedrich Dolezalek, Halensee, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Berlin, Germany. Application filed July 19, 1902.

The coil has a magnetic core, and a winding surrounding the core and composed of a number of fine wires enveloped in a common insulating covering.

716,222. Rheostat. John L. Hall, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed June 27, 1901.

The rheostat is provided with a retractile switch arm, a spring actuated detent on the arm, a frame co-operating with the detent pivoted to yield in the direction of strain on the arm and adapted to engage the switch in different positions, and electromagnetic means for releasing the engagement.

716,243. Safety Apparatus for Hoisting Engines. Jaroslav Karlik, Gottesberg, and Martin Witte, Waldenburg, Germany. Application filed May 17, 1902.

Means are electrically operated by the explosion of a cartridge for actuating a brake.

716,252. Electric Brush. Robert D. Laughlin, Ravenna, Ohio, assignor to the National Carbon Company, Cleveland, Ohio. Application filed May 10, 1902.

A laminated electric brush is composed of alternate layers of carbon and plumbago.

716,263. Speed Indicator. Laurence Mott, New York, N. Y. Application filed February 11, 1902.

One claim reads: In a speed indicator the combination of a rotary support, a relatively fixed support, conductors forming parts of a circuit and carried respectively by each of the supports, an electric lamp on the fixed support controlled by the circuit, continuously contacting conductors on the respective supports for preserving the continuity of the circuit between the supports, a centrifugally actuated device on the rotary support, and contacts on the rotary support included in the circuit and adapted to be brought together by the device, whereby a continuous illumination of the lamp is secured when the contacts are together. (See cut.)

716,278. Cooling Dynamo-electric Machines. Henry G. Reist, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed June 26, 1901.

The machine has casing heads provided with radial ribs, thin partitions secured to the ribs with openings at the outer and inner edges, and means for causing the air in the casing to flow radially inward between the heads and the partitions.

716,293. Supervisory Signal for Telephone Exchange Systems. Charles E. Scribner, Chicago, Ill., assignor to the Western Electric Company, Chicago, Ill. Application filed April 1, 1901.

See page 466.

716,301. Signaling. Raymond C. Spaulding, Montclair, N. J. Application filed January 29, 1902.

A sound-producing device, actuated by fluid pressure, is combined with a light-producing device located in the electric circuit, a switch controlling the circuit and light-producing device, means for producing fluid pressure to operate the sound-producing device, and means whereby the pressure operates the controlling switch simultaneously therewith.

716,302. Combined Telephone, Telegraph, Electric-light and Power System. Alexander M. Stark, Toronto, Canada. Application filed July 12, 1901.

716,305. System of Electrical Distribution. Charles P. Steinmetz, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Application filed May 19, 1902.

There are combined constant-potential multiphase mains, constant-current mains and means possessing capacity but insensitive to harmonics for transferring energy between the mains.

716,306. Process of Electrolytically Preparing Metals and Alloys for Lithographing Purposes. Otto C. Strecker, Cologne, Germany. Application filed April 19, 1900.

Part of the process consists in submitting the plate as an electrode to electrolytic action in a solution of salts and gum-arabic.

716,311. Electrical Conductor. Elihu Thomson, Swampscott, Mass., assignor to the General Electric Company, Schenectady, N. Y. Application filed May 23, 1902.

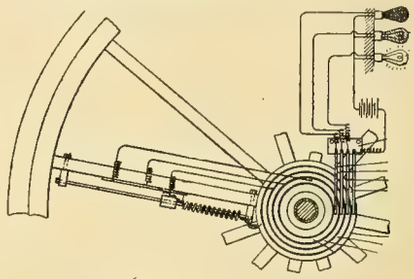
A compound electrical conductor is composed of elements having temperature coefficients of opposite signs and proportioned in amount, relatively to each other, so that the variation of resistance of one element with temperature compensates for the opposite variation of resistance of the other element.

716,314. Igniter for Hydrocarbon Engines. William W. Tuck, Richmond Hill, and August Wassmann, Astoria, N. Y., assignors to Abbot Augustus Low, Brooklyn, N. Y. Application filed December 18, 1901.

An electric igniter is described.

716,329. Antiseptic Protector for Telephone Mouth Pieces. Robert I. Willmarth, San Francisco, Cal., assignor to Adam Bergman, Sacramento, Cal. Application filed February 13, 1902.

In combination with a telephone mouthpiece is a disk of absorbent material across the front entrance of the mouthpiece, saturated with a disinfectant.



NO. 716,263.—SPEED INDICATOR.

716,334. Method of Communicating Signals Through Space. Lee De Forest, Jersey City, N. J., and Edwin H. Smythe, Chicago, Ill., assignors to the Wireless Telegraph Company of America. Original application filed July 5, 1901. Divided and this application filed August 4, 1902.

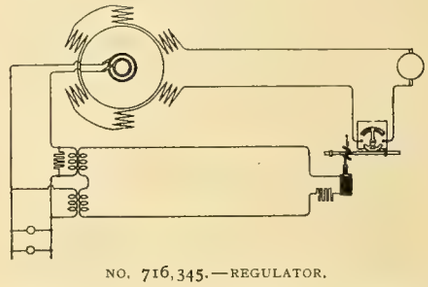
See page 468.

716,345. Compounding Dynamo-electric Machines. Edward B. Raymond, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Original application filed October 31, 1896. Divided and this application filed April 26, 1902.

The method of regulating a main circuit consists in applying to a secondary circuit in series two alternating electromotive forces, one dependent upon the voltage of the main circuit, and one upon the current in the main circuit, the two electromotive forces being dephased by an angle greater than a right angle, and compensating by the variation of current in the secondary circuit for the variation of electromotive force in the main circuit caused by shifting of phase of current in the circuit. (See cut.)

716,351. Alternating-current Electric Meter. Chas. P. Steinmetz, Schenectady, N. Y., assignor to the General Electric Company, Schenectady, N. Y. Original application filed February 11, 1898. Divided and this application filed April 28, 1902.

In the wattmeter are combined the actuating coils, a reactance device included in one of the coils and registering or indicating mechanism actuated by the currents in the coils and so adjusted as to register or indicate a proportionate amount of wattless current.



NO. 716,345.—REGULATOR.

716,355. Method of Regulating Multi-circuit Generators. Henry H. Wait, Chicago, Ill., assignor to the Western Electric Company, Chicago, Ill. Application filed May 5, 1902.

716,356. Regulating Mechanism for Multi-circuit Generators. Henry H. Wait, Chicago, Ill., assignor to the Western Electric Company, Chicago, Ill. Application filed May 5, 1902.

REISSUE.

12,064. Motor-controller. George E. Krause and Arthur L. Bolen, Indianapolis, Ind. Application filed November 24, 1902. Original No. 712,549, dated November 4, 1902.

In the controller combined with a number of electrical resistances forming part of the motor circuit are a pair of terminals for each of the resistances and means for changing bridging connections between the terminals, whereby the resistances may be placed in series or any number of the resistances placed in parallel with the remaining series arranged resistances.

Western Electrician

DAM!

That is what every user of water-power wants and very few have. Most dams leak. "The Gravity Dam" is the name of a 78-page book on Dam construction. It describes all kinds of dams that leak and break and tells why they leak and break. It also describes a dam that will neither leak, break nor wash out.

THIS BOOK SENT FREE OF CHARGE

To every present or prospective user of water-power who sends his address and five cents in stamps to pay postage.

Middle District, Electric Building, Cleveland, Ohio.

What the I. C. S. did for me.

I was employed as erecting engineer when I enrolled for a course of training in electricity in the International Correspondence Schools, of Scranton, Pa. Before I finished the Course, I successfully designed and constructed an $80,000 plant for the Municipal Electric Light, Power, and Water System, of Healdsburg, Cal., and I am now superintendent of the system. My station engineers have enrolled on the strength of my success, and I am satisfied that their efficiency will be rendered greater thereby. The Reference Library furnished with my Course provides an invaluable aid in my work. It is almost impossible to conceive of any greater benefits derived from education than have come to me through my Course in the International Correspondence Schools.

W. W. BARNES, Healdsburg, Cal.

Do you want a better salary and position?

Such evidence as the above is proof conclusive of the value of our training. Actual results are the best argument. We have hundreds of endorsements like the above—just as strong, just as convincing. Isn't this one convincing enough to induce you to cut out, fill in, and send us the attached coupon with X marked before the position for which you wish to be trained?

Do It Anyway.

International Correspondence Schools,
Box 1002, Scranton, Pa.

Please explain how I can qualify for the position marked X below.

	Electrical Engineer		Fire Underwriters' Inspector
	Telephone Engineer		Interior Wireman
	Telegraph Engineer		Foreman Dynamo Room
	Erector of Electric Machinery		Foreman Electrical Repairs
	Manager Electric Railway		Dynamo Tender
	Manager Electric Light Plant		Electrical Lineman
	Supt. Electric Light and Power Plant		Motorman

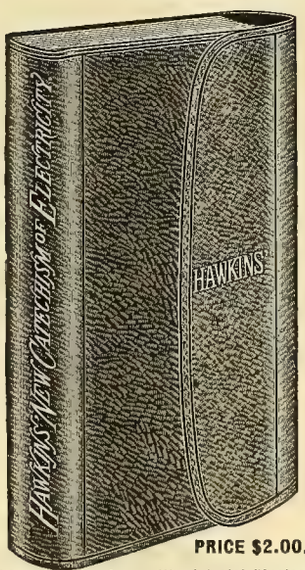
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

NOTICE SOME OF THE GOOD POINTS:

Has coil enclosed in tube of *Norway* iron.
Armature on front end of coil.
No bunglesome armature rod.
Shutter is retained by armature itself.
No shutters to project on face of board when they fall.
Plug cannot be inserted without restoring shutter.
Night bell contact is simple and positive.
Coil leads are German silver clips (no wires exposed).
Contacts are all full metallic.
Shell of jack not used as contact.
Two heavy German silver springs form contact with plug.
Insulation of pure hard rubber.
Each drop and jack self-contained, no unsoldering of wires necessary to remove them from board.

REQUIRES LESS CURRENT THAN ANY DROP MADE.

PRACTICAL FEATURES OF TELEPHONE WORK.

By A. E. DOBBS.

Cloth, 7 by 5 1-4 Inches. Illustrated. 134 pages. Appendix. 75 Cents.

THIS work is designed as a simple, plain-speaking handbook for the practical telephone man. Its author, Mr. Dobbs, has been eminently fitted by fourteen years' experience in telephony to deal with the subject in a thoroughly competent manner. This he has done, and the result is a mine of information, clearly and concisely presented, and invaluable to the manager, operator and lineman alike. The appendix contains reliable data regarding wires, resistance, inductive capacity, etc.

This or any other book on telephony or electricity sent to any address, postpaid, on receipt of price.

ELECTRICIAN PUBLISHING CO.,
510 MARQUETTE BUILDING, CHICAGO.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.

This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 510 pp. 380 illustrations. Price $3.00.

This is the first complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E. Dobbs. 106 pp. Price $1.00.

A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 269 illustrations. Price $1.00.

Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.

In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs. 134 pp. Price 75 cents.

A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo, 48 pp. Price 25 cents.

This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $4.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pp. 23 illustrations. Price $1.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pp. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Work Published, Sent on Receipt of Price.

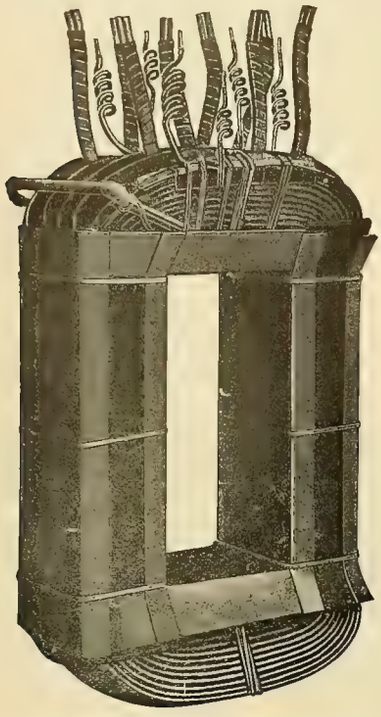
The Westinghouse Type N Transformer

has two primary and three secondary voltages. Each secondary voltage can be varied to suit either the varying line voltages of an extensive transmission system or to give special voltages from standard circuits.

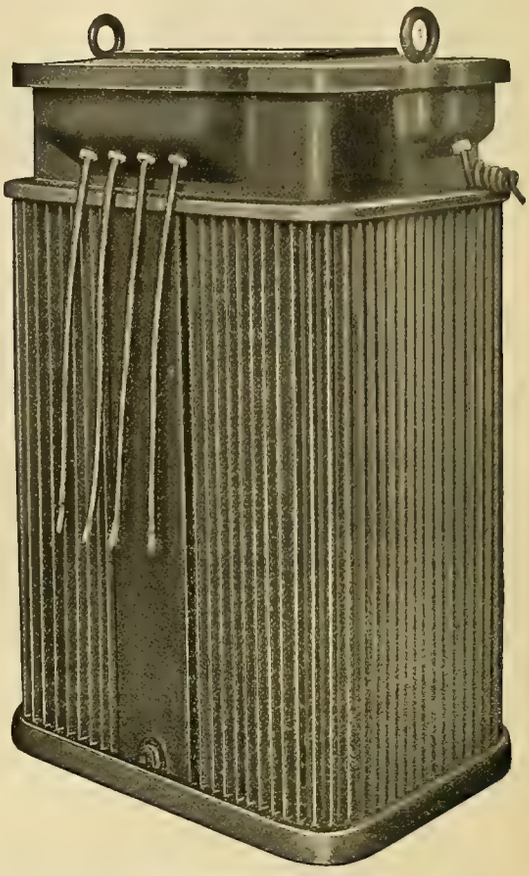


Westinghouse Type N Transformer Coils Assembled, Showing Spread Coil Feature.

All transformers are arranged for three-wire secondary distribution and the secondary coils are cross-connected to give equal voltages on both circuits, even with large, unbalanced loads.

Sizes: 1-2 to 50 K. W.
For frequencies of 7,200-16,000.

Write for circular 1060 to nearest district office of



50 K. W. Type N Transformer.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, In Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

Orders for above book, or any electrical work published promptly sent on receipt of price, postage prepaid.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

"WOOD"

ENCLOSED ARC LAMPS

FOR DIRECT CURRENT CIRCUITS

110 VOLTS MULTIPLE TYPE FORM C	SERIES DIFFERENTIAL TYPE FORM C	220 OR 500 VOLTS MULTIPLE SERIES TYPE FORM C

THE BEST LAMPS ON THE MARKET

FORM C Direct Current "Wood" Arc Lamps possess valuable features of simplicity, durability, reliability and interchangeability that warrant the above assertion. The Series lamp is the shortest lamp made for the same length carbons. The 220 or 500 volt lamp operates either two in series on 200 to 250 volt circuits or five in series on 500 to 550 volt circuits as successfully as the multiple lamp operates on 110-volt circuits, which means that both lamps are included in the above claim. More detailed information will be furnished on application.

OKONITE IT NEVER DISAPPOINTS

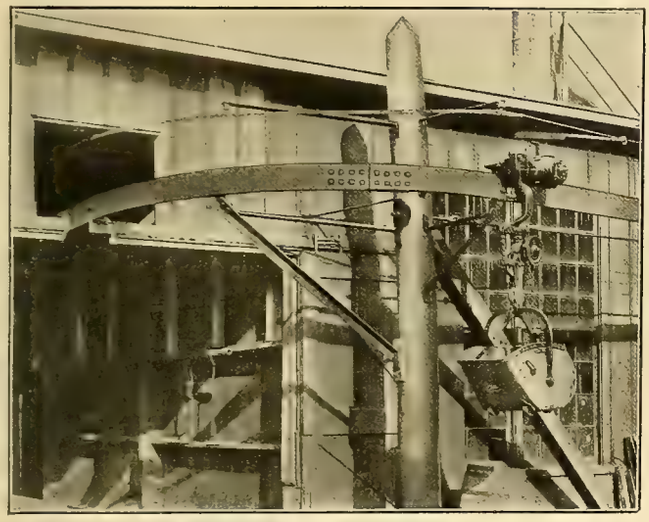
TELPHERAGE.



TELPHER WITH AUTOMATIC DUMPING BUCKET TRAVERSING A CURVE.

This shows a Telpherage plant located at Buffalo, New York. This installation is interesting on account of its automatic features. The bucket is loaded at the cars and the load is transported by electricity to the end of the line, where the bucket automatically dumps its load. The Telpher reverses itself and returns with the empty bucket to the cars for another load. The Telpher can be operated by unskilled labor with the minimum of expense for power, maintenance and first cost. Power less than one horse. The material, which is dumped into a hopper, is then elevated to the upper story. This line consists of a straight section and a right angle curve. A portion is cable, and the curve and the track in the building are solid rail. The line is supported, as will be observed from the photographs, from ordinary telegraph poles, and is an excellent example of simple construction.

SEND FOR CIRCULARS NOS. 20 AND 24.

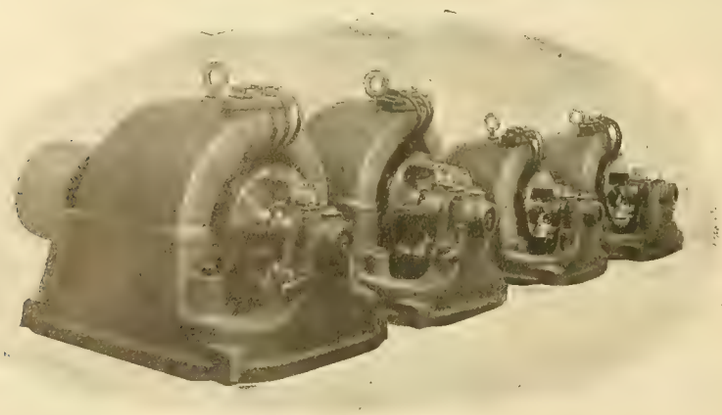
RETAIL PRICE, $2.50. SOLD BY ALL DEALERS.

MADE BY

MANHATTAN ELECTRICAL SUPPLY CO.,

32 Cortlandt Street, NEW YORK.

188 Fifth Avenue, CHICAGO.



WRITE FOR "OPINIONS," Our Pamphlet, on Our SINGLE-PHASE MOTORS.

Also send for new Bulletin, "No. W50," giving all their "FINE POINTS."

Testimonial letters show that where Wagner Company's Single phase Motors **have replaced direct current motors the power service has been better and the cost of operation less.**

For pumping and blower service these motors are especially adapted, most excellent results being secured. We are prepared to bid on direct-geared triplex pump outfits, belted ventilating outfits and belted pressure blower work, within the limit of our motor capacities, and solicit inquiry along these lines, as well as other lines of power work.

"The Recognized Authority on Wiring and Construction."

The universally adopted National Electrical Code explained and illustrated in this year's edition of the hand-book.

STANDARD WIRING
For Electric Light and Power.
By H. C. CUSHING, Jr., A. I. E. E., Electrical Engineer and Inspector.

ADOPTED

By the Fire Underwriters of the United States.
By Cornell University, Stanford University and other Technical Colleges and Schools.
By over 27,000 Electrical Engineers, Central Station Managers and Wiremen.

BECAUSE

It is the only book on Wiring and Construction kept strictly up to date.
It contains all the necessary Tables, Rules, Formulas and Illustrations.
It settles disputes, and if referred to before wiring will prevent disputes.

Flexible Leather Cover (pocket size), $1.00.
Sent post paid upon receipt of price, by

GRAPHITE RESISTANCE.

Graphite resistance in rods, tubes or otherwise. Any resistance wanted—one ohm to one million ohms. Write for particulars.

JOSEPH DIXON CRUCIBLE CO., - JERSEY CITY, N. J.

ELECTRICITY MADE SIMPLE.

233 Pages. 108 Illustrations. By CLARK CARYL HASKINS. Cloth $1.00. Paper .50.

A BOOK DEVOID OF TECHNICALITIES—SIMPLE, PLAIN AND UNDERSTANDABLE.

There are many elementary books about electricity upon the market, but this is the first one presenting the matter in such shape that the layman may understand it, and, at the same time, not written in a childish manner.

This little work is not intended for the instruction of experts, nor as a guide for professors. The author has endeavored to bring the matter down to the level of those whose opportunities for gaining information on the branches treated have been limited.

Four chapters are devoted to Static Electricity; three each to Chemical Batteries and Light and Power; two each to Terrestrial Magnetism and Electro-Magnetism; one each to Atmospheric Electricity; Lightning Rods; Electro-Chemistry; Applied Electro-Magnetism; Force, Work and Energy; Practical Application of Ohm's Law; also a chapter upon Methods of Developing Electricity, other than Chemical.

The large number of examples that are given to illustrate the practical application of elementary principles is gaining for it a reputation as a text-book for schools and colleges.

FOR ENGINEERS, DYNAMO MEN, FIREMEN, LINEMEN, WIREMEN AND LEARNERS.
FOR STUDY OR REFERENCE.

The Electro-Magnet

—BY—

TOWNSEND WOLCOTT, A. E. KENNELLY, RICHARD VARLEY.

PRICE, ONE DOLLAR,

CONTENTS.

General Properties. Magnetic Field of Force. Magnetic Units. Induced Magnet, Reluctance, Permeability. Discovery of Electro-Magnetism. Iron Ring in the Magnetic Field. Calculation of Magnet Windings. Magnetic Circuit. Given Ampere-Turns to Find Proper Current. Relation of Ampere-Turns to Wire Space. Room Occupied by Insulation, Heating and Other Limiting Conditions. Winding a Magnet for a Given Voltage. Hysteresis, Self-Induction. Alternating Currents. Traction.

On the Relative Values of the Windings of Electro-Magnetic Coils. Properties of Fixed Winding Spaces and a Fixed Size of Wire. Properties of Fixed Winding Space and Variable Size of Wire. Fixed Winding Space and Fixed Length of Wire or Number of Turns. Constant Internal Dimensions, but External Diameter of Coil Variable. Fixed Internal Radius and Interflange-Fixed Number of Turns of Same Size of Wire.

The Importance of Details. Actual Calculations. Working Formulæ. Diameter of Wire to Carry Given Current. Diameter of Wire to Have Given Resistance. Thickness of Insulation in a Given Coil. Weight of Copper in a Given Coil. Table of Constants for Insulated Wire. Standard Table of Resistances of Insulated Wires. Table Showing Percentage of Copper and Insulation in Cotton or Silk Covered Wire. Standard Copper Wire Table. 17 Problems (Solved) Illustrated. Cuts of 37 Magnets of Standard Dimensions, Lengths Variable. Logarithms and Anti-Logarithms. Decimal Parts of an Inch. Logarithmic Scale.

GOOD BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00**.

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50**.

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00**.
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$5.00**.
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth, **$1 25**.
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the layman who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

XXXIV.—Automatic Exchanges. XXXV.—Storage Batteries. XXXVI.—Specifications.

518 large octavo pages, 379 Illus. Price, $3.00.

This is the first complete treatise on Telephony in the English language. The author was peculiarly qualified for the task, having been an examiner in the U. S. Patent Office in the telephonic class, and subsequently as a telephone engineer had a wide experience in every branch of telephonic work. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

Copies of this or any other electrical book published sent prepaid, to any address in the world, on receipt of price.

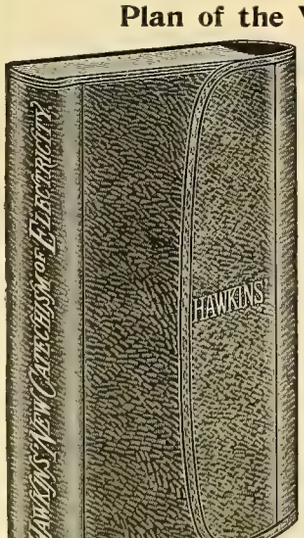
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical impor ance are at once available.

It is an up-to date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

The Best of Everything

THE NORTH-WESTERN LINE

THE through train service of the Chicago & North-Western Railway from Chicago to Omaha, Denver and the Pacific Coast on the west, the Black Hills and Dakotas to the northwest and to Milwaukee, Madison, St. Paul, Minneapolis and Duluth on the north, is as nearly perfect as modern and skillful management can make it.

The Overland Limited, a magnificent electric-lighted train, less than three days Chicago to San Francisco, daily.

The Colorado Special, only two nights to Denver from the Atlantic seaboard. Solid train Chicago to Denver.

The North-Western Limited, an electric lighted daily train between Chicago, St. Paul and Minneapolis.

EDWARDS AND CO.

The R. E.-A. L. Monitor Bell. (Patented.)

Hammer rod supported in two places and thrown straight out and in by the armature, striking gong on inside, near edge, thus giving a full, clear tone.

All springs made of Phosphor Bronze and so formed that there is least possible strain.

Contacts are platinized, adjustment is made by pressure on the standard which supports one contact. No screws or nuts being used in the adjustment, bell does not get out of order by operation.

Ordinarily the weak point is the pivot, the unreliable one the adjusting screw and nut. As these defects have been eliminated, this bell will stand hard usage and operate under adverse conditions.

The hammer entirely concealed by gong and cannot be tampered with.

It is especially adapted for use on street cars, as, in addition to the advantages mentioned, it is dust, insect and moisture proof.

DAM!

That is what every user of water-power wants and very few have. Most dams leak. "The Gravity Dam" is the name of a 78 page book on dam construction. It describes all kinds of dams that leak and break and tells why they leak and break. It also describes a dam that will neither leak, break nor wash out.

THIS BOOK SENT FREE OF CHARGE

To every present or prospective user of water-power who sends his address and five cents in stamps to pay postage.

PRACTICAL FEATURES OF TELEPHONE WORK.

By A. E. DOBBS.

Cloth, 7 by 5 1-4 Inches. Illustrated. 134 pages. Appendix. 75 Cents.

THIS work is designed as a simple, plain-speaking handbook for the practical telephone man. Its author, Mr. Dobbs, has been eminently fitted by fourteen years' experience in telephony to deal with the subject in a thoroughly competent manner. This he has done, and the result is a mine of information, clearly and concisely presented, and invaluable to the manager, operator and lineman alike. The appendix contains reliable data regarding wires, resistance, inductive capacity, etc.

This or any other book on telephony or electricity sent to any address, postpaid, on receipt of price.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.

This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 510 pp. 380 illustrations. Price $3.00.

This is the first complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E Dobbs. 106 pp. Price $1.00.

A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 269 illustrations. Price $1.00.

Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.

In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs. 134 pp. Price 75 cents.

A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo, 48 pp. Price 25 cents.

This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $4.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pp. 23 illustrations. Price $1.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pp. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Work Published, Sent on Receipt of Price.

THE LATEST BOOK.

"ELECTRIC LIGHTING,"

A PRACTICAL EXPOSITION OF THE ART FOR THE USE OF

Engineers, Students and Others Interested in the Installation or Operation of Electrical Plants.

BY FRANCIS B. CROCKER,

Professor of Electrical Engineering, Columbia University, New York.

Price $3, Prepaid. - Practical and Up-to-Date.

Just the Book you want. 450 Pages, over 150 Illustrations. Read the

TABLE OF CONTENTS:

Chapter I, Introduction; Chapter II, History of Electric Lighting; Chapter III, General Units and Measures; Chapter IV, Classification and Selection of Electric Lighting System; Chapter V, The Location and General Arrangement of Electric Lighting Plants; Chapter VI, Buildings for Electric Lighting Plants; Chapter VII, Possible Sources of Electrical Energy; Chapter VIII, The Steam Engine, History and General Principles; Chapter IX, Steam Boilers for Electric Lighting; Chapter X, Steam Engines for Electric Lighting, General Construction; Chapter XI, Typical Forms of Steam Engine for Electric Lighting; Chapter XII, Steam Engines for Electric Lighting, Selection, Installation and Management; Chapter XIII, Gas, Oil and Hot Air Engines; Chapter XIV, Water Wheels and Windmills; Chapter XV, Mechanical Connections between Engines and Dynamos, Direct Coupling, Belting and Shafting; Chapter XVI, Toothed, Friction and Other Gearing; Chapter XVII, Principles, Construction and Management; Chapter XXI, Applications of Accumulators in Electric Lighting; Chapter XXII, Switchboards, Including Switches, Fuses and Circuit-Breakers; Chapter XXIII, Electrical Measuring Instruments; Chapter XXIV, Lightning Arresters.

Every Engineer and Electrician who desires to thoroughly master the Art of Electric Lighting should have a copy of this book. Sent promptly.

ELECTRICIAN PUBLISHING COMPANY, Suite 510 Marquette Building, CHICAGO.

A New Paper-Weight.

Sent on request to any Supply Company officer or P. A. Mailed to any address for ten cents to pay postage and packing.

We have tried to make a good paper-weight as we have always tried to make a good fuse wire.

Illuminated Dial Station Instruments.

These instruments are based upon the same general principle and are just as accurate as our regular Standard Portable Direct Current Voltmeters and Ammeters, but are much larger, and the working parts are inclosed in a neatly designed, dust-proof cast-iron case which effectively shields the instruments from disturbing influences of external magnetic fields.

BERLIN—European Weston Electrical Instrument Co., Ritterstrasse No. 86.

Weston Standard Illuminated Dial Potential Indicator, Style B.

Weston Standard

Portable Direct Reading Voltmeters and Millivoltmeters. Ammeters and Milammeters, Wattmeters and Voltmeters, for Alternating and Direct Current Circuits.

Our portable instruments are recognized as standards throughout the civilized world.

Our Semi-Portable Laboratory Standard Voltmeters and Ammeters are still better.

They are the most reliable, absolute standards for Laboratory use.

The Best of Everything

THE NORTH-WESTERN LINE

THE through train service of the Chicago & North-Western Railway from Chicago to Omaha, Denver and the Pacific Coast on the west, the Black Hills and Dakotas to the northwest and to Milwaukee, Madison, St. Paul, Minneapolis and Duluth on the north, is as nearly perfect as modern and skillful management can make it.

The Overland Limited, a magnificent electric-lighted train, less than three days Chicago to San Francisco, daily.

The Colorado Special, only two nights to Denver from the Atlantic seaboard. Solid train Chicago to Denver.

The North-Western Limited, an electric lighted daily train between Chicago, St. Paul and Minneapolis.

H. R. McCULLOUGH, 3d Vice-President. W. B. KNISKERN, Gen'l Pass'r and Tkt. Agt. CHICAGO, ILL.

NOW READY!!

WESTERN ELECTRICIAN'S MOONLIGHT SCHEDULE

FOR 1902.

ARRANGED IN BOOK FORM, POCKET SIZE.

10 Cents per Copy. Send for It.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., Chicago.

ELECTRICITY MADE SIMPLE.

233 Pages. 108 Illustrations. **By CLARK CARYL HASKINS.** Cloth $1.00. Paper .50.

A BOOK DEVOID OF TECHNICALITIES—SIMPLE, PLAIN AND UNDERSTANDABLE.

There are many elementary books about electricity upon the market, but this is the first one presenting the matter in such shape that the layman may understand it, and, at the same time, not written in a childish manner.

This little work is not intended for the instruction of experts, nor as a guide for professors. The author has endeavored to bring the matter down to the level of those whose opportunities for gaining information on the branches treated have been limited.

Four chapters are devoted to Static Electricity; three each to Chemical Batteries and Light and Power; two each to Terrestrial Magnetism and Electro-Magnetism; one each to Atmospheric Electricity; Lightning Rods; Electro-Chemistry; Applied Electro-Magnetism; Force, Work and Energy; Practical Application of Ohm's Law; also a chapter upon Methods of Developing Electricity, other than Chemical.

The large number of examples that are given to illustrate the practical application of elementary principles is gaining for it a reputation as a text-book for schools and colleges.

FOR ENGINEERS, DYNAMO MEN, FIREMEN, LINEMEN, WIREMEN AND LEARNERS. FOR STUDY OR REFERENCE.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

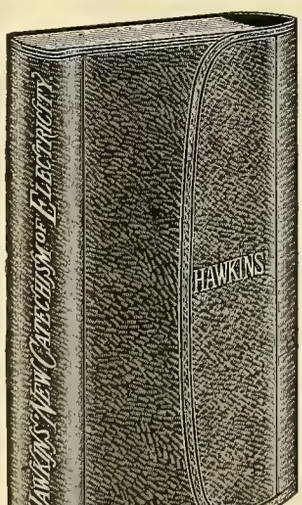
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket: Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X; Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

THE LATEST BOOK.

"ELECTRIC LIGHTING,"

A PRACTICAL EXPOSITION OF THE ART FOR THE USE OF

Engineers, Students and Others Interested in the Installation or Operation of Electrical Plants.

BY FRANCIS B. CROCKER,

Professor of Electrical Engineering, Columbia University, New York.

Price $3, Prepaid. - Practical and Up-to-Date.

Just the Book you want. 450 Pages, over 150 Illustrations. Read the

TABLE OF CONTENTS:

Chapter I, Introduction; Chapter II, History of Electric Lighting; Chapter III, General Units and Measures; Chapter IV, Classification and Selection of Electric Lighting System; Chapter V, The Location and General Arrangement of Electric Lighting Plants; Chapter VI, Buildings for Electric Lighting Plants; Chapter VII, Possible Sources of Electrical Energy; Chapter VIII, The Steam Engine, History and General Principles; Chapter IX, Steam Boilers for Electric Lighting; Chapter X, Steam Engines for Electric Lighting, General Construction; Chapter XI, Typical Forms of Steam Engine for Electric Lighting; Chapter XII, Steam Engines for Electric Lighting, Selection, Installation and Management; Chapter XIII, Gas, Oil and Hot Air Engines; Chapter XIV, Water Wheels and Windmills; Chapter XV, Mechanical Connections between Engines and Dynamos, Direct Coupling, Belting and Shafting; Chapter XVI, Toothed, Friction and Other Gearing; Chapter XVII, Principles, Construction and Management; Chapter XXI, Applications of Accumulators in Electric Lighting; Chapter XXII, Switchboards, Including Switches, Fuses and Circuit-Breakers; Chapter XXIII, Electrical Measuring Instruments; Chapter XXIV, Lightning Arresters.

Every Engineer and Electrician who desires to thoroughly master the Art of Electric Lighting should have a copy of this book. Sent promptly.

We control patents and are sole makers of the

Caldwell Liquid Interrupter.

Cunningham Mercury Jet Interrupter.

Caldwell Stereoscopic Fluoroscope.

ELMER G. WILLYOUNG, 97-99 Frankfort St., NEW YORK, N. Y.

Send for Catalogue No. 507 10c in stamps.

What the I. C. S. did for me

I owe much of my success to the I. C. S. The results obtained through my I. C. S. training were practical. I was a conductor when I first enrolled in the Schools, and, in eight months' time my employers made me Assistant Electrician with an increase in wages. A few months brought another advance in wages, and I was soon given my present position as Chief Electrician with another advance.

J. H. SWEETMAN,
76 Northumberland St., Guelph, Ont.

DO YOU WANT A BETTER SALARY AND POSITION?

Such evidence as the above is proof conclusive of the value of our training. Actual results is the best argument. We have hundreds of endorsements like the above—just as strong, just as convincing. Isn't this one convincing enough to induce you to cut out, fill in, and send us the attached coupon with X marked before the position for which you wish to be trained?

DO IT ANYWAY.

International Correspondence Schools,
Box 1002, Scranton, Pa.

Please explain how I can qualify for the position marked X below.

Electrical Engineer	Fire Underwriters' Inspector
Telephone Engineer	Interior Wireman
Telegraph Engineer	Foreman Dynamo Room
Erector of Electric Machinery	Foreman Electrical Repairs
Manager Electric Railway	Dynamo Tender
Manager Electric Light Plant	Electrical Lineman
Supt. Electric Light and Power Plant	Motorman

DAM!

That is what every user of water-power wants and very few have. Most dams leak. "The Gravity Dam" is the name of a 78-page book on Dam construction. It describes all kinds of dams that leak and break and tells why they leak and break. It also describes a dam that will neither leak, break nor wash out.

THIS BOOK SENT FREE OF CHARGE

To every present or prospective user of water-power who sends his address and five cents in stamps to pay postage.

GOOD BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**

The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$5.00.**

The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth, **$1.25.**

A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft.* 1 volume, 12mo, cloth, **50** cents. Fully illustrated.

This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft.* 1 volume, 12mo, illustrated, cloth, **50** cents.

The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.

The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft.* 1 volume, 12mo, cloth and gold, **75** cents.

The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

PRACTICAL FEATURES OF TELEPHONE WORK.

By A. E. DOBBS.

Cloth, 7 by 5 1-4 Inches. Illustrated. 134 pages. Appendix. 75 Cents.

THIS work is designed as a simple, plain-speaking handbook for the practical telephone man. Its author, Mr. Dobbs, has been eminently fitted by fourteen years' experience in telephony to deal with the subject in a thoroughly competent manner. This he has done, and the result is a mine of information, clearly and concisely presented, and invaluable to the manager, operator and lineman alike. The appendix contains reliable data regarding wires, resistance, inductive capacity, etc.

This or any other book on telephony or electricity sent to any address, postpaid, on receipt of price.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.
This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 510 pp. 380 illustrations. Price $3.00.
This is the first complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E. Dobbs. 106 pp. Price $1.00.
A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 269 illustrations. Price $1.00.
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs. 134 pp. Price 75 cents.
A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo, 48 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $4.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pp. 23 illustrations. Price $1.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pp. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Work Published, Sent on Receipt of Price.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X; Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

Orders for above book, or any electrical work published promptly sent on receipt of price, postage prepaid.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

FORT WAYNE ELECTRIC WORKS

(INCORPORATED)

Type K Wattmeters

Are direct reading and will register accurately the energy of alternating-current circuits regardless of power factor. They are permanent in calibration and are easily adapted to either 60 or 133 cycle circuits.

Form SAC

Is the switchboard wattmeter, enclosed in a strong brass-bound dust-proof glass case. It is back-connected and is secured to the board from the back. Finishes—polished brass, nickel or oxidized brass.

TYPE K, FORM SAC

INTEGRATING WATTMETER FOR SWITCHBOARD USE.

TRIUMPH

SMALL GENERATING SETS FOR MARINE WORK OR SMALL ISOLATED PLANTS.

WE MANUFACTURE
GENERATORS AND MOTORS
OF ALL KINDS AND FOR ALL PURPOSES.

TRIUMPH ELECTRIC CO.,
SEND FOR BULLETIN "W E" CINCINNATI, O.

Don't Overlook a Good Thing.

I have something entirely new in motors. New principle, one-quarter to five horsepower. Direct and alternating current, any speed, any voltage, any frequency.

Half the Weight, Increased Efficiency,
Increased Durability, Perfect Ventilation,
Cost Less than any other Motor.

You had better drop me a line, and I will explain in detail, send cuts, etc.

HENRY A. COIT, Laclede Bldg., St. Louis.

P. S.—Also something Startling and New in Electrical Specialties. Let me tell you about them.

NOW

FIBRE-GRAPHITE COMMUTATOR BRUSH
SELF-LUBRICATING NOISELESS

There's No Friction
with the Fibre-Graphite Commutator Brush. Being 90 per cent. pure graphite, it insures low resistance, no sparking under a varying load, and longer wear. There is no greasing required. The Fibre-Graphite is therefore the most economic brush on the market. Send for price list.

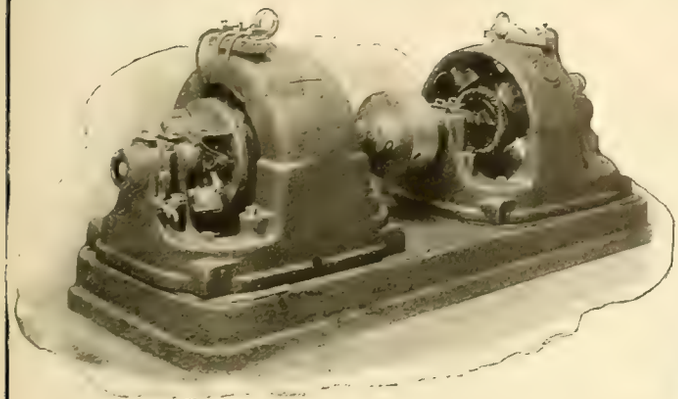
GENERAL OFFICES: SCHENECTADY, N. Y.

AUTOMOBILE CHARGING OUTFIT



(4½-Kilowatts Capacity)

COMBINATION OF AN A. C. INDUCTION MOTOR AND A WAGNER D. C. GENERATOR.

The Alternate Current Motors are built to operate on 104-volt and 208-volt single-phase circuits with either 60 or 133 cycles, but can be operated also on two-phase or on three-phase circuits.

Motors can be wound for any voltage up to 500 and for any frequency desired.

It is important with these motors to specify accurately the frequency of the circuit when ordering, especially if considerable starting torque is required.

These are not synchronous motors, and **do not produce any appreciable variation or fluctuation in the voltage of the circuit upon which they are operated. They can be connected to the same mains as incandescent lamps, without affecting the latter.**

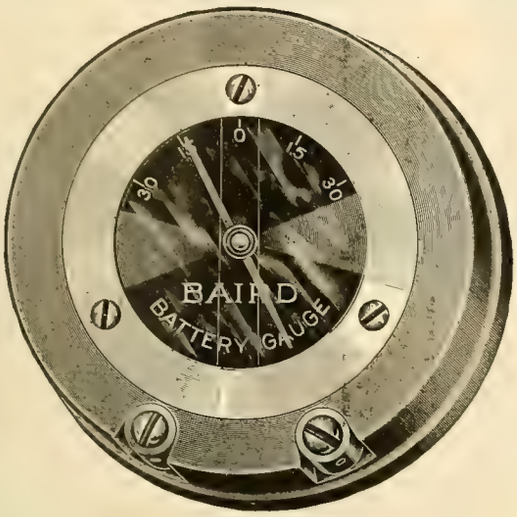
THE BAIRD

$1.50 Battery Gauge.



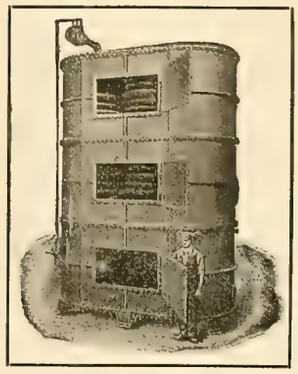
Above cut is full size. Weight, 4 oz.

CONVENIENT in size and shape and light weight to carry in pocket.
LONG INDICATOR NEEDLE giving large scale divisions.
SIMPLE AND DURABLE construction, involving only one moving part.
JEWELED in the most approved manner, giving a sensitive needle, equal to the best astatic galvanometers.
DAMPENED by a thick disc of pure copper, greatly reducing the oscillations of the needle.
BINDING POSTS are provided for the attachment of a cord with ordinary telephone tips, or a wire of No. 16 gauge or smaller.
SCALE is simple in the extreme, as only two points are marked upon it, viz.: the point to which the needle will be deflected by a single cell of dry battery in good condition, and the point to which the needle will be deflected by one cell of dry battery which may be considered as no longer fit for use.
DOUBLE SCALE, making it immaterial which poles of the battery be connected to the battery gauge, as the needle may be read with a deflection either way.
NEEDLE LOCK prevents injury to moving parts when the gauge is carried in the pocket.
SATISFACTION GUARANTEED or money refunded.

Price, $1.50. Subject to discount for quantities.

BAIRD MANUFACTURING CO.,
187 Ontario Street, CHICAGO.

When You Save Steam,



You Economize in Fuel, and

ECONOMY OF FUEL means an increased bank account. This result is secured by

Stilwell's Feed-Water Heater.

It uses EXHAUST STEAM and delivers PURE HOT WATER TO YOUR BOILERS.

We also make STEAM POWER and ELECTRIC PUMPING MACHINERY for all purposes, including

Water Works Pumps,

Jet and Surface CONDENSERS, AIR COMPRESSORS,

Cottonseed and Linseed Oil Machinery, Filter Presses and Victor Turbines.

PRACTICAL FEATURES OF TELEPHONE WORK.

By A. E. DOBBS.

Cloth, 7 by 5 1-4 Inches. Illustrated. 134 pages. Appendix. 75 Cents.

THIS work is designed as a simple, plain-speaking handbook for the practical telephone man. Its author, Mr. Dobbs, has been eminently fitted by fourteen years' experience in telephony to deal with the subject in a thoroughly competent manner. This he has done, and the result is a mine of information, clearly and concisely presented, and invaluable to the manager, operator and lineman alike. The appendix contains reliable data regarding wires, resistance, inductive capacity, etc.

This or any other book on telephony or electricity sent to any address, postpaid, on receipt of price.

ELECTRICIAN PUBLISHING CO.,
510 MARQUETTE BUILDING, CHICAGO.

THE TELEPHONE HAND-BOOK

NEW AND REVISED EDITION, WITH A NEW CHAPTER ON "RECENT PROGRESS," BRINGING THE BOOK UP TO DATE.

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

160 Pages, 133 Illustrations, Cloth, Hand-Book Size, Price $1.00.

Extract from Preface.—"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.

CHAPTER 13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.

CHAPTER 28. Metallic Circuit.
29. Underground Wires.

ELECTRICITY MADE SIMPLE.

233 Pages. 108 Illustrations. **By CLARK CARYL HASKINS.** Cloth $1.00. Paper .50.

A BOOK DEVOID OF TECHNICALITIES—SIMPLE, PLAIN AND UNDERSTANDABLE.

There are many elementary books about electricity upon the market, but this is the first one presenting the matter in such shape that the layman may understand it, and, at the same time, not written in a childish manner.

This little work is not intended for the instruction of experts, nor as a guide for professors. The author has endeavored to bring the matter down to the level of those whose opportunities for gaining information on the branches treated have been limited.

Four chapters are devoted to Static Electricity; three each to Chemical Batteries and Light and Power; two each to Terrestrial Magnetism and Electro-Magnetism; one each to Atmospheric Electricity; Lightning Rods; Electro-Chemistry; Applied Electro-Magnetism; Force, Work and Energy; Practical Application of Ohm's Law; also a chapter upon Methods of Developing Electricity, other than Chemical.

The large number of examples that are given to illustrate the practical application of elementary principles is gaining for it a reputation as a text book for schools and colleges.

FOR ENGINEERS, DYNAMO MEN, FIREMEN, LINEMEN, WIREMEN AND LEARNERS. FOR STUDY OR REFERENCE.

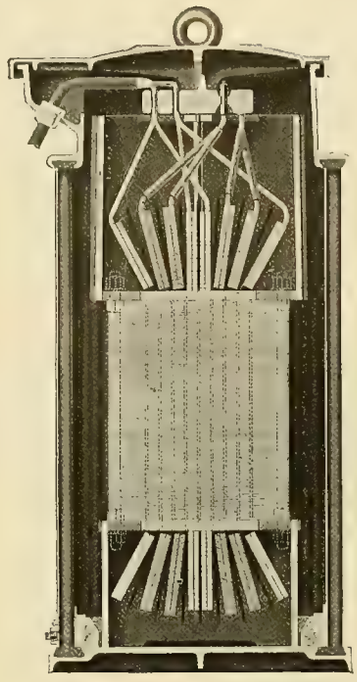
A FEW FACTS ABOUT TRANSFORMERS



Low Running Temperature

A transformer with high running temperature is apt to burn out at any time, especially under overload. It cannot last. Its insulation soon becomes dry and brittle, breaks down and the transformer life ends. While the insulation is deteriorating, the iron is also aging, and core losses, like an increasing interest charge, eat into the profits of the company. This is particularly true in lighting service.

Of the features contributing to low running temperature, the most potent is the spread coil, a feature characteristic of the Westinghouse transformer. The illustration shows a Westinghouse transformer with its spread coils and gives also an idea of other elements which promote cool running; the large mass of exposed iron, the bath of oil, and the corrugated case. All these are common to both the

O. D. Transformer

and the

Type N Transformer

Manufactured by the

Westinghouse Electric & Mfg. Co.

Pittsburg, Pa.

For Transformer Booklets, Address Nearest Sales Office.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated. Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

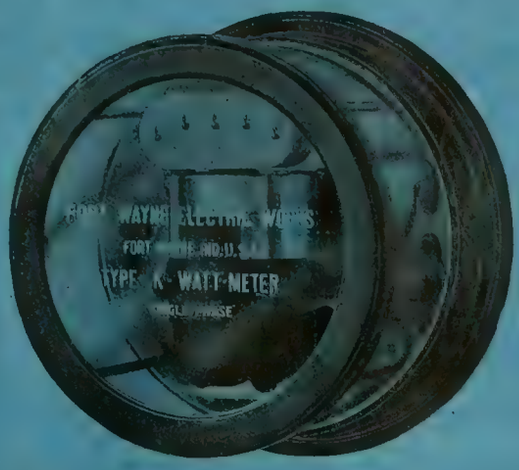
FORT WAYNE ELECTRIC WORKS

(INCORPORATED)

Type K Wattmeters

Are direct reading and will register accurately the energy of alternating-current circuits regardless of power factor. They are permanent in calibration and are easily adapted to either 60 or 133 cycle circuits.



Form SAC

Is the switchboard wattmeter, enclosed in a strong brass-bound dust-proof glass case. It is back-connected and is secured to the board from the back. Finishes—polished brass, nickel or oxidized brass.

TYPE K, FORM SAC

INTEGRATING WATTMETER FOR SWITCHBOARD USE.

WESTON Electrical Instrument Co.,

Waverly Park, NEWARK, N. J.

Weston "Round Pattern" Voltmeter. Type F.

We desire to call attention to a line of cheap but excellent Switchboard Instruments for Direct Current Circuits, which we designate as

"Round Pattern," Type F.

These Instruments are particularly suitable for Isolated Plants and Feeder Circuits in Railway and Power Plants. Voltmeters in ranges from 3 to 750 volts. Ammeters in ranges from 1 to 2,500 amp. All Weston Instruments are unsurpassed in excellence of workmanship, in accuracy and economy of operation.

Mention the WESTERN ELECTRICIAN when writing for catalogues.

Bug-Proof Bell. Segerdahl Patent.

Sample, 3-in. Nickel, 50c. Enameled, 45c.

By mail, prepaid. Made in sizes 2 to 8-inch. Dealers send for prices. We also make Inventors' Models and Special Electrical Devices. Write us for prices.

SPIES ELECTRIC CO., 87-89 W. Van Buren Street, Chicago, Ill.

ELECTRICAL ENGINEERING TAUGHT BY MAIL.

Write for our free Illustrated Book, "Can I Become an Electrical Engineer."

We teach Electrical Engineering, Electric Lighting, Electric Railways, Mechanical Engineering, Mechanical Drawing, etc. at your home, by mail. Institute indorsed by Thos. A. Edison.

Electrical Engineer Institute, Dept. K. 240-242 W. 23d St., New York.

ESTABLISHED 1870.

COMBINATION OF

Stow Flexible Shaft

AND

MULTI-SPEED MOTOR.

Practically dust and water proof. For Portable Drilling, Tapping, Reaming, Emery Grinding, etc. Write for Catalogue and Prices.

STOW MFG. CO., Binghamton, N. Y.

Gen'l European Agents, Selig, Sonnenthal & Co., 85 Queen Victoria Street, London, England.

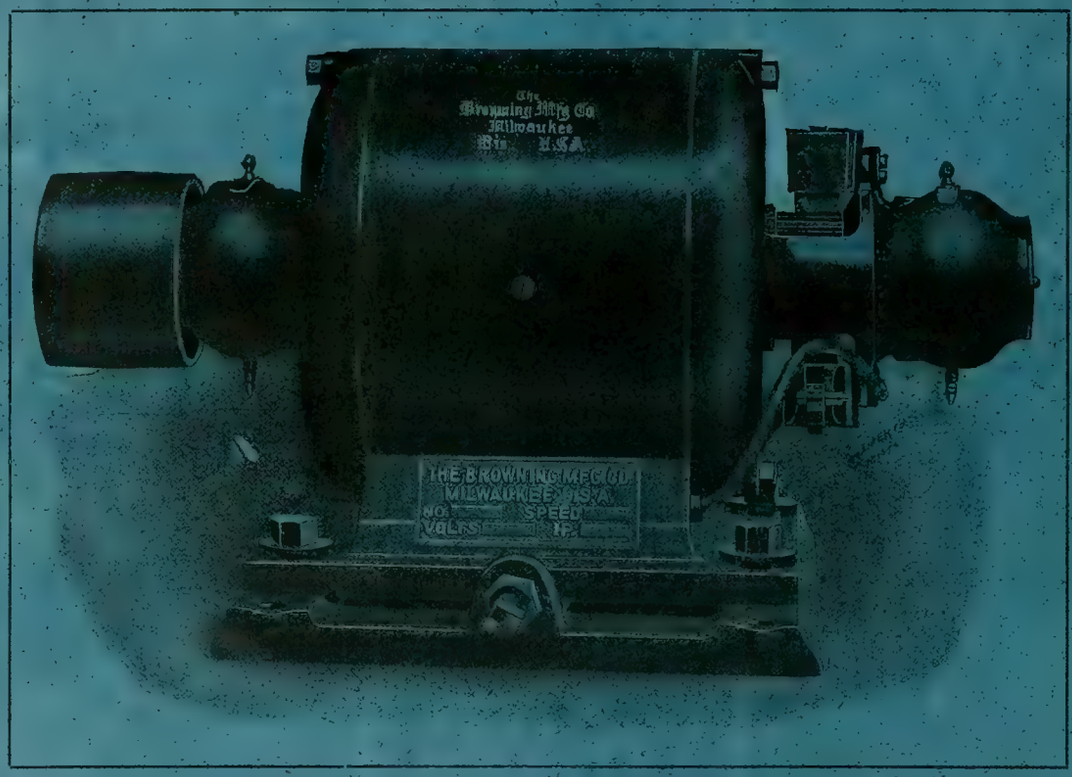
"WESCO." "WESCO."

Browning Small Generators and Motors

FOR

Direct Current Lighting and Power

We carry a very complete line in stock, and can ship promptly.



Made in sizes. Motors 1/40 to 10 H. P. Generators 1/4 to 8 1/2 K. W.

Made of the very best material, and all parts interchangeable. We guarantee this apparatus to be electrically and mechanically perfect.

DAM!

That is what every user of water-power wants and very few have. Most dams leak. "The Gravity Dam" is the name of a 78-page book on dam construction. It describes all kinds of dams that leak and break and tells why they leak and break. It also describes a dam that will neither leak, break nor wash out.

THIS BOOK SENT FREE OF CHARGE

To every present or prospective user of water-power who sends his address and five cents in stamps to pay postage.

It is a fact that a 5-inch

STOMBAUGH GUY ANCHOR

will hold 3,000 lbs.

More than the breaking strain of a ⅜-inch galvanized strand when 4 ft. in ground.

It has been demonstrated that the average time required to install an anchor of this size is 5 minutes.

The cost is 69c. net when plain, and 83c. net when galvanized.

Look over your present methods of guying and see whether the first cost, labor of installation and simplicity compare with the

STOMBAUGH GUY ANCHORS

Worm's-Eye View.

Stop! Look! Listen!

There is danger in reckless driving. There is also danger in **reckless management.** You had better stop right now before it is too late. You had better look into the details of your business more closely and **find where the leakage is.**

Do you want to increase your electrical business?
Do you want to increase your receipts?
Do you want to furnish large blocks, which now have their own engines and dynamos, with heat, light and power?
If so, install our system of underground mains at once and sell your exhaust steam for enough to pay all running expenses and interest in the investment for steam mains.

We guarantee results.

THE TELEPHONE HAND-BOOK

NEW AND REVISED EDITION, WITH A NEW CHAPTER ON "RECENT PROGRESS," BRINGING THE BOOK UP TO DATE.

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

160 Pages, 133 Illustrations, Cloth, Hand-Book Size, Price $1.00.

Extract from Preface.—"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

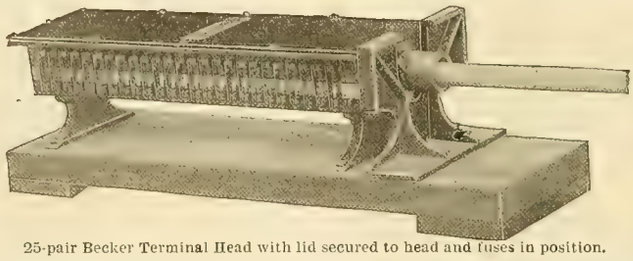
No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
42. Simultaneous Telegraphy and Telephony.
42. Recent Progress. Appendix.

Published and for sale by ELECTRICIAN PUBLISHING CO., 510 Marquette Building, Chicago

PROTECTION
THE BECKER TERMINAL HEAD.



25-pair Becker Terminal Head with lid secured to head and fuses in position.

A practical, absolute protection against lightning, sneak currents or high potential currents from any source. No expense has been spared to make this Terminal Head the best on the market. We can supply anything in the telephone line. Prices reasonable.

The Electro-Magnet

—BY—

TOWNSEND WOLCOTT, A. E. KENNELLY, RICHARD VARLEY.

PRICE, ONE DOLLAR,

CONTENTS.

General Properties. Magnetic Field of Force. Magnetic Units. Induced Magnet, Reluctance, Permeability. Discovery of Electro-Magnetism. Iron Ring in the Magnetic Field. Calculation of Magnet Windings. Magnetic Circuit. Given Ampere-Turns to Find Proper Current. Relation of Ampere-Turns to Wire Space. Room Occupied by Insulation, Heating and Other Limiting Conditions. Winding a Magnet for a Given Voltage. Hysteresis, Self-Induction. Alternating Currents. Traction.

On the Relative Values of the Windings of Electro-Magnetic Coils. Properties of Fixed Winding Spaces and a Fixed Size of Wire. Properties of Fixed Winding Space and Variable Size of Wire. Fixed Winding Space and Fixed Length of Wire or Number of Turns. Constant Internal Dimensions, but External Diameter of Coil Variable. Fixed Internal Radius and Interflange-Fixed Number of Turns of Same Size of Wire.

The Importance of Details. Actual Calculations. Working Formulæ. Diameter of Wire to Carry Given Current. Diameter of Wire to Have Given Resistance. Thickness of Insulation in a Given Coil. Weight of Copper in a Given Coil. Table of Constants for Insulated Wire. Standard Table of Resistances of Insulated Wires. Table Showing Percentage of Copper and Insulation in Cotton or Silk Covered Wire. Standard Copper Wire Table, 17 Problems (Solved) Illustrated. Cuts of 37 Magnets of Standard Dimensions, Lengths Variable. Logarithms and Anti-Logarithms. Decimal Parts of an Inch. Logarithmic Scale.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.
This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 510 pp. 380 illustrations. Price $3.00.
This is the first complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E. Dobbs. 106 pp. Price $1.00.
A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 263 illustrations. Price $1.00.
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs. 134 pp. Price 75 cents.
A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo, 48 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $4.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pp. 23 illustrations. Price $1.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pp. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Work Published, Sent on Receipt of Price.

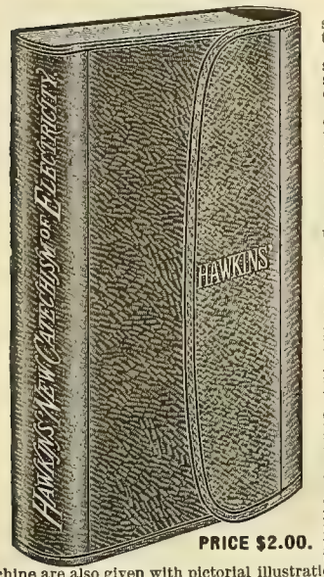
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated. Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

Orders for above book, or any electrical work published promptly sent on receipt of price, postage prepaid.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

Monroeville, Ind., July 14, 1902.

Fort Wayne Electric Works,

Fort Wayne, Indiana.

Gentlemen:-

During the severe electrical storm at this place, lightning struck the line and entered one of your 30-light type "A" oil transformers, No. 40048. The discharge blew the fuse and burst the cast iron cover. I did not think it possible for a transformer to be good for anything after this severe discharge, but on having same tested out carefully I find that the coils are not injured in the least.

I cannot too highly recommend your type "A" Oil Transformers to central station men.

Very truly yours,

H. M. Davis

Supt. Electric Light Plant.

STRUCK BY LIGHTNING.

NOW READY!

WESTERN ELECTRICIAN'S

MOONLIGHT SCHEDULE

FOR 1902.

TEN CENTS A COPY.

Electrician Publishing Co.,

510 MARQUETTE BUILDING,

CHICAGO.

A New Paper-Weight.

Sent on request to any Supply Company officer or P. A. Mailed to any address for ten cents to pay postage and packing.

We have tried to make a good paper-weight as we have always tried to make a good fuse wire.

A MOST IMPORTANT POINT ON

"TYPE F" SWITCHBOARD INSTRUMENTS

Type F Voltmeter, Back Connection, One-Third Actual Size.

The pointers of many so-called dead beat instruments will oscillate back and forth, after a change of circuit conditions, for a minute or more before coming to rest. In type H, K and F instruments the pointers swing from their position of rest to a new position of rest when the current changes *without any intermediate oscillation.*

This quality has been obtained without sacrificing in the least the accuracy or the sensibility of the instrument.

OTHER VALUABLE FEATURES EXPLAINED IN DETAIL IN BULLETIN NO. 31, 2D EDITION.

WAGNER ELECTRIC MFG. CO., - - ST. LOUIS, MO.

The Best of Everything

THE NORTH-WESTERN LINE

THE through train service of the Chicago & North-Western Railway from Chicago to Omaha, Denver and the Pacific Coast on the west, the Black Hills and Dakotas to the northwest and to Milwaukee, Madison, St. Paul, Minneapolis and Duluth on the north, is as nearly perfect as modern and skillful management can make it.

The Overland Limited, a magnificent electric-lighted train, less than three days Chicago to San Francisco, daily.

The Colorado Special, only two nights to Denver from the Atlantic seaboard. Solid train Chicago to Denver.

The North-Western Limited, an electric lighted daily train between Chicago, St. Paul and Minneapolis.

H. R. McCULLOUGH, 3d Vice-President. W. B. KNISKERN, Gen'l Pass'r and Tkt. Agt.
CHICAGO, ILL.

A BOOK ABOUT CALIFORNIA.

It Is Easy and Inexpensive to Go There Now That the Railroads Have Reduced Their Ticket Fares.

During the winter months, while those in most parts of the country are suffering from extreme cold and disagreeable weather, California, the land of sunshine, is radiant with fruits and flowers and everything that is green and beautiful.

Formerly a trip to California was an expensive luxury, but now that the railroads have very greatly reduced the price of tickets, and particularly since we have introduced the "Personally Conducted Excursion" idea, you can go to California in a comfortable through car by the choicest route and for a very moderate sum.

Is it worth while to fight through the winter at home when you can so easily go where the perfect climate will keep you strong and vigorous? The saving in doctor's bills likely will pay for a California trip. Send six cents in postage for our handsome little book about California. It is intensely interesting and is beautifully illustrated. Address P. S. Eustis, Passenger Traffic Manager, Chicago, Burlington & Quincy Ry. Co., Chicago.

GOOD BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$5.00.**
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth. **$1 25.**
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

Sent Prepaid on Receipt of Price.

Worm's-Eye View.

Stop! Look! Listen!

There is danger in reckless driving. There is also danger in **reckless management.** You had better stop right now before it is too late. You had better look into the details of your business more closely and **find where the leakage is.**

Do you want to increase your electrical business?
Do you want to increase your receipts?
Do you want to furnish large blocks, which now have their own engines and dynamos, with heat, light and power?
If so, install our system of underground mains at once and sell your exhaust steam for enough to pay all running expenses and interest in the investment for steam mains.
We guarantee results.

PRACTICAL FEATURES OF TELEPHONE WORK.

By A. E. DOBBS.

Cloth, 7 by 5 1-4 Inches. Illustrated. 134 pages. Appendix. 75 Cents.

THIS work is designed as a simple, plain-speaking handbook for the practical telephone man. Its author, Mr. Dobbs, has been eminently fitted by fourteen years' experience in telephony to deal with the subject in a thoroughly competent manner. This he has done, and the result is a mine of information, clearly and concisely presented, and invaluable to the manager, operator and lineman alike. The appendix contains reliable data regarding wires, resistance, inductive capacity, etc.

This or any other book on telephony or electricity sent to any address, postpaid, on receipt of price.

XXVIII.—Harmonic Systems of Selective Signaling. XXIX.—Wire for Telephone Use. XXX.—Pole Line Construction. XXXI.—Overhead Cable Construction. XXXII.—Underground Cable Construction. XXXIII.—Testing. XXXIV.—Automatic Exchanges. XXXV.—Storage Batteries. XXXVI.—Specifications.

518 large octavo pages, 379 Illus. Price, $3.00.

This is the first complete treatise on Telephony in the English language. The author was peculiarly qualified for the task, having been an examiner in the U. S. Patent Office in the telephonic class, and subsequently as a telephone engineer had a wide experience in every branch of telephonic work. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

Copies of this or any other electrical book published sent prepaid, to any address in the world, on receipt of price.

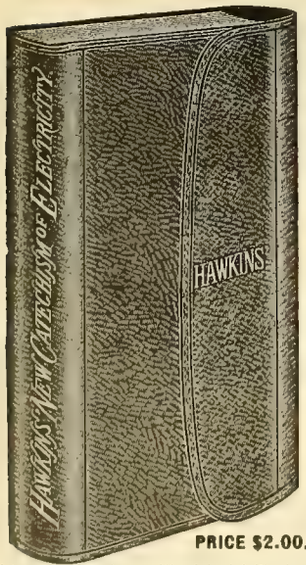
226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.
This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 10,000 of the new.
Electrician Publishing Co.,
510 Marquette Building, CHICAGO.

HAWKINS' NEW CATECHISM OF ELECTRICITY.
Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.
The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.
It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.
It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.
The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.
The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.
Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.
The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.
The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.
The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.
In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICITY MADE SIMPLE.
233 Pages. 108 Illustrations. By CLARK CARYL HASKINS. Cloth $1.00. Paper .50.
A BOOK DEVOID OF TECHNICALITIES—SIMPLE, PLAIN AND UNDERSTANDABLE.
There are many elementary books about electricity upon the market, but this is the first one presenting the matter in such shape that the layman may understand it, and, at the same time, not written in a childish manner.
This little work is not intended for the instruction of experts, nor as a guide for professors. The author has endeavored to bring the matter down to the level of those whose opportunities for gaining information on the branches treated have been limited.
Four chapters are devoted to Static Electricity; three each to Chemical Batteries and Light and Power; two each to Terrestrial Magnetism and Electro-Magnetism; one each to Atmospheric Electricity; Lightning Rods; Electro-Chemistry; Applied Electro-Magnetism; Force, Work and Energy; Practical Application of Ohm's Law; also a chapter upon Methods of Developing Electricity, other than Chemical.
The large number of examples that are given to illustrate the practical application of elementary principles is gaining for it a reputation as a text book for schools and colleges.
FOR ENGINEERS, DYNAMO MEN, FIREMEN, LINEMEN, WIREMEN AND LEARNERS.
FOR STUDY OR REFERENCE.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket: Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

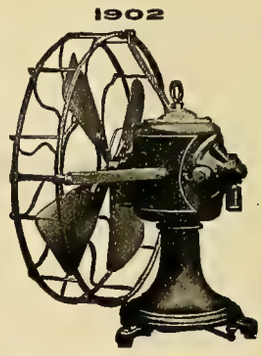
NOISELESS **FAN MOTORS** COMPACT

ALL STYLES AND SIZES EASY RUNNING RIGID CONSTRUCTION

—CALL AND SEE THEM OR WRITE FOR PRICES—

CHICAGO EDISON COMPANY, 139 ADAMS ST., CHICAGO.



PARAGON DESK FAN

DAM!

That is what every user of water-power wants and very few have. Most dams leak. "The Gravity Dam" is the name of a 78-page book on Dam construction. It describes all kinds of dams that leak and break and tells why they leak and break. It also describes a dam that will neither leak, break nor wash out.

THIS BOOK SENT FREE OF CHARGE

To every present or prospective user of water-power who sends his address and five cents in stamps to pay postage.

BEARDSLEY GRAVITY DAM & CONSTRUCTION CO.

Dam Builders and Hydraulic Engineers, Etc. ILKHART, INDIANA.

EDWARDS AND CO.

The R. E.-A. L. Monitor Bell.
(Patented.)

Hammer rod supported in two places and thrown straight out and in by the armature, striking gong on inside, near edge, thus giving a full, clear tone.

All springs made of Phosphor Bronze and so formed that there is least possible strain.

Contacts are platinized, adjustment is made by pressure on the standard which supports one contact. No screws or nuts being used in the adjustment, bell does not get out of order by operation.

Ordinarily the weak point is the pivot, the unreliable one the adjusting screw and nut. As these defects have been eliminated, this bell will stand hard usage and operate under adverse conditions.

The hammer entirely concealed by gong and cannot be tampered with.

It is especially adapted for use on street cars, as, in addition to the advantages mentioned, it is dust, insect and moisture proof.

NEW YORK N.Y

The Best of Everything

THE NORTH-WESTERN LINE

THE through train service of the Chicago & North-Western Railway from Chicago to Omaha, Denver and the Pacific Coast on the west, the Black Hills and Dakotas to the northwest and to Milwaukee, Madison, St. Paul, Minneapolis and Duluth on the north, is as nearly perfect as modern and skillful management can make it.

The Overland Limited, a magnificent electric-lighted train, less than three days Chicago to San Francisco, daily.

The Colorado Special, only two nights to Denver from the Atlantic seaboard. Solid train Chicago to Denver.

The North-Western Limited, an electric lighted daily train between Chicago, St. Paul and Minneapolis.

H. R. McCULLOUGH, 3d Vice-President. W. B. KNISKERN, Gen'l Pass'r and Tkt. Agt.
CHICAGO, ILL.

NOTICE.

TO THOSE INTERESTED IN ELECTRIC LIGHTING.

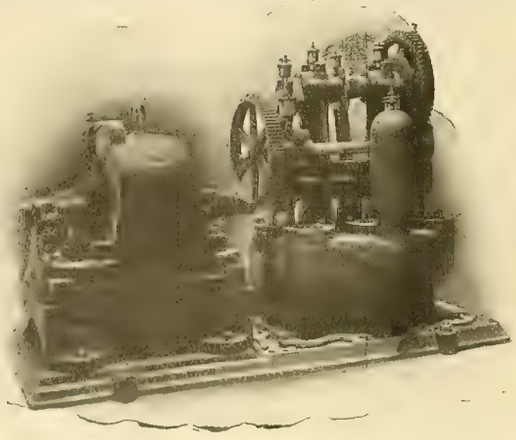
If you haven't read Buckley's "ELECTRIC LIGHTING PLANTS; THEIR COST AND OPERATION," you should order a copy at once. It is the only work of its kind in print and will prove an inseparable companion. It is just the book thousands of men have been waiting for; it will be what you want. 275 pages. Illustrated. Cloth, $2.00. Paper, $1.00. Postage free.

ELECTRICIAN PUBLISHING COMPANY,

Suite 510 Marquette Bldg., Chicago.

Boston and Return
$19.00
VIA THE WABASH.

On account of the meeting of the Brotherhood of St. Andrew, the Wabash road will sell excursion tickets from Chicago to Boston, October 7 to 11, at one fare ($19) for the round trip. By deposit and payment of 50 cents the limit may be extended to November 12. Write for maps and time-tables. F. A PALMER, A. G. P. A., 97 Adams Street, Chicago, Ill.



30 H. P., 60 Cycle, 208 Volt. Single Phase Motor Geared to Triplex Pump.

OUR **SINGLE PHASE MOTORS** ARE

Particularly Suited for Pump Operation.

THEY WILL **START UNDER FULL LOAD** BY

Simply Closing the Primary or Secondary Circuit at any point. However distant from the motor

ONLY ONE TRANSFORMER REQUIRED.

If interested we would be pleased to have you inform us of your requirements.

M'CORMICK TURBINE.

On Vertical or Horizontal Shaft.
Especially Adapted for Electrical Work.

Gives a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with us, as we are willing to guarantee results where others have failed, no matter what make of turbine has been in use. PROVE IT FIRST

In the din of a busy plant a lamp buyer's judgment is sometimes fixed by a mere noise. Every lamp is the best lamp. But the ***Packard*** proves its place—proves it so that you know it's the lamp you want.

Take up the matter as you should. Test them all. Get the story of managers who are using the ***Packard***. You will find it popular in the A1 plants. Learn the lamp and we'll sell to you.

HEAT AND LIGHT

PROCEED FROM ONE SOURCE.

In the great laboratory of nature, heat and light are the life of the world. If the sun gave out light and no heat, or vice versa, the world would be a dead planet.

The electric station that supplies power alone is only half fulfilling its mission. Heat is as staple an article as light and quite as indispensable, and heat bills are larger than bills for lighting in most buildings.

The electric station, lighting or railway, in its exhaust steam, which it is perhaps wasting in the air, possesses the means of increasing its net income by many thousands of dollars. Scores of these steam-heating plants constructed by us are in operation now.

Our underground system of steam mains is the most complete, the most durable, the most up-to-date that experience and ingenuity can devise. Our methods of insulation and devices for providing for expansion and contraction of the underground pipes are the most perfect yet invented.

Our Condensation Meter is a correct measure of the amount of steam used by each consumer, without which the Company is liable to serious loss without being able to locate it. A meter is one of the most essential features applicable to a heating system.

For particulars write for our pamphlet. Address—

AMERICAN DISTRICT STEAM CO.

LOCKPORT, NEW YORK.

A SINGLE 27-INCH VICTOR TURBINE

mounted on horizontal shaft is shown by the cut herewith. The water is discharged at one end through the draft tube, and, in this case, the usual end thrust connected with single wheels is entirely provided for. The high speed, close regulation, great capacity, high efficiency, perfect cylinder gate and steady motion are

SALIENT FEATURES OF THE VICTOR TURBINE.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.
This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 510 pp. 380 illustrations. Price $3.00.
This is the first complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American, Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E. Dobbs. 106 pp. Price $1.00.
A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 269 illustrations. Price $1.00.
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs. 134 pp. Price 75 cents.
A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo, 48 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $4.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pp. 23 illustrations. Price $1.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pp. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Work Published, Sent on Receipt of Price.

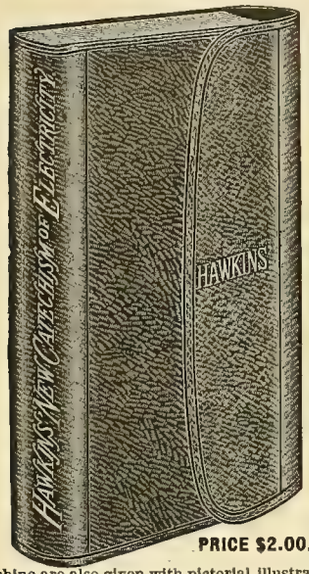
HAWKINS' NEW CATECHISM OF ELECTRICITY.
Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.
The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.
It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.
It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.
The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.
The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.
Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.
The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.
The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.
The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.
In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.
ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

GOOD BOOKS.
AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors.
By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$5.00.**
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D.
This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth, **$1.25.**
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

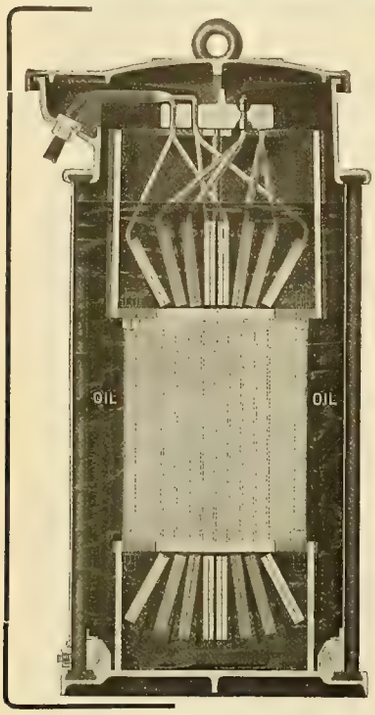
A Few More Facts About Transformers

Average Temperature



Every coil in the Westinghouse Transformer shares equally in the cooling—

(1) The exposed spread end of one coil presents the same surface in contact with cooling oil as any other. Each coil thus passes off its heat with equal facility, and no unequal expansions occur to injure the insulation.

(2) Heat generated within the interior travels, not through layers of insulation, but along highly conducting copper to the spread coil ends. This is why no "hot spots" develop, and this is why temperatures are uniform in O D and Type N Transformers.

There is practically no difference between the temperature measured by a thermometer placed between the coils and that measured in the copper by the resistance method. This is actual proof of the uniform temperature in O D and Type N Transformers.

The Man Behind the Order

is the man you want to reach. You can reach him through the

WESTERN ELECTRICIAN'S ANNUAL FALL TRADE NUMBER

This number will be dated September 13, 1902, and its principal object will be to awaken interest in the Fall and Winter trade which, competent judges prophesy, will be exceptionally large.

You can obtain a share of this business by being largely represented in the advertising columns of this important issue. Place the merits of your product before the buyers of the world through an attractive announcement and you will secure much business which you would not obtain otherwise.

Give us an idea of what you wish to advertise and we will get up something striking for you.

Reserve your space early and obtain a choice location.

Western Electrician,

510 Marquette Building, Chicago.

FIBRE-GRAPHITE COMMUTATOR BRUSH — SELF-LUBRICATING — WORKLESS

There's No Friction

with the Fibre-Graphite Commutator Brush. Being 90 per cent. pure graphite, it insures low resistance, no sparking under a varying load, and longer wear. There is no greasing required. The Fibre-Graphite is therefore the most economic brush on the market. Send for price list.

HOLMES FIBRE-GRAPHITE MFG. CO.

ANNOUNCEMENT

"THE STERRETT" OIL PUMP

IS NOW READY FOR THE MARKET.

In making this announcement we believe that we are calling the attention of the entire engineering field, and all places where oils of any degree are handled and transferred from barrel to tank and for general use, to an article that every engineer has long looked for and regularly called upon his oil dealer to supply, particularly so when cold weather has made the handling of his valve oils difficult and almost impossible with the pumps heretofore at his command.

"THE STERRETT"

pump is guaranteed to pump any article that is in a liquid form, and handles heavy valve oils as easily as ordinary pumps will kerosene. It is made of seamless brass tubing and durable in every part. There is no leakage of oil, which makes it the cleanest pump to use ever placed on the market.

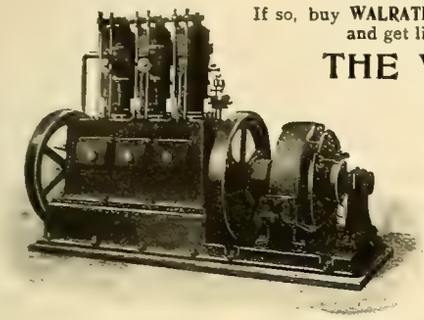
Ask your dealer for it or send direct to us. Money refunded if not satisfactory after 30 days' trial. Descriptive circulars on request. **PRICE, $3.50.**

Manufactured by

STERRETT PUMP COMPANY,

NO. 69 EAST SIXTH ST., ST. PAUL, MINN.

ARE YOU LOOKING FOR MONEY?



If so, buy **WALRATH GAS OR GASOLINE ENGINES** and get light on the subject.

THE WALRATH

Received the Highest Award at the Pan-American Exposition.

It will produce as good a commercial light as that of an automatic steam engine, either belted or direct connected generator. Simple, Economical and Reliable. Send for Catalogue W.

MARINETTE IRON WORKS MFG. CO.,

MARINETTE, WIS.

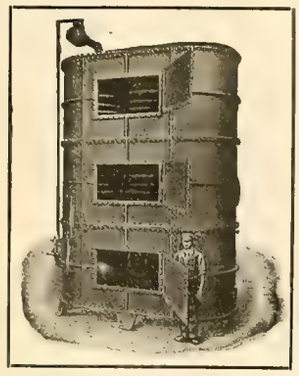
When You Save Steam,



You Economize in Fuel, and

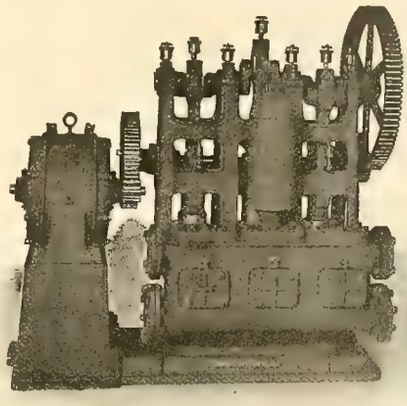
ECONOMY OF FUEL means an increased bank account. This result is secured by

Stilwell's Feed-Water Heater.

It uses EXHAUST STEAM and delivers PURE HOT WATER TO YOUR BOILERS.

We also make STEAM POWER and ELECTRIC PUMPING MACHINERY for all purposes, including

Water Works Pumps,



Jet and Surface CONDENSERS, AIR COMPRESSORS,

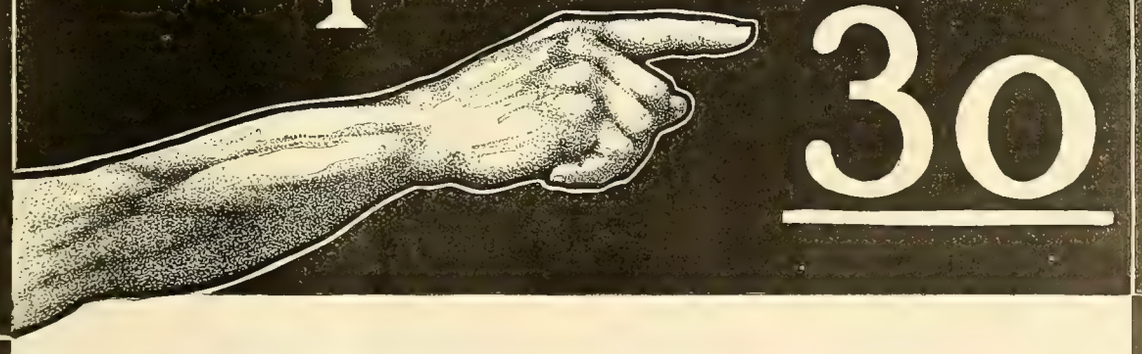
Cottonseed and Linseed Oil Machinery, Filter Presses and Victor Turbines.

IF INTERESTED ADDRESS

The Stilwell-Bierce & Smith-Vaile Co.,

P. O. Box 257, DAYTON, OHIO, U. S. A.

September 30



Grasp the opportunity now almost out of your reach, and get a good technical education. The

FREE SCHOLARSHIPS

which, through the generosity of the founders, we have been able to offer, are almost exhausted, and, on the thirtieth of September, the offer will positively be

WITHDRAWN.

Applications for the few remaining scholarships will be considered strictly in the order received, and none postmarked later than September 30th will be accepted. Students can be enrolled after that date only at our regular tuition ($50.00).

The opportunity of a lifetime for an ambitious young man to get a technical education. The courses are particularly adapted for practical **Electricians, Mechanics and Engineers,** who need the theory of their trades to prepare themselves for better positions,—such as **Chief Engineers, Superintendents of Motive Power, Managers of Electric Railroads, Master Mechanics, etc.**

Successful applicants will have no expense except for postage and text-books.

Courses given in **Mechanical, Electrical, Stationary, Locomotive, Marine and Textile Engineering, Mechanical Drawing, Heating, Ventilating and Plumbing.** Thorough instruction in **Mechanical Drawing** is included with each course.

Examination credits count toward Degree at Resident Technical School.

Handbook describing courses, methods and regular terms, sent upon request.

AMERICAN SCHOOL OF CORRESPONDENCE, BOSTON, MASS., U.S.A.

Ad Man's On His Vacation, So Here Goes For Letting the Other Fellow Talk.

No. 371.

"We have used the Packard lamp for the last two years and it has given general satisfaction. We are very much pleased with it and have had no complaints from the users whatever. As far as we know, this is the only lamp used in this city, which fact alone speaks highly in its favor. You are at liberty to use this testimony if it is of any value to you.
Yours truly,"

The above is one of hundreds of similar letters on file in our office.

What the I. C. S. did for me

When I took up the training in electrical engineering of the International Correspondence Schools, of Scranton, Pa., I was an apprentice in an electrical instrument-making establishment. As I proceeded with my studies, I advanced in my work and soon raised myself to be instrument maker. Soon after, I accepted a better paying position as designer of arc lamps. Here I advanced very rapidly and was soon put in charge of the testing room. Later, I left this place to accept a position as electrician with the Long Island Railroad's trolley line at Rockaway Beach, and a month later was placed in charge. My salary is now seven times as much as when I enrolled in the I. C. S. The I. C. S. has also greatly benefited numerous other young men to whom I have recommended it, which goes to show that the I. C. S. system is thoroughly practical.

ROBERT W. BROADMANN,
22 Second Ave., College Point, N. Y.

Do You Want A Better Salary and Postion?

Such evidence as the above is proof conclusive of the value of our training. Actual results is the best argument. We have hundreds of endorsements like the above—just as strong, just as convincing. Isn't this one convincing enough to induce you to cut out, fill in, and send us the attached coupon with **X** marked before the position for which you wish to be trained?

DO IT ANYWAY

International Correspondence Schools
Box 1002, Scranton, Pa.

Please explain how I can qualify for the position marked **X** below

	Electrical Engineer		Fire Underwriters' Inspector

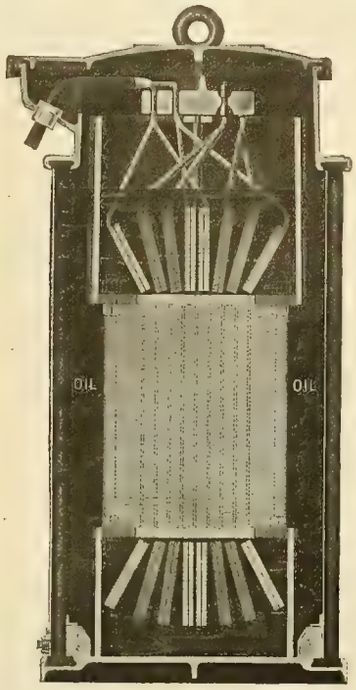
A Few Facts About Transformers

Average Temperature



Every coil in the Westinghouse Transformer shares equally in the cooling—

(1) The exposed spread end of one coil presents the same surface in contact with cooling oil as any other. Each coil thus passes off its heat with equal facility, and no unequal expansions occur to injure the insulation.

(2) Heat generated within the interior travels, not through layers of insulation, but along highly conducting copper to the spread coil ends. This is why no "hot spots" develop, and this is why temperatures are uniform in **O D and Type N Transformers.**

There is practically no difference between the temperature measured by a thermometer placed between the coils and that measured in the copper by the resistance method. This is actual proof of the uniform temperature in O D and Type N Transformers.

ELECTRICITY MADE SIMPLE.

233 Pages. 108 Illustrations. **By CLARK CARYL HASKINS.** Cloth $1.00. Paper .50.

A BOOK DEVOID OF TECHNICALITIES—SIMPLE, PLAIN AND UNDERSTANDABLE.

There are many elementary books about electricity upon the market, but this is the first one presenting the matter in such shape that the layman may understand it, and, at the same time, not written in a childish manner.

This little work is not intended for the instruction of experts, nor as a guide for professors. The author has endeavored to bring the matter down to the level of those whose opportunities for gaining information on the branches treated have been limited.

Four chapters are devoted to Static Electricity; three each to Chemical Batteries and Light and Power; two each to Terrestrial Magnetism and Electro-Magnetism; one each to Atmospheric Electricity; Lightning Rods; Electro-Chemistry; Applied Electro-Magnetism; Force, Work and Energy; Practical Application of Ohm's Law; also a chapter upon Methods of Developing Electricity, other than Chemical.

The large number of examples that are given to illustrate the practical application of elementary principles is gaining for it a reputation as a text-book for schools and colleges.

FOR ENGINEERS, DYNAMO MEN, FIREMEN, LINEMEN, WIREMEN AND LEARNERS. FOR STUDY OR REFERENCE.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

HEAT AND LIGHT
PROCEED FROM ONE SOURCE.

In the great laboratory of nature, heat and light are the life of the world. If the sun gave out light and no heat, or vice versa, the world would be a dead planet.

The electric station that supplies power alone is only half fulfilling its mission. Heat is as staple an article as light and quite as indispensable, and heat bills are larger than bills for lighting in most buildings.

The electric station, lighting or railway, in its exhaust steam, which it is perhaps wasting in the air, possesses the means of increasing its net income by many thousands of dollars. Scores of these steam-heating plants constructed by us are in operation now.

Our underground system of steam mains is the most complete, the most durable, the most up-to-date that experience and ingenuity can devise. Our methods of insulation and devices for providing for expansion and contraction of the underground pipes are the most perfect yet invented.

Our Condensation Meter is a correct measure of the amount of steam used by each consumer, without which the Company is liable to serious loss without being able to locate it. A meter is one of the most essential features applicable to a heating system.

For particulars write for our pamphlet. Address—

LANCASTER, OHIO, U.S.A.
Carbons of all kinds and for all purposes.

BETTER BUY BUCKEYE, BECAUSE,

We inspect the size and appearance of all the joints connecting the filament to the platinum and leading in wires. If the joints are too big, it is harder to exhaust the lamp and the chances are greater of imperfect exhaustion. If the joints are too small the connection may break and the lamp go out earlier in its life.

CHICAGO EDISON COMPANY, 139 Adams Street, CHICAGO.

CROCKER-WHEELER COMPANY

MANUFACTURERS AND ELECTRICAL ENGINEERS.

Generators and Motors

FOR LIGHTING AND POWER INSTALLATIONS.

Belted and Direct Connected Dynamos that are Compact and Neat in Design, Strong in Construction, Non-Sparking and Cool in Operation.

OUR SYSTEM OF SHOP EQUIPMENTS HAS THE FOLLOWING STRONG POINTS IN ITS FAVOR.

Motors have variable speed, under instant control and over any range.
Every speed constant regardless of load.
Controllers simple, rugged and convenient.
Makes high cutting speeds easy by superior facilities for manipulation.
Permits the use of small motors.
Adapted to existing shops.
Employs standard motors.
Output of machine tools greatly increased over belt drives.

Main Office and Works: - - AMPERE, N. J.

SALES OFFICES IN ALL LARGE CITIES.

New Standard Specialties.

DRY CELL.

If kept out of the sun, in a cool dry place, this cell will not run down on the shelf in two years, and at the end of that time will be as good as other makes fresh from the factory. To maintain its superiority to all others, no expense is spared and only the best materials and chemicals are used in its manufacture.

This cell will save the consumer money, because a fewer number will perform a given amount of work four times as long as any other cell of equal size.

ELECTROMOTIVE FORCE 1.52 VOLTS.

MAXSTADT Patent Improved AMERICAN JOINTS

We manufacture our joints under the **patent** we advertise.

PATENTED AUGUST 14, 1900, IN THE UNITED STATES AND FOREIGN COUNTRIES

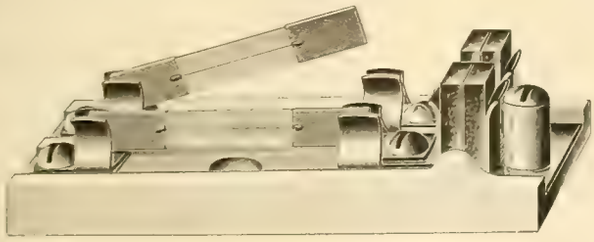
No. 882.

The illustration, No. 882, represents the Maxstadt Patent Improved American Joint, ready for use. Made in copper and tinned steel, for copper and galvanized iron wire. This joint is absolute. It costs less money than any joint on the market to day.
Prices and samples an application.

SOLE MANUFACTURERS OF THE

MAXSTADT PATENT IMPROVED FUSIBLE CUT-OUT CARBON LIGHTNING ARRESTERS.

No 416 represents a full size Maxstadt Patent Improved Double-Pole Porcelain Cut Out and Carbon Lightning Arrester. The object of this Arrester is to economize space. Its compactness and efficiency has made it the most practical combination cut out and lightning arrester on the market to-day, and it costs less money than any other arrester made.



Patented March 31, 1891. No. 416.

The above is one of the many different styles of Maxstadt Fuse Blocks we manufacture. We can also furnish fuses, paper sleeves, fuse wire and links.
Write for prices and samples.

Manufacturers of the Maxstadt Patent Improved American Joint:

Arcade in the Colonial Hotel of Cleveland, Ohio. This hotel has in use 150 Western Electric Company Type 270 Arc Lamps.

WESTERN ELECTRIC COMPANY.
CHICAGO—SAINT LOUIS. PHILADELPHIA—NEW YORK.

ESTABLISHED 1875.

OUR VARIOUS TYPES OF

MULTI-SPEED ELECTRIC MOTORS

ARE ILLUSTRATED BELOW.

We call them MULTI-SPEED, because an absolutely unbroken range is furnished between the highest and lowest points—in other words EVERY imaginable speed is given within these limits—a most desirable feature when fine adjustment or great variety is desired.

They will carry their full load at all speeds within their range without sparking, with an efficiency practically as high at one speed as another.

Efficiency in all cases is up to the standard of modern practice.

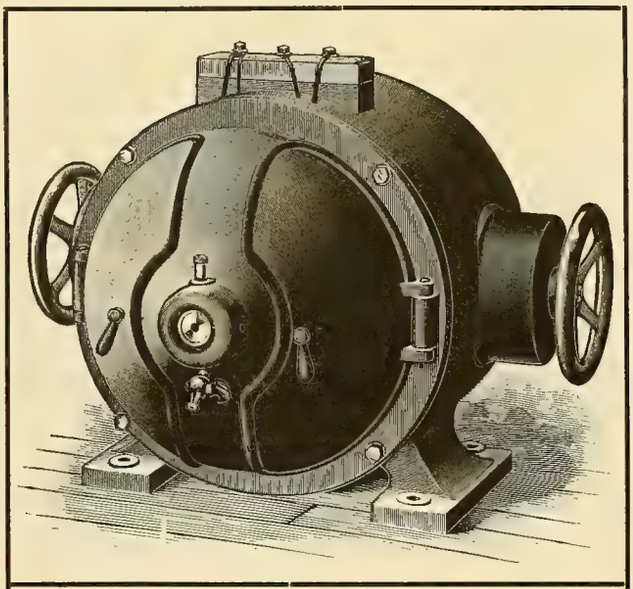
The above results are arrived at without use of rheostats or controllers.

A RADICAL DEPARTURE FROM OLD TIME METHODS OF MOTOR SPEED REGULATION!

PERMIT US TO FURNISH YOU FURTHER DETAILS.

STOW MFG. CO., BINGHAMTON, N. Y.

Gen'l European Agents: Selig, Sonnenthal & Co., 85 Queen Victoria St., London, Eng. New York Office: 136 Liberty St., New York.



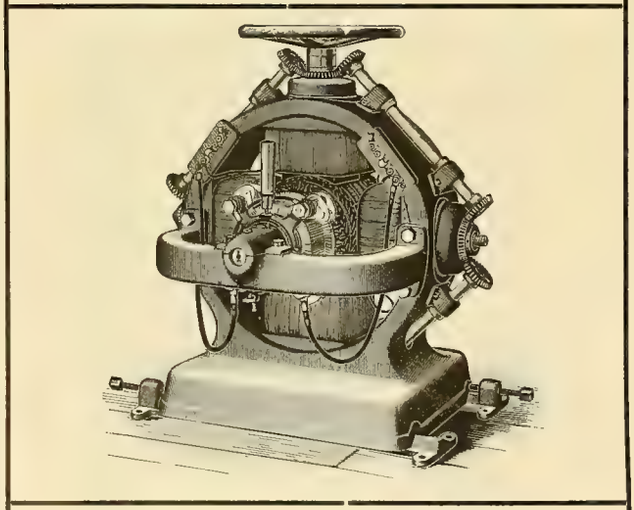
MULTI-SPEED MOTOR, TYPE S. B.

This motor has cast steel frame, and balanced field. We are prepared to furnish them from 1 H.-P. up to and including 10 H.-P.

The cut shows the fully enclosed type, but if the four doors are removed, giving full ventilation, the motor will carry about one-third more load. The speed is varied by use of one or both hand wheels, depending upon variation desired.

The 1 H.-P. has a speed range of 70%, the 10 H.-P. 150%, AND ALL INTERMEDIATE speeds.

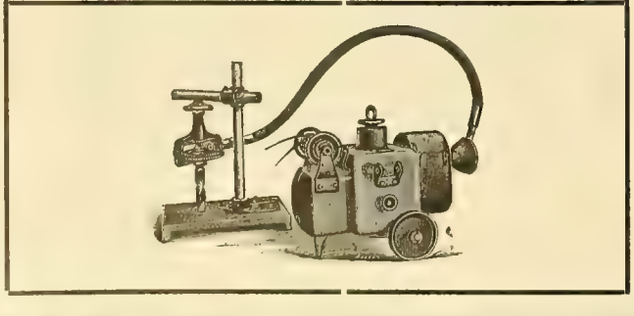
Its form specially fits it for driving Lathes and smaller tools.



MULTI-SPEED MULTI-POLAR TYPE.

This motor, as will be observed from cut, is of heavier construction than the type S. B. The four pole pieces are all alike, and each one provided with similar windings, and as the adjustment of the four plungers is made simultaneously by means of hand wheel and gearing, it will be seen that the armature rotates within a symmetrical magnetic structure—we make them in sizes from 5 H. P. up. The machine shown in cut is of 6 H.-P. capacity and has a minimum speed of 700 revolutions, with a maximum of 1,500. With motors of greater H.-P. a larger speed range is given.

The cut shows the open type, but the design is such that suitable inclosing heads can be attached when desired.



COMBINATION OF

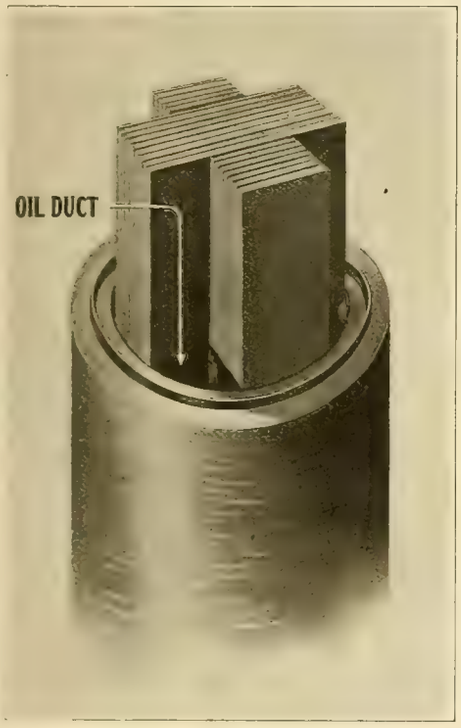
FLEXIBLE SHAFT AND MULTI-SPEED ELECTRIC MOTOR.

This is a modified type of our Multi-Speed Motor specially designed to meet the exacting requirements of a portable tool. It was a good machine when first placed on the market, four or five years ago—it's better now—the weak points have been eliminated as fast as practical use developed them, and the entire plant strengthened and improved in many ways. It is a practical machine shop in itself—Drilling, Tapping, Reaming, Emery Grinding, etc., with equal facility. No portable tool on the market excels it in efficiency. None equal it, we think, in economical consumption of power. Simply connect wire on reel with power current and the plant is ready for work. Its range is limited only by the length of wire on reel. Many hundreds in use, both in this country and Europe, giving excellent satisfaction.

GENERAL ELECTRIC COMPANY'S

TYPE "H" TRANSFORMERS

CORE TYPE.



In larger sizes of Type H Transformers, where it would not be economical to limit the thickness of coils to one and one-half inches, ducts for the circulation of cooling oil are provided between the windings and the iron core.

Unequal expansion of transformer windings, which always causes weakening of the mechanical and electrical strength of the insulation, can be avoided only when temperatures throughout the windings are maintained perfectly uniform.

It is evident that this uniform heating can exist only when all parts of the winding are at a uniformly short distance from the cooling oil.

Type H Transformers--even of the largest size--never have any part of the copper more than one and one-half inches from the cooling oil. Therefore TEMPERATURES AND EXPANSIONS ARE UNIFORM in all parts--a result even more desirable than low average temperature.

WHY THEN BUY IT?

Such a lamp is generally cheap—in first cost. After a few months, when it commences to get in its worry—which has been bought and paid for—things will begin to look a little different. You will then begin to think of the Toerring 200-hour arc lamp—guaranteed in construction, operation and life, and the next lot of lamps you will buy will be Toerring Lamps. Why not save the worry and buy them at once?

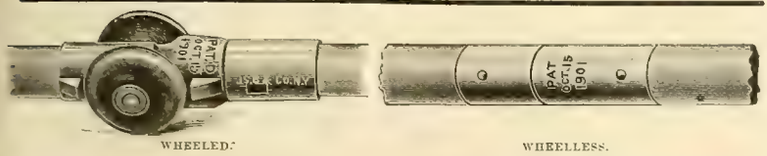
Patent Causes. Patent Soliciting.



WHEELED. WHEELLESS.

Villard Automatic Wheeled and Wheelless Conduit Rods

Are Coupled and Uncoupled Instantly and with Ease.

Furnished with and without wheels, as desired. They will not buckle or form a zig-zag line, and, with wheels, friction is removed, making them very light running. They are perfectly rigid when pushed, and become flexible when pulled. The rods cannot become uncoupled by any means in the ducts. The rear end of the rod has to be raised to an angle of about 45 degrees to uncouple it. One man can push with ease 600 feet, and a hard blow can be struck with telling effect without the slightest injury to the rods. The wheels serve as duct cleaners as well as to remove friction. The castings are of bronze with wheels of chilled cast iron. The rods are made of hickory, well seasoned in oil to prevent decay. Prices and circulars on application.

DAM!

That is what every user of water-power wants and very few have. Most dams leak. "The Gravity Dam" is the name of a 78 page book on dam construction. It describes all kinds of dams that leak and break and tells why they leak and break. It also describes a dam that will neither leak, break nor wash out.

THIS BOOK SENT FREE OF CHARGE

To every present or prospective user of water-power who sends his address and five cents in stamps to pay postage.

Sent prepaid on receipt of price by the

Electrician Publishing Co., 510 Marquette Building, CHICAGO.

OUR SUCCESS

WE HAVE BEEN IN BUSINESS less than ten years, time after time we have increased our facilities, only to find that other additions were necessary. When we moved into our present quarters 36-58 Jackson Blvd. three years ago we thought we had sufficient space for ten years growth but although every foot of space has been utilized, our building has become so crowded that we have found it necessary to rent lofts on both Jackson Blvd. and Van Buren St. This gives us a large amount of additional space for the manufacture of the only RIGHT KIND OF TELEPHONES AND SWITCHBOARDS and will enable us not only to fill our orders with promptness but to maintain our reputation of producing better telephones and switchboard apparatus than our competitors. If you want to keep at the head of the procession use AMERICAN TELEPHONES AND SWITCHBOARDS.

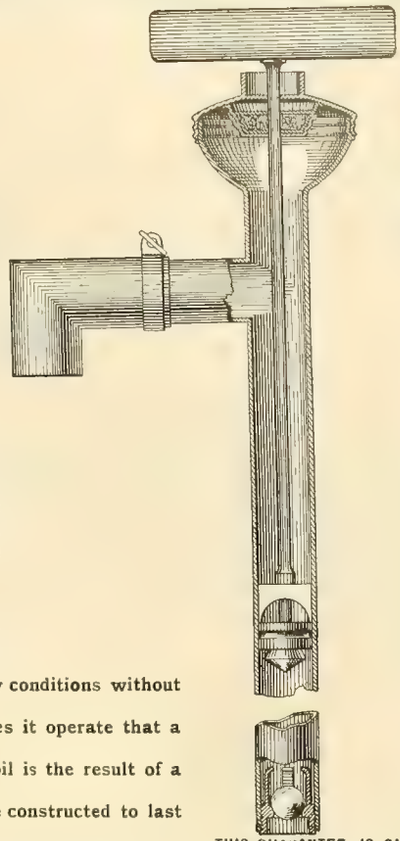
Cut showing pump in operation.
Notice the stream, then try and get it with any other pump.

DEMAND IS THE MOTHER OF THE PUMP.
THE PUMP FILLS PERFECTLY EVERY DEMAND.

THE STERRETT OIL PUMP



Is designed to handle heavy valve oils especially, and is guaranteed to pump any article that is in a liquid form. You have never had a pump that would do this work satisfactorily, because there has never been one made. The demand has always existed but never satisfied until "The Sterrett" was produced.

"THE STERRETT" possesses **FIVE** distinct points of superiority over any other oil pump on the market.

1ST—CLEANLINESS: Not a drop of oil escapes outside of the pump. It can be used at any time and under any conditions without soiling the hands or smearing oil over everything in the neighborhood.

2ND—EASE OF OPERATION: Its action is free and the slightest movement brings it into action. So easy does it operate that a child can handle it to its full capacity.

3RD—CAPACITY: No other pump on the market can compare with it in the volume of the flow. A full quart of oil is the result of a full stroke of the pump.

4TH—DURABILITY: The pump is made of seamless brass tubing; all parts are free from rust or breakage and are constructed to last a lifetime.

5TH—ADAPTABILITY: The general construction of the pump and the addition of the extension spout with its ability to pump anything from water to molasses, makes its adaptability greater than any other pump ever offered on the market.

You will never know the satisfaction of handling your oils easily until you try "THE STERRETT." **AFTER FIVE MINUTES' TRIAL YOU WOULD NOT PART WITH IT AT ANY PRICE.**

All jobbers handle it, or will be sent direct upon receipt of the retail price, **$3.50.** Manufactured by

THIS GUARANTEE IS ON EVERY PUMP:
If this pump does not prove satisfactory after 30 days' trial, return it and your money will be refunded without question. STERRETT PUMP CO., St. Paul, Minn.

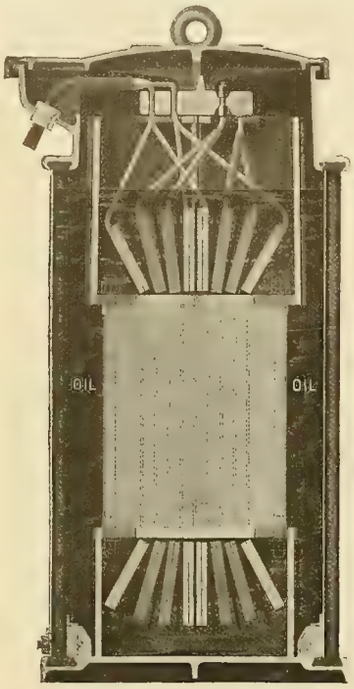
A Few Facts About Transformers

Average Temperature



Every coil in the Westinghouse Transformer shares equally in the cooling—

(1) The exposed spread end of one coil presents the same surface in contact with cooling oil as any other. Each coil thus passes off its heat with equal facility, and no unequal expansions occur to injure the insulation.

(2) Heat generated within the interior travels, not through layers of insulation, but along highly conducting copper to the spread coil ends. This is why no "hot spots" develop, and this is why temperatures are uniform in O D and Type N Transformers.

There is practically no difference between the temperature measured by a thermometer placed between the coils and that measured in the copper by the resistance method. This is actual proof of the uniform temperature in O D and Type N Transformers.

FOR TRANSFORMER BOOKLETS ADDRESS NEAREST SALES OFFICE OF THE

WESTINGHOUSE ELECTRIC and Manufacturing Co.

TYPE A OIL TRANSFORMERS.

EASE OF INSTALLATION—An examination of the illustrations and diagrams in this bulletin will reveal the refinement of design and construction of the details of these tranformers which indicate their general superiority over other transformers. Special attention has been paid to the matter of ease of installation. Sizes from .6 Kw. to 2.5 Kw. capacity are equipped with a single hanger iron illustrated in Fig. 7. Capacities from 3 to 25 Kw. are equipped with double hanger irons as illustrated in Fig. 8, while sizes above 25 Kw. are considered too large for installation on hanger irons and are furnished with lugs or feet on the base of the case, as in the majority of cases they will be used for sub-station work.

SUSPENSION HOOKS.—The suspension hook furnished with Type A transformers is a distinct novelty and possesses valuable features which will be appreciated by the practical engineer. Instead of attaching the hanger irons to the transformer case by bolts and nuts as is common practice, the hooks are provided with studs which properly fit into the lugs cast on the transformer case. In addition to the studs on the hooks a pivoted locking cam is mounted on the hook at a proper distance from the stud to force the stud up into the pocket. These suspension hooks may be readily attached to the transformer before it is elevated to its position on the pole, or the hooks can be set in place on the pole and the transformer raised in the ordinary manner until the pockets (AA) on the back of the case engage with the rivets or studs (BB) on the hanger irons. If the hooks are attached to the transformer before it is elevated, the eccentric cams (CC) should be driven home with a hammer with just sufficient force to drive the rivets well up into the pockets. The same procedure is followed after raising the transformer to the hooks previously mounted on the pole. These hooks are intended to overcome the inconvenience caused by the loss of bolts or nuts when installing and the difficulty sometimes found in removing old transformers when the bolts become rusted. These new hooks do not necessitate using a wrench or any other tool in mounting. Their other good qualities are very evident.

SUSPENSION HOOKS FOR "WOOD" TYPE A TRANSFORMERS

A *Complete* Bulletin on Wood Type A Oil Transformers will be sent to any address — A postal will bring it—from the nearest office.

DO YOU WANT STREET-RAILWAY BUSINESS?

IF you wish to increase your business with the street-railway interests of the world, you should be represented in the WESTERN ELECTRICIAN of October 4th and 11th. These two issues will cover the annual meeting of the American Street-Railway Association to be held in Detroit, October 8th, 9th and 10th. The attendance promises to be unusually large. Many concerns wishing to exhibit at this convention were unable to obtain space.

The WESTERN ELECTRICIAN of October 4th will be distributed at the convention, and the issue of October 11th will contain the report of the meeting.

A large attractive announcement would enable you to place the merits of your products before almost every possible buyer.

Give us an idea of what you wish to advertise, and we will be pleased to get up an attractive announcement for your approval.

THE CUTLER-HAMMER MFG. CO.

AGENTS: STURTEVANT ENGINEERING CO., LONDON, ENG. KILBOURNE & CLARK CO., SEATTLE, WASH.

MAIN OFFICES AND FACTORY: MILWAUKEE. BRANCH OFFICES: NEW YORK-CHICAGO.

An INCANDESCENT LAMP represents a large investment of capital, ingenuity and skilled workmanship, it is sold at a price so low as to necessitate eternal vigilance in cutting costs to a minimum. A successful lamp manufacturer can not afford to experiment with poor materials. This explains the popularity of

BAKER & CO.'S PLATINUM

408 N. J. R. R. Ave., NEWARK, N. J. 120 LIBERTY ST., NEW YORK.

We buy and Refine Platinum Scrap also.

The "Electra" Carbons are the recognized standard all the world over.

ELECTRA

HIGHEST GRADE NUERNBERG CARBONS

THE SUN'S GREATEST RIVAL

HUGO REISINGER, 11 Broadway, New York.

There are no Carbons better than the "Electra" and none "just as good."

J. E. MOTT & CO.

HUNTINGTON, IND.—MARION, IND.

CONTRACTORS

CONSULTING, MECHANICAL AND ELECTRICAL

ENGINEERS

ESTIMATES FURNISHED ON ALL KINDS OF ELECTRICAL CONSTRUCTION.

Electric Railways Built by us:

For the Milwaukee, Racine & Kenosha Electric Ry. Co., from South Milwaukee to Kenosha, 24 miles.

For the Chicago & Milwaukee Electric Ry. Co., from Waukegan to N. Evanston 26 miles.

For the Ft. Wayne (Ind.) Southwestern Traction Co., from Ft. Wayne to Wabash, 45 miles.

We have been awarded the contract for the construction of an electric light plant at Lebanon, Tenn.

EDWARDS AND CO.

ELECTRO-MECHANICAL GONG.

Is entirely encased in iron and is weatherproof. The mechanism is very powerful and gives 375 blows to each winding. Continuous ringing or single stroke.

NEW YORK N.Y.

CROCKER-WHEELER

Direct-Current Machinery.

Accuracy in electrical design produces sparkless running.

Strength of insulation and mechanical features insure durability.

Graceful lines result in attractive equipments.

M'CORMICK TURBINE.
On Vertical or Horizontal Shaft.
Especially Adapted for Electrical Work.

Gives a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with us, as we are willing to guarantee results where others have failed, no matter what make of turbine has been in use. ANNOUNCEMENT

"THE STERRETT" OIL PUMP
IS NOW READY FOR THE MARKET.

In making this announcement we believe that we are calling the attention of the entire engineering field, and all places where oils of any degree are handled and transferred from barrel to tank and for general use, to an article that every engineer has long looked for and regularly called upon his oil dealer to supply, particularly so when cold weather has made the handling of his valve oils difficult and almost impossible with the pumps heretofore at his command.

"THE STERRETT"

pump is guaranteed to pump any article that is in a liquid form, and handles heavy valve oils as easily as ordinary pumps will kerosene. It is made of seamless brass tubing and durable in every part. There is no leakage of oil, which makes it the cleanest pump to use ever placed on the market.

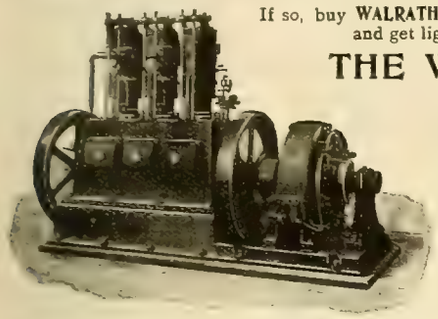
Ask your dealer for it or send direct to us. Money refunded if not satisfactory after 30 days' trial. Descriptive circulars on request. **PRICE, $3.50.**

Manufactured by

STERRETT PUMP COMPANY,

NO. 69 EAST SIXTH ST., ST. PAUL, MINN.

ARE YOU LOOKING FOR MONEY?



If so, buy WALRATH GAS OR GASOLINE ENGINES and get light on the subject.

THE WALRATH

Received the Highest Award at the Pan-American Exposition.

It will produce as good a commercial light as that of an automatic steam engine, either belted or direct connected generator. Simple, Economical and Reliable. Send for Catalogue W.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.

This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 510 pp. 380 illustrations. Price $3.00

This is the first complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E Dobbs. 106 pp. Price $1.00.

A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 265 illustrations. Price $1.00.

Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp 288 illustrations. Price $1.50.

In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs 134 pp. Price 75 cents.

A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo, 48 pp. Price 25 cents.

This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $4.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pp. 23 illustrations. Price $1.00

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pp. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Work Published, Sent on Receipt of Price.

OUR SUCCESS

WE HAVE BEEN IN BUSINESS less than ten years, time after time we have increased our facilities, only to find that other additions were necessary. When we moved into our present quarters 36-58 Jackson Blvd. three years ago we thought we had sufficient space for ten years growth but although every foot of space has been utilized, our building has become so crowded that we have found it necessary to rent lofts on both Jackson Blvd. and Van Buren St. This gives us a large amount of additional space for the manufacture of the only RIGHT KIND OF TELEPHONES AND SWITCHBOARDS and will enable us not only to fill our orders with promptness but to maintain our reputation of producing better telephones and switchboard apparatus than our competitors. If you want to keep at the head of the procession use AMERICAN TELEPHONES AND SWITCHBOARDS.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

DO YOU WANT STREET-RAILWAY BUSINESS?

IF you wish to increase your business with the street-railway interests of the world, you should be represented in the WESTERN ELECTRICIAN of October 4th and 11th. These two issues will cover the annual meeting of the American Street-Railway Association to be held in Detroit, October 8th, 9th and 10th. The attendance promises to be unusually large. Many concerns wishing to exhibit at this convention were unable to obtain space.

The WESTERN ELECTRICIAN of October 4th will be distributed at the convention, and the issue of October 11th will contain the report of the meeting.

A large attractive announcement would enable you to place the merits of your products before almost every possible buyer.

Give us an idea of what you wish to advertise, and we will be pleased to get up an attractive announcement for your approval.

RESERVE YOUR SPACE NOW, AND
OBTAIN A CHOICE LOCATION : :

DAM!

That is what every user of water-power wants and very few have. Most dams leak. "The Gravity Dam" is the name of a 78-page book on Dam construction. It describes all kinds of dams that leak and break and tells why they leak and break. It also describes a dam that will neither leak, break nor wash out.

THIS BOOK SENT FREE OF CHARGE

To every present or prospective user of water-power who sends his address and five cents in stamps to pay postage.

NEW YORK N.Y

ANNOUNCEMENT

"THE STERRETT" OIL PUMP
IS NOW READY FOR THE MARKET.

In making this announcement we believe that we are calling the attention of the entire engineering field, and all places where oils of any degree are handled and transferred from barrel to tank and for general use, to an article that every engineer has long looked for and regularly called upon his oil dealer to supply, particularly so when cold weather has made the handling of his valve oils difficult and almost impossible with the pumps heretofore at his command.

"THE STERRETT"

pump is guaranteed to pump any article that is in a liquid form, and handles heavy valve oils as easily as ordinary pumps will kerosene. It is made of seamless brass tubing and durable in every part. There is no leakage of oil, which makes it the cleanest pump to use ever placed on the market.

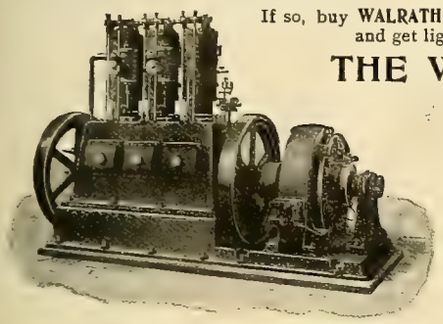
Ask your dealer for it or send direct to us. Money refunded if not satisfactory after 30 days' trial. Descriptive circulars on request. **PRICE, $3.50.**

Manufactured by

STERRETT PUMP COMPANY,

NO. 69 EAST SIXTH ST., ST. PAUL, MINN.

ARE YOU LOOKING FOR MONEY?



If so, buy **WALRATH GAS OR GASOLINE ENGINES** and get light on the subject.

THE WALRATH

Received the Highest Award at the Pan-American Exposition.

It will produce as good a commercial light as that of an automatic steam engine, either belted or direct connected generator. Simple, Economical and Reliable. Send for Catalogue W.

WHEELED. WHEELLESS.

Villard Automatic Wheeled and Wheelless Conduit Rods
Are Coupled and Uncoupled Instantly and with Ease.

Furnished with and without wheels, as desired. They will not buckle or form a zig-zag line, and, with wheels, friction is removed, making them very light running. They are perfectly rigid when pushed, and become flexible when pulled. The rods cannot become uncoupled by any means in the ducts. The rear end of the rod has to be raised to an angle of about 45 degrees to uncouple it. One man can push with ease 600 feet, and a hard blow can be struck with telling effect without the slightest injury to the rods. The wheels serve as duct cleaners as well as to remove friction. The castings are of bronze with wheels of chilled cast iron. The rods are made of hickory, well seasoned in oil to prevent decay. Prices and circulars on application.

Sales Representatives Wanted.

A large, successfull and well established machinery manufacturing company, West of Ohio, doing a constantly increasing business and having an enviable reputation with its present product is prepared to place upon the market a line of

ELECTRICAL MACHINERY

including alternating-current generators up to 1,000 K. W. and direct-current generators and motors of corresponding size.

Only high-grade sales representatives are wanted to sell on commission or otherwise.

Correspondence is desired with established firms or others who are properly equipped and are experienced in the sale of electrical machinery.

All communications will be considered confidential.

Address BOX 109, care Western Electrician, 510 Marquette Building, Chicago.

WANTED.

A thoroughly competent man to superintend an electric light and power plant in a city of 10,000 inhabitants: must be a business getter and thoroughly up-to-date on power and lighting contracts. Excellent opportunity for a hustler. Applications must be accompanied by a photograph of the applicant and testimonials from previous employers. These will be returned in any event; also state salary expected. Address BOX 115, care Western Electrician, 510 Marquette Bldg., Chicago.

FOR SALE.

Electric Light and Steam Heating Plant in thriving town of 2,500 people; 10-year contract with city at $1,900 per year, with nine years to run. One hundred patrons with 1,900 incandescent lights; five 1,200 C. P. arc and 89,32 C. P. incandescents on streets, 90,000 feet of wire on streets, 415 poles, 75 meters, 45 transformers. Plant is modern and new, two dynamos, two engines, two boilers and as complete as can be made in new isolated building. Has steam vacuum heating system using exhaust steam, 13 patrons, including hotel, and using less than one-quarter of the exhaust steam, and balance of business district anxious for extension of system to their places. All light patrons on meter basis, 15 cents per 1,000 watts. Will sell on easy terms. Further information cheerfully given by calling upon or addressing STEWARD BROTHERS, Plano, Ill.

XXXIV.—Automatic Exchanges. XXXV.—Storage Batteries. XXXVI.—Specifications.

518 large octavo pages, 379 Illus. Price, $3.00.

This is the first complete treatise on Telephony in the English language. The author was peculiarly qualified for the task, having been an examiner in the U. S. Patent Office in the telephonic class, and subsequently as a telephone engineer had a wide experience in every branch of telephonic work. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

Copies of this or any other electrical book published sent prepaid, to any address in the world, on receipt of price.

OUR SUCCESS

WE HAVE BEEN IN BUSINESS less than ten years, time after time we have increased our facilities, only to find that other additions were necessary. When we moved into our present quarters 36-58 Jackson Blvd. three years ago we thought we had sufficient space for ten years growth but although every foot of space has been utilized, our building has become so crowded that we have found it necessary to rent lofts on both Jackson Blvd. and Van Buren St. This gives us a large amount of additional space for the manufacture of the only RIGHT KIND OF TELEPHONES AND SWITCHBOARDS and will enable us not only to fill our orders with promptness but to maintain our reputation of producing better telephones and switchboard apparatus than our competitors. If you want to keep at the head of the procession use AMERICAN TELEPHONES AND SWITCHBOARDS.

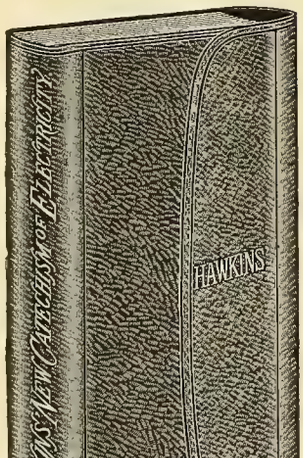
CHICAGO, ILL.

HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

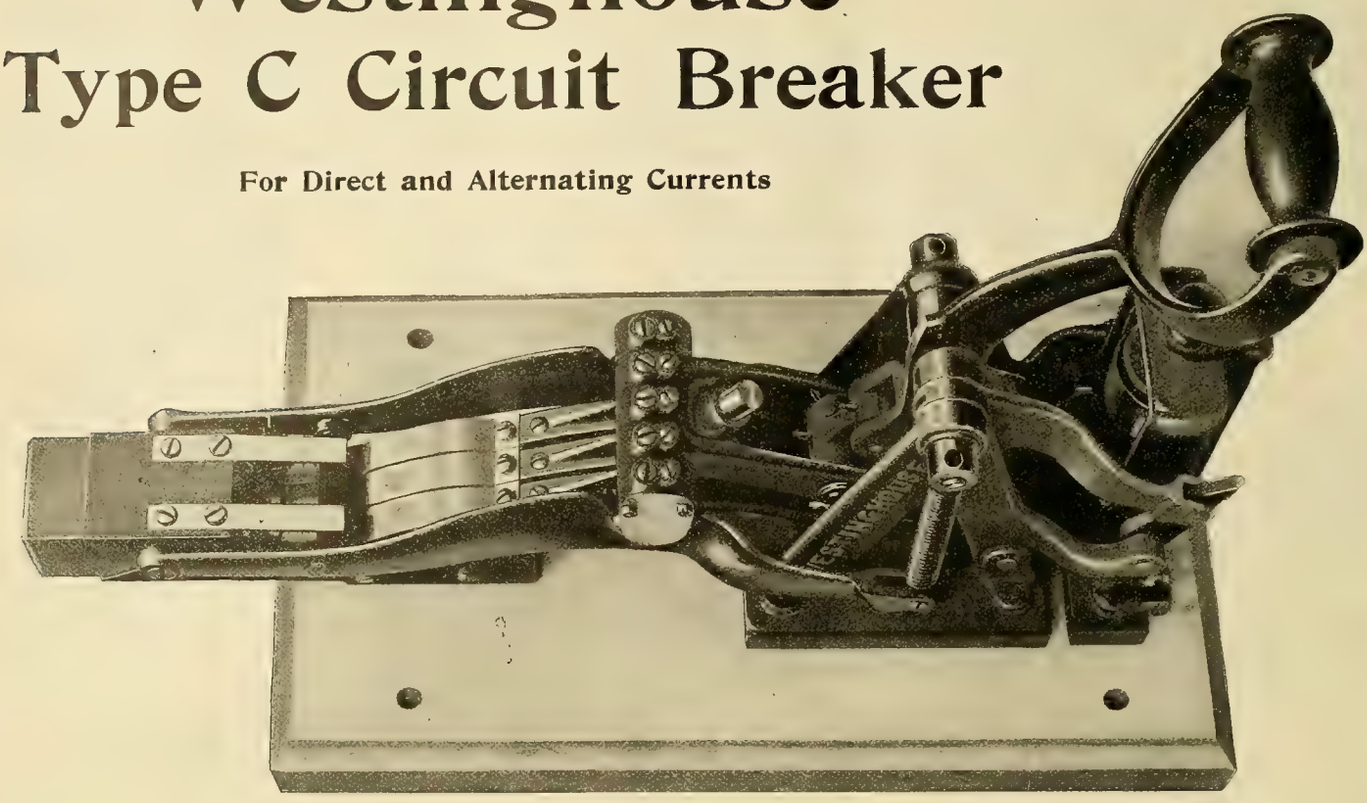
Westinghouse
Type C Circuit Breaker

For Direct and Alternating Currents



Built in sizes of 200 to 10,000 amperes, in one, two, three and four pole combinations.

For illustrated booklet on Westinghouse Type C Circuit Breakers address nearest sales office.

85d2

Manufactured by the

Westinghouse Electric & Mfg. Co., Pittsburg, Pa.

Sales Offices in All Large Cities.

Worth Having!

STEVENS' MECHANICAL CATECHISM

PRACTICAL KNOWLEDGE

FOR

Stationary and Marine Engineers, Firemen, Electricians, Motormen, Ice Machine Men and Mechanics in General.

New and Original All Modern Machinery fully described and explained. Technical Points made Clear by Word and Drawing. Questions and Answers for Civil Service Examinations, etc.

SUBJECTS TREATED:

WATER, STEAM, COMBUSTION, SMOKE PREVENTION, BOILERS, BOILER CONSTRUCTION, TESTING AND MANAGEMENT, SAFETY VALVES, INJECTORS, PUMPS AND GOVERNORS, STEAM GAUGES, LUBRICATORS, ENGINES, COMMON SLIDE VALVE, TANDEM COMPOUND, CROSS COMPOUND, RECEIVER ENGINES, HOT AIR AND COMPRESSED AIR ENGINES, TRACTION ENGINES, ELECTRIC ENGINES, AUTOMATIC AND CORLISS ENGINES, CONDENSERS, JET AND SURFACE, ECCENTRIC, BALANCED SLIDE VALVE, LINK MOTION, HORSE POWERS IN DETAIL, INDICATOR, REFRIGERATION, ABSORPTION AND COMPRESSION METHODS, BRINE AND DIRECT EXPANSION SYSTEMS, PUMPS, VALVES, TESTS, TABLES, AMMONIA, AMMONIA FITTINGS, LIQUID AIR, MACHINE SHOP PRACTICE, STANDARD NUMBERS AND RULES, PULLEY SPEED CALCULATION, SQUARE ROOT, LEVERAGE, ELECTRICITY, DYNAMOS, ACCUMULATOR, RHEOSTAT, TRANSFORMER, VARIETIES OF DYNAMOS, PARALLEL AND SERIES WIRING, THREE-WIRE SYSTEM, MANAGEMENT AND CARE OF ELECTRIC PLANT, REPAIRS, ELECTRICAL MEASUREMENTS, MOTORS, STATIONARY, TROLLEY AND THIRD RAIL SYSTEMS, CONTROLLER, ELECTRIC LOCOMOTIVE, ELECTRIC HEATING AND COOKING, HOUSE WIRING, DIFFERENTIAL GEAR, FRICTION CLUTCH, COMPOUND CYLINDERS, REVERSING GEAR, THE STACKER. ALSO, THE ELEMENTS OF ALGEBRA MADE EASY.

336 Pages. 240 Illustrations.

PRICE, $1.00. Sent anywhere prepaid on receipt of price.

ELECTRICIAN PUBLISHING COMPANY,
510 Marquette Bldg., Chicago.

GOOD BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors.
By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$5.00.**
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D.
This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth, **$1.25.**
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

Sent Prepaid on Receipt of Price.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

110-Volt Lamp.

"WOOD" ENCLOSED DIRECT CURRENT ARC LAMPS—FORM C

Embody modern ideas in design, practical skill in construction and the best of materials. The latest product in this line is

MULTIPLE TYPE

which is designed to operate on 110-volt incandescent circuits for interior service. An illustrated description contained in

BULLETIN 1029

gives most of the details of construction and special features of design. It's interesting reading. A postal to the nearest office will bring it to you.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator.—CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion.—CHAPTER XXIII: Electric Motors; General Principles the same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers, Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

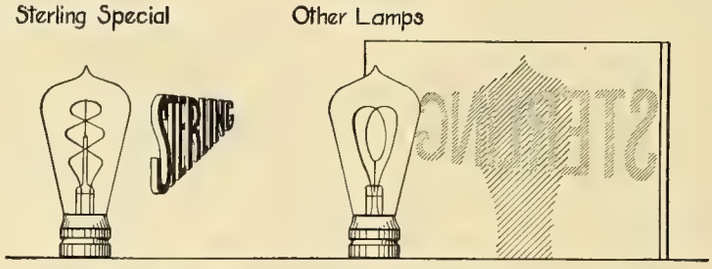
MANUFACTURED BY

G. E. Co.

CHICAGO EDISON COMPANY, 139 Adams Street. CHICAGO.

STERLING PRIZE PUZZLE.

? WHAT IS IT ?



WHY IS IT ? ?

It is a lamp that gives an equal distribution of light, or, full rated candle power in all directions.

"THE STERLING SPECIAL."

Write for Booklet, Prices and Samples,

Study the above cut and explain

WHY such conditions as shown exist, then fill in the attached application and mail to our factory. We will ship you a lamp in accordance with your requirements whereby we will prove the truth of the above illustrated claim.

REMEMBER

It takes ***8 regular type*** 16 c. p. lamps to give ***96 c. p.***
It takes ***6 Sterling Special*** 16 c. p. lamps to give ***96 c. p.***
The saving demonstrated is 2 lamps 16 c. p. ***at 56 watts*** per lamp equaling ***112 watts.***

Application for sample of STERLING SPECIAL Lamp.

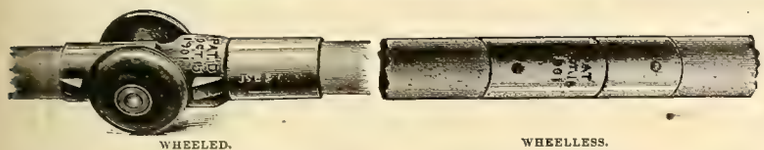
There are no Carbons better than the "Electra" and none "just as good."



WHEELED. WHEELLESS.

Villard Automatic Wheeled and Wheelless Conduit Rods

Are Coupled and Uncoupled Instantly and with Ease.

Furnished with and without wheels, as desired. They will not buckle or form a zig-zag line, and, with wheels, friction is removed, making them very light running. They are perfectly rigid when pushed, and become flexible when pulled. The rods cannot become uncoupled by any means in the ducts. The rear end of the rod has to be raised to an angle of about 45 degrees to uncouple it. One man can push with ease 600 feet, and a hard blow can be struck with telling effect without the slightest injury to the rods. The wheels serve as duct cleaners as well as to remove friction. The castings are of bronze with wheels of chilled cast iron. The rods are made of hickory, well seasoned in oil to prevent decay. Prices and circulars on application.

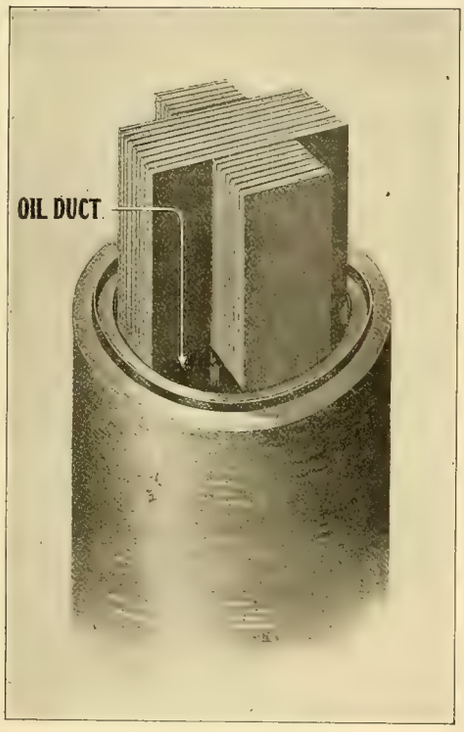
Western Electric Company,
Chicago. Saint Louis. Philadelphia. New York.

GENERAL ELECTRIC COMPANY'S

TYPE "H" TRANSFORMERS

CORE TYPE.



In larger sizes of Type H Transformers, where it would not be economical to limit the thickness of coils to one and one-half inches, ducts for the circulation of cooling oil are provided between the windings and the iron core.

Unequal expansion of transformer windings, which always causes weakening of the mechanical and electrical strength of the insulation, can be avoided only when temperatures throughout the windings are maintained perfectly uniform.

It is evident that this uniform heating can exist only when all parts of the winding are at a uniformly short distance from the cooling oil.

Type H Transformers--even of the largest size--never have any part of the copper more than one and one-half inches from the cooling oil. Therefore TEMPERATURES AND EXPANSIONS ARE UNIFORM in all parts--a result even more desirable than low average temperature.

PRINCIPAL OFFICE, SCHENECTADY, N. Y.

New York Office, 44 Broad Street. Sales Offices in All Large Cities.

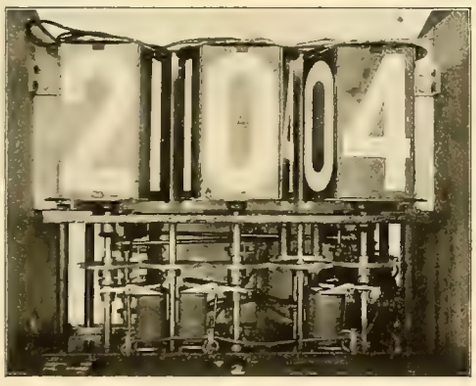
THE ELECTRIC CARRIAGE-CALL ANNUNCIATOR

Will Prove a Good Seller This Winter.

CALL COMPLETE FOR SERVICE.

It is designed to overcome the annoyance and delay which follows the old style plan of "calling" carriages after shopping, the theatre, opera or reception.

It is an absolutely perfect device. It can be depended upon always to work. It is most simple in operation.



INTERIOR VIEW OF CALL.

One illustration shows the annunciator in perspective, while the other shows the arrangement of gears and magnetic clutches.

They are giving satisfaction where now in use, and are easily installed.

Correspondence invited.

144th Street and Fourth Ave., - - NEW YORK.

Promoted to Chief Electrician

I had been employed but about six months when I realized that I must learn more or else always be a back number. I accordingly enrolled in the I. C. S. After seven months' study my promotion began. I gradually rose until today I am chief electrician of the smelting plants of this city. My salary has increased proportionally. I attribute my success entirely to the thorough methods employed by the Schools.

E. J. KINGSLEY, 608 Summit St., Pueblo, Colo.

We have hundreds of endorsements just as strong and convincing as the foregoing. You owe it to yourself to find out just what we can do for *you*. Our advice has put many a man on the road to progress and prosperity. You should ask it at once.

New Dynamo Tenders' Hand-Book.

By F. B. BADT.

226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

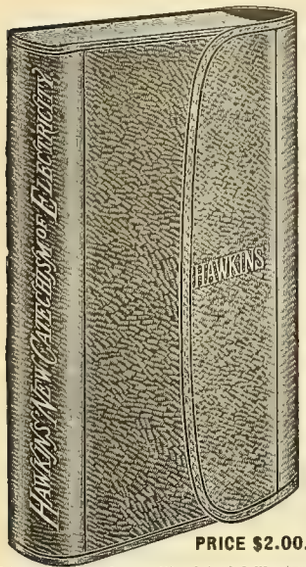
This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 10,000 of the new.

Electrician Publishing Co.,

510 Marquette Building, CHICAGO.

HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

Worth Having!

STEVENS' MECHANICAL CATECHISM

PRACTICAL KNOWLEDGE

FOR

Stationary and Marine Engineers, Firemen, Electricians, Motormen, Ice Machine Men and Mechanics in General.

New and Original. All Modern Machinery fully described and explained. Technical Points made Clear by Word and Drawing. Questions and Answers for Civil Service Examinations, etc.

SUBJECTS TREATED:

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated. Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VHI: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wail Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

Orders for above book, or any electrical work published promptly sent on receipt of price, postage prepaid.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

RELIABILITY

is without doubt the all important consideration in telephones for INTERURBAN RAILWAYS. That

KELLOGG TELEPHONES

can be depended upon to do their work is proved daily in the largest exchanges in the United States.

Kellogg Apparatus is cheaper than ordinary apparatus when the cost of maintenance is considered.

Street railway men attending the American Street Railway Convention held in Detroit, October 8, 9 and 10 are cordially invited to visit our exhibit in the Light Guard Armory where highest grade telephone apparatus may be seen in operation.

No equipment too small or too large to receive our most careful attention.

KELLOGG SWITCHBOARD & SUPPLY CO.,

229 So. Green St., CHICAGO.

FIBRE-GRAPHITE COMMUTATOR BRUSH — SELF-LUBRICATING — NOISELESS

There's No Friction

with the Fibre-Graphite Commutator Brush. Being 90 per cent. pure graphite, it insures low resistance, no sparking under a varying load, and longer wear. There is no greasing required. The Fibre-Graphite is therefore the most economic brush on the market. Send for price list.

HOLMES FIBRE-GRAPHITE MFG. CO.
5155 Wakefield St., Germantown, PHILADELPHIA.

The Best of Everything

THE NORTH-WESTERN LINE

THE through train service of the Chicago & North-Western Railway from Chicago to Omaha, Denver and the Pacific Coast on the west, the Black Hills and Dakotas to the northwest and to Milwaukee, Madison, St. Paul, Minneapolis and Duluth on the north, is as nearly perfect as modern and skillful management can make it.

The Overland Limited, a magnificent electric-lighted train, less than three days Chicago to San Francisco, daily.

The Colorado Special, only two nights to Denver from the Atlantic seaboard. Solid train Chicago to Denver.

The North-Western Limited, an electric lighted daily train between Chicago, St. Paul and Minneapolis.

ANNOUNCEMENT

"THE STERRETT" OIL PUMP
IS NOW READY FOR THE MARKET.

In making this announcement we believe that we are calling the attention of the entire engineering field, and all places where oils of any degree are handled and transferred from barrel to tank and for general use, to an article that every engineer has long looked for and regularly called upon his oil dealer to supply, particularly so when cold weather has made the handling of his valve oils difficult and almost impossible with the pumps heretofore at his command.

"THE STERRETT"

pump is guaranteed to pump any article that is in a liquid form, and handles heavy valve oils as easily as ordinary pumps will kerosene. It is made of seamless brass tubing and durable in every part. There is no leakage of oil, which makes it the cleanest pump to use ever placed on the market.

Ask your dealer for it or send direct to us. Money refunded if not satisfactory after 30 days' trial. Descriptive circulars on request. PRICE, $3.50.

Manufactured by

STERRETT PUMP COMPANY,

NO. 69 EAST SIXTH ST., ST. PAUL, MINN.

GOOD REASONS FOR USING THE

PEERLESS AUTOMATIC SMOKELESS STOKER

1. It saves fuel. Absolute elimination of smoke.
2. Increases boiler power and efficiency.
3. Burns successfully all kinds of fuel, also factory refuse.
4. Increases the draft, regardless of size or height of chimney.
5. Leaves the flues or tubes free from soot.
6. Simple in construction, repairs being reduced to minimum.
7. High temperature attained in furnaces.
8. Smoke, soot and cinder nuisances abated.
9. Renders blower fans useless, burning gasses formerly forced off unconsumed.

Subject to 30 Days' Trial. **Send for Catalogue.**

A Prosperous State.

The whole great empire of California is rapidly developing. It was long said of this sunny and attractive region that "man cannot live upon climate," but when it was seen that Southern California had something more substantial than sunshine to offer, cities rose like exhalations, and deserts became fruitful fields. The same discovery is being made in Northern and Central California. The climate is seen to be a unit throughout the state, and industrial opportunities are seen to go with the climate, and business advantages with the winterless skies.

San Francisco's trade has nearly doubled in the past few years, and her foreign tonnage since 1895 has been multiplied by fifteen. Banks and savings banks show an enormous increase in commercial deposits and in the savings of the people, while a glance at the records of the building trades shows everywhere immense activity. There are no indications of a local or temporary boom. The growth of irrigation and the multiplication of farms; the discovery of oil and its widening use as fuel in mines and manufactories, and on engines and steamers; the enlarging markets for California products in China, Japan, Hawaii and the Philippines, and the increasing trade with the west coast of Central and South America and with Australia, is sufficient to show that the prosperity of the state has a natural and healthful root.

Settlers' rates, based upon a $33 fare from Chicago, during September and October, are bringing in a host of home-seekers. This is a daily rate, and particulars may be had at any agency of the Southern Pacific. With the best climate, from the fewest acres, with the least labor, California will yield a wider range of harvest, and pay larger profits, and more dividends in comfort, than any land in the world.

The

Westinghouse Wattmeter

Westinghouse Integrating Wattmeter.

has a fine jewel movement, frictionless counting train, and a moving element very much lighter than that of any other meter. The result is a high-grade instrument of precision, which *accurately records the lightest of loads*, independent of power factor, frequency, temperature, wave form, etc.

JUST ISSUED.

MODERN ELECTRIC RAILWAY MOTORS.

BY GEO. T. HANCHETT, M. E.

FIRST PRACTICAL WORK ON RAILWAY MOTORS.

CONTENTS.—Chapter I.—Forms of Field Magnets. II.—Armature Winding Diagrams. III.—Field Coil Construction and Arrangement. IV.—Armature Construction. V.—Commutator and Brush Holder Construction. VI.—Motor Casings. VII.—Motor Suspensions. VIII.—Bearings and Gears. IX.—Lubrication. X.—General Dimensions and Data. XI.—Management and Repair. XII.—Railway Motor Design.

200 Pages. 157 Illustrations and Table. Price $2.00.

THIS is a book unique in its treatment of electric railway equipment. The first ten chapters are devoted to minute description of the details of electric railway motors that are in use to-day. Each organ of an electric railway motor is taken up in turn, described and illustrated by examples of present and past practice, and its operation explained in the light of practical experience. In short, the review of current practice is of such a nature as to bring out the reason why the electric railway motor is built as it is to-day. For example, field magnets of different types of motors are illustrated and compared, and their features of merit and faults pointed out. Armatures, armature windings, brush holders, suspensions and other details are similarly treated, each detail, however minute, being exhaustively considered. The last two chapters are devoted, one to the management and repair of electric railway motors, and the other to railway motor design, a complete design being worked out as an example. A table gives authoritative data of all types of railway motors in common use, both in America and Europe. **Sent postpaid on receipt of price.**

ELECTRICIAN PUBLISHING CO, 510 MARQUETTE BLDG., CHICAGO.

—THE—

MOTORMAN'S GUIDE,

A PRACTICAL TREATISE

—ON—

Street Railway Motors;

—OR—

How to Become a Practical Motorman.

By J. W. GAYETTY.

Price, = = = = = = 50c.

CONTENTS.

1. Introduction. 2. Car wiring. 3. How to locate trouble in your car while on the road. 4. How to cut out a motor. 5. Information on "K" controllers. 6. How to locate trouble in a reversing switch and how to overcome it. 7. How to reverse a car in order to obtain best effects. 8. Points about motors that should be looked after closely. 9. Short circuits. What a short circuit means and how to locate it. 10. Information on incandescent light circuits. 11. Electric motor force, or how armature rotation is obtained. 12. How to increase the speed of a motor by changing two connections. 13. General information on Westinghouse motors. 14. Westinghouse fuse block. 15. Westinghouse lightning arresters. 16. Westinghouse lamp circuit. 17. Information on open circuits and sparking brushes. 18. Some questions you may be called upon to answer. 19. Points of interest to all. 20. Conclusion. 21. Diagram of car.

EXTRACT FROM INTRODUCTION.

"Recognizing the fact that not one motorman in twenty thoroughly understands his motors, I feel that I am giving them great value for their money, and at the same time furnishing them with the means of holding a position on any line they may be employed on. While serving as foreman in different car houses, the author has been able to gain a great many pointers that will come up on the examination of motormen and conductors, and having possessed these, together with my knowledge of electricity, I feel perfectly safe in stating that they cannot ask you any question that I have not honestly and correctly answered in this little book. If you wish to learn the value of this book, go to your electrician, or man in charge of your motors, and ask him for information, and then, and not until then, will you learn the true value of this book. It has always been understood by all electricians or foremen of car houses, that no information of any importance be given to any one outside of their class, and consequently most men running cars to-day are ignorant of their motors."

"WOOD" ARC LAMPS

FOR POWER CIRCUITS

500 VOLTS

For street railway circuits in summer parks these lamps are exceptionally well adapted. They are perfectly designed and constructed and operate

FIVE IN SERIES

on circuits of 500 to 575 volts. With a few changes they may be adapted to direct current series circuits for city lighting.

BULLETIN 1028

completely describes these lamps with illustrations of many features of design and construction. A postal brings it.

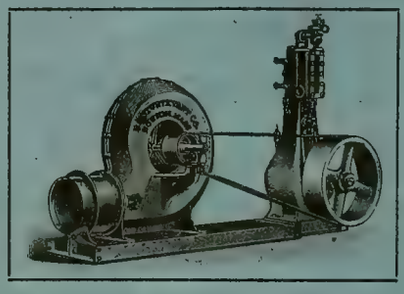
STURTEVANT
BLOWERS
ARE BUILT IN ENDLESS VARIETY



HIGH PRESSURE BLOWERS FOR

Cupola Furnaces and Forges are capable of producing pressures up to 16 ounces per square inch. The shells are of cast iron, the shafts of high-grade steel, carefully finished, and the wheels of thin galvanized steel mounted on extra strong arms and accurately balanced. The great length and special oiling features of the journal boxes render them practically non-heatable. They can be arranged on adjustable beds so that belts can be tightened while running.

DRY CELL.

If kept out of the sun, in a cool dry place, this cell will not run down on the shelf in two years, and at the end of that time will be as good as other makes fresh from the factory. To maintain its superiority to all others, no expense is spared and only the best materials and chemicals are used in its manufacture.

This cell will save the consumer money, because a fewer number will perform a given amount of work four times as long as any other cell of equal size.

DAM!

That is what every user of water-power wants and very few have. Most dams leak. "The Gravity Dam" is the name of a 78-page book on dam construction. It describes all kinds of dams that leak and break and tells why they leak and break. It also describes a dam that will neither leak, break nor wash out.

THIS BOOK SENT FREE OF CHARGE

To every present or prospective user of water-power who sends his address and five cents in stamps to pay postage.

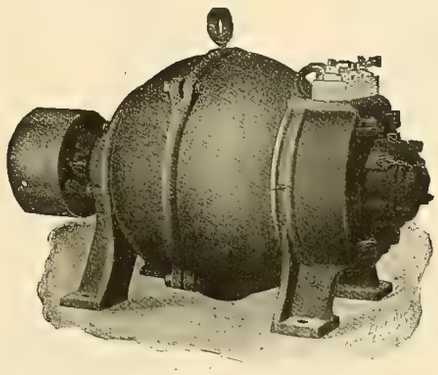
DIRECT CURRENT ELECTRIC

MOTORS



THE SPRAGUE ELECTRIC COMPANY

for many years has been closely identified with the principal achievements in the design and construction of direct-current electric motors, and is recognized as an authority upon the installation of power plants. Long experience in this class of work has resulted in the accumulation of a vast amount of valuable data, thus enabling the Sprague Company to produce the very best possible results to the customer. The Sprague Electric Company's motors are unequaled for efficiency and durability. Write for bulletins Nos. 03206 and 03207.

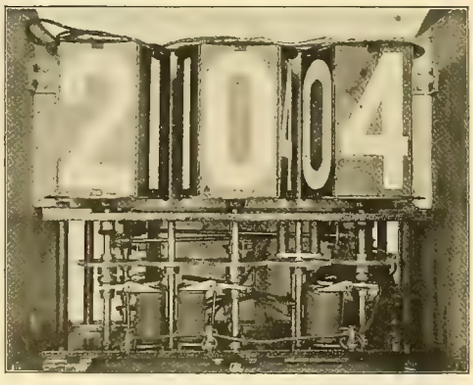
THE ELECTRIC CARRIAGE-CALL ANNUNCIATOR

Will Prove a Good Seller This Winter.

CALL COMPLETE FOR SERVICE.

It is designed to overcome the annoyance and delay which follows the old style plan of "calling" carriages after shopping, the theatre, opera or reception.

It is an absolutely perfect device. It can be depended upon always to work. It is most simple in operation.



INTERIOR VIEW OF CALL.

One illustration shows the annunciator in perspective, while the other shows the arrangement of gears and magnetic clutches.

They are giving satisfaction where now in use, and are easily installed.

THE

MOTORMAN'S GUIDE,

A PRACTICAL TREATISE

—ON—

Street Railway Motors;

—OR—

How to Become a Practical Motorman.

By J. W. GAYETTY.

Price, - - - - - - 50c.

CONTENTS.

1. Introduction. 2. Car wiring. 3. How to locate trouble in your car while on the road. 4. How to cut out a motor. 5. Information on "K" controllers. 6. How to locate trouble in a reversing switch and how to overcome it. 7. How to reverse a car in order to obtain best effects. 8. Points about motors that should be looked after closely. 9. Short circuits. What a short circuit means and how to locate it. 10. Information on incandescent light circuits. 11. Electric motor force, or how armature rotation is obtained. 12. How to increase the speed of a motor by changing two connections. 13. General information on Westinghouse motors. 14. Westinghouse fuse block. 15. Westinghouse lightning arresters. 16. Westinghouse lamp circuit. 17. Information on open circuits and sparking brushes. 18. Some questions you may be called upon to answer. 19. Points of interest to all. 20. Conclusion. 21. Diagram of car.

EXTRACT FROM INTRODUCTION.

"Recognizing the fact that not one motorman in twenty thoroughly understands his motors, I feel that I am giving them great value for their money, and at the same time furnishing them with the means of holding a position on any line they may be employed on. While serving as foreman in different car houses, the author has been able to gain a great many pointers that will come upon the examination of motormen and conductors, and having possessed these, together with my knowledge of electricity, I feel perfectly safe in stating that they cannot ask you any question that I have not honestly and correctly answered in this little book. If you wish to learn the value of this book, go to your electrician, or man in charge of your motors, and ask him for information, and then, and not until then, will you learn the true value of this book. It has always been understood by all electricians or foremen of car houses, that no information of any importance be given to any one outside of their class, and consequently most men running cars to-day are ignorant of their motors."

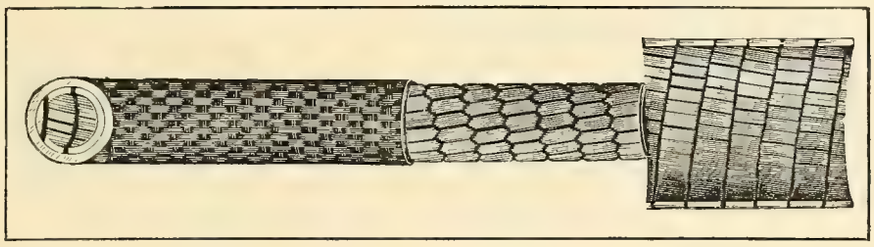
FLEXDUCT

For Interior Wiring
The Superior Product

The interior of "Flexduct" remains intact under all circumstances because it is an inseparable part of the conduit.



Here are some of the advantages of "Flexduct."

The interior cannot be ripped out, because it is an inseparable part of the conduit—no possibility of ripping out the inside when installing wires too large for the conduit or when fishing wires through it.

With part of the interior of a conduit gone, and the insulating properties seriously impaired, the installation cannot possibly meet the requirements of first-class work.

When "Flexduct" is used, every foot is absolutely intact and uninjured.

"Flexduct" is positively moisture-proof—made so by closely weaving together a special fibre with a special warp and by treating the conduit with a special compound to fill up the pores.

Send for booklet—also a sample of "Flexduct," and carefully examine its smooth interior; its longitudinal interweaving; test its strength, and satisfy yourself that "Flexduct" is the best flexible conduit that has ever been manufactured for interior wiring.

Osburn Flexible Conduit Co.,

General Sales Offices, 21 Park Row, New York City.

TRY EXPERIMENTS

In what you will, but not in your incandescent lamps. *Packard* lamps have long been beyond any experimental stage. You can depend upon them. Made to meet the actual needs—practical, satisfactory. Our constantly growing list of large and small customers is evidence of this. We need one more name—yours.

F. H. DAVIS,
La Crosse, Kansas.

FOR SALE.

An electric-light plant near Chicago. County seat town, located across line in Indiana. Plant on good paying basis, good city contract. Gross receipts last year $6,500. Price $10,000 cash. Owner's reason for selling, sickness. Full statement of plant given upon application. Address J. G. POMEROY, 309 Dearborn St., Chicago.

FOR SALE.

One hundred tons soft sheet steel for small armatures, at a bargain. WALSH'S SONS & CO., 261 Washington St., Newark, N. J.

FOR SALE.

Electric Light and Steam Heating Plant in thriving town of 2,500 people; 10-year contract with city at $1,900 per year, with nine years to run. One hundred patrons with 1,900 incandescent lights; five 1,200 C. P. arc and 89,32 C. P. incandescents on streets, 90,000 feet of wire on streets, 415 poles, 75 meters, 45 transformers. Plant is modern and new, two dynamos, two engines, two boilers and as complete as can be made in new isolated building. Has steam vacuum heating system using exhaust steam, 13 patrons, including hotel, and using less than one-quarter of the exhaust steam, and balance of business district anxious for extension of system to their places. All light patrons on meter basis, 15 cents per 1,000 watts. Will sell on easy terms. Further information cheerfully given by calling upon or addressing STEWARD BROTHERS, Plano, Ill.

NOTICE.

Sealed proposals will be received until November, 15, 1902, for the furnishing of one hundred arc lights to light the city of Baton Rouge. Specifications can be obtained by addressing EDWARD WAX, Secretary of the Water and Lighting Committee, Baton Rouge, La.

NOTICE.

Bids are invited until Oct. 20, on which date they will be opened at 501 Jackson Ave., Topeka, Kan., for furnishing material for the Council Grove Electric Light & Power Co. Specifications will be supplied on application. JOHN H. PACKER, Secy. and Gen. Mgr., Perry, Kan.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., September 29, 1902. Sealed proposals will be received at this office until 2 o'clock P. M., on the 4th day of November, 1902, and then opened for a conduit and electric wiring system for the U. S. Public Building at Cheyenne, Wyo., in accordance with drawings and specifications, copies of which may be obtained at this office, or at the office of the Superintendent of Construction, at Cheyenne, Wyo., at the discretion of the Supervising Architect, JAMES KNOX TAYLOR, Supervising Architect.

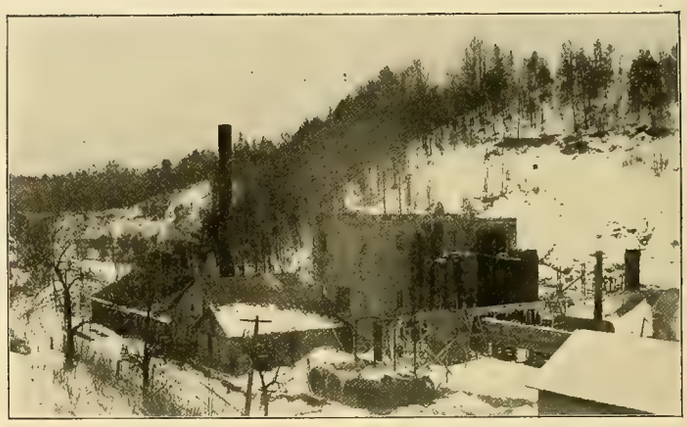
THE TAYLOR CHEMICAL CO.

PENN YAN, N. Y.

Capital Stock, - $500,000. Par Value, - -$10.00 Per Share.

Officers: Edward R. Taylor, Penn Yan, N. Y. Edward J. Hutchinson, Cincinnati, O., V.-Pres. C. A. Taylor, Penn Yan, N. Y., Sec. and Treas.



More than three million pounds of goods made by a new electrical process. Fully demonstrated and a complete success. Manufacture of many chemicals placed on an entirely new basis. Fully protected by patents. See Electrical World and Engineer of Dec. 21, 1901, page 1028; Electrical Review of Feb. 1st, 1902, pages 143-4-5, and Harpers Weekly, May 17, page 641. The U. S. Census Bulletin, No. 210, June 25th, page 58, says: "One of the most ingenious as also one of the most recent chemical applications of electricity." Good chance to get in on the ground floor of an industry that is sure to have a large future. Long established business. Present rate of production insures an 8 per cent. dividend from the start. Limited amount of stock for sale. For particulars apply to

EDWARD R. TAYLOR, Penn Yan, N. Y.

ELECTRICITY MADE SIMPLE.

233 Pages. 108 Illustrations. **By CLARK CARYL HASKINS.** Cloth $1.00. Paper .50.

A BOOK DEVOID OF TECHNICALITIES—SIMPLE, PLAIN AND UNDERSTANDABLE.

There are many elementary books about electricity upon the market, but this is the first one presenting the matter in such shape that the layman may understand it, and, at the same time, not written in a childish manner.

This little work is not intended for the instruction of experts, nor as a guide for professors. The author has endeavored to bring the matter down to the level of those whose opportunities for gaining information on the branches treated have been limited.

Four chapters are devoted to Static Electricity; three each to Chemical Batteries and Light and Power; two each to Terrestrial Magnetism and Electro-Magnetism; one each to Atmospheric Electricity; Lightning Rods; Electro-Chemistry; Applied Electro-Magnetism; Force, Work and Energy; Practical Application of Ohm's Law; also a chapter upon Methods of Developing Electricity, other than Chemical.

The large number of examples that are given to illustrate the practical application of elementary principles is gaining for it a reputation as a text book for schools and colleges.

FOR ENGINEERS, DYNAMO MEN, FIREMEN, LINEMEN, WIREMEN AND LEARNERS. FOR STUDY OR REFERENCE.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

JUST ISSUED.

MODERN ELECTRIC RAILWAY MOTORS.

BY GEO. T. HANCHETT, M. E.

FIRST PRACTICAL WORK ON RAILWAY MOTORS.

CONTENTS.—Chapter I.—Forms of Field Magnets. II.—Armature Winding Diagrams. III.—Field Coil Construction and Arrangement. IV.—Armature Construction. V.—Commutator and Brush Holder Construction. VI.—Motor Casings. VII.—Motor Suspensions. VIII.—Bearings and Gears. IX.—Lubrication. X.—General Dimensions and Data. XI.—Management and Repair. XII.—Railway Motor Design.

200 Pages. 157 Illustrations and Table. Price $2.00.

THIS is a book unique in its treatment of electric railway equipment. The first ten chapters are devoted to minute description of the details of electric railway motors that are in use to-day. Each organ of an electric railway motor is taken up in turn, described and illustrated by examples of present and past practice, and its operation explained in the light of practical experience. In short, the review of current practice is of such a nature as to bring out the reason why the electric railway motor is built as it is to-day. For example, field magnets of different types of motors are illustrated and compared, and their features of merit and faults pointed out. Armatures, armature windings, brush holders, suspensions and other details are similarly treated, each detail, however minute, being exhaustively considered. The last two chapters are devoted, one to the management and repair of electric railway motors, and the other to railway motor design, a complete design being worked out as an example. A table gives authoritative data of all types of railway motors in common use, both in America and Europe. **Sent postpaid on receipt of price.**

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

GOOD BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**

The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$5.00.**

The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth, **$1.25.**

A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.

This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.

The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.

The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents.

The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

Sent Prepaid on Receipt of Price.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

INCANDESCENT LAMPS.

WE have some bargains in Lamps.

No job lot, but a thoroughly high grade lamp that we are prepared to guarantee fully. We can make prices that will interest you. As you know, we are not in the habit of making rash statements. So write us to-day if you are in the market.

Western Electrical Supply Co.

ST. LOUIS, U. S A.

IF

There is any place on earth where a good telephone is needed it's in railroad work.

MORAL: Buy

KELLOGG

They have stood the test of the largest exchanges in the U. S.

With a private telephone system connecting your offices, car barn, repair shop, and a telephone at your right hand, you have every employe at your command. The value of this cannot be over-estimated.

In the past year over 72,380 Kellogg transmitters were put on the market, and out of that number only one purchaser expressed his dissatisfaction and asked for his money back. This speaks for the reliability of Kellogg apparatus.

No system too small for our careful consideration.

Lowest prices consistent with high qualities.

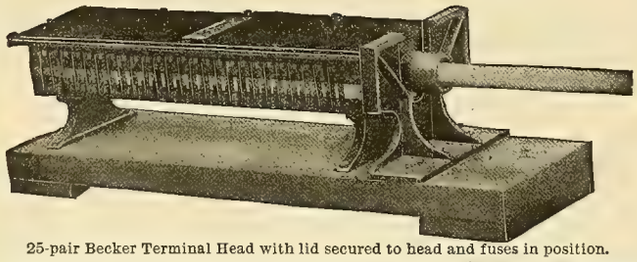
It might pay you to get our prices on CEDAR POLES. We are in a position to make prompt shipments and our prices are as low as the lowest, quality considered.

Kellogg Switchboard & Supply Co.

229 So. Green St., CHICAGO, Ill.

PROTECTION

THE BECKER TERMINAL HEAD.

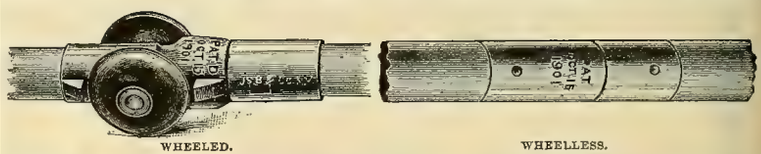


25-pair Becker Terminal Head with lid secured to head and fuses in position.

A practical, absolute protection against lightning, sneak currents or high potential currents from any source. No expense has been spared to make this Terminal Head the best on the market. We can supply anything in the telephone line. Prices reasonable.

CENTRAL TELEPHONE AND ELECTRIC CO., 909 Market Street, ST. LOUIS.

Chicago Office: 59 W. Jackson Boul. | Post-Glover Electric Co., Cincinnati Agents. | W. G. Nagel Electric Co., Toledo (O.) Agents.



WHEELED. WHEELESS.

Villard Automatic Wheeled and Wheelless Conduit Rods

Are Coupled and Uncoupled Instantly and with Ease.

Furnished with and without wheels, as desired. They will not buckle or form a zig-zag line, and, with wheels, friction is removed, making them very light running. They are perfectly rigid when pushed, and become flexible when pulled. The rods cannot become uncoupled by any means in the ducts. The rear end of the rod has to be raised to an angle of about 45 degrees to uncouple it. One man can push with ease 600 feet, and a hard blow can be struck with telling effect without the slightest injury to the rods. The wheels serve as duct cleaners as well as to remove friction. The castings are of bronze with wheels of chilled cast iron. The rods are made of hickory, well seasoned in oil to prevent decay. Prices and circulars on application.

ANNOUNCEMENT

"THE STERRETT" OIL PUMP
IS NOW READY FOR THE MARKET.

In making this announcement we believe that we are calling the attention of the entire engineering field, and all places where oils of any degree are handled and transferred from barrel to tank and for general use, to an article that every engineer has long looked for and regularly called upon his oil dealer to supply, particularly so when cold weather has made the handling of his valve oils difficult and almost impossible with the pumps heretofore at his command.

"THE STERRETT"

pump is guaranteed to pump any article that is in a liquid form, and handles heavy valve oils as easily as ordinary pumps will kerosene. It is made of seamless brass tubing and durable in every part. There is no leakage of oil, which makes it the cleanest pump to use ever placed on the market.

Ask your dealer for it or send direct to us. Money refunded if not satisfactory after 30 days' trial. Descriptive circulars on request. **PRICE, $3.50.**

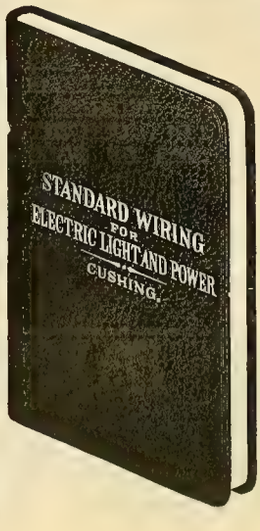
"The Recognized Authority on Wiring and Construction."



The universally adopted National Electrical Code explained and illustrated in this year's edition of the hand-book.

STANDARD WIRING

For Electric Light and Power.

By H. C. CUSHING, Jr., A. I. E. E., Electrical Engineer and Inspector.

ADOPTED

By the Fire Underwriters of the United States.
By Cornell University, Stanford University and other Technical Colleges and Schools.
By over 27,000 Electrical Engineers, Central Station Managers and Wiremen.

BECAUSE

It is the only book on Wiring and Construction kept strictly up to date.
It contains all the necessary Tables, Rules, Formulas and Illustrations.
It settles disputes, and if referred to before wiring will prevent disputes.

Flexible Leather Cover (pocket size), $1.00.

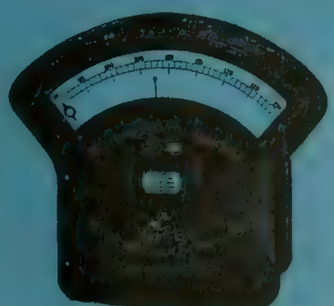
Illuminated Dial Station Instruments.
These instruments are based upon the same general principle and are just as accurate as our regular Standard Portable Direct Current Voltmeters and Ammeters, but are much larger, and the working parts are inclosed in a neatly designed dust-proof cast-iron case which effectively shields the instruments from disturbing influences of external magnetic fields.
BERLIN.—European Weston Electrical Instrument Co., Ritterstrasse No. 58.



Weston Standard Illuminated Dial Potential Indicator, Style B. "Flush Type."

Weston Standard
Portable Direct Reading Voltmeters and Millivoltmeters. Ammeters and Milammeters, Wattmeters and Voltmeters, for Alternating and Direct Current Circuits.
Our portable instruments are recognized as standards throughout the civilized world.
Our Semi-Portable Laboratory Standard Voltmeters and Ammeters are still better.
They are the most reliable, absolute standards for Laboratory use.

D. & W. CARTRIDGE FUSES

BEFORE BLOWING.

AFTER BLOWING.

HAVE INDICATING BULL'S EYE.

This indicator far surpasses any upon the market, as there is no wire upon the outside to cause a flash in blowing or to become broken in handling. Before blowing, the circle upon the label is clear, as you see in the accompanying cut, but when the fuse blows, the center of the circle becomes black.

FIBRE-GRAPHITE COMMUTATOR BRUSH
SELF-LUBRICATING NOISELESS

There's No Friction

with the Fibre-Graphite Commutator Brush. Being 90 per cent. pure graphite, it insures low resistance, no sparking under a varying load, and longer wear. There is no greasing required. The Fibre-Graphite is therefore the most economic brush on the market. Send for price list.

Carbons of all kinds and for all purposes.

The Electro-Magnet

—BY—

TOWNSEND WOLCOTT, A. E. KENNELLY, RICHARD VARLEY.

PRICE, ONE DOLLAR,

CONTENTS.

General Properties. Magnetic Field of Force. Magnetic Units. Induced Magnet, Reluctance, Permeability. Discovery of Electro-Magnetism. Iron Ring in the Magnetic Field. Calculation of Magnet Windings. Magnetic Circuit. Given Ampere-Turns to Find Proper Current. Relation of Ampere-Turns to Wire Space. Room Occupied by Insulation, Heating and Other Limiting Conditions. Winding a Magnet for a Given Voltage. Hysteresis, Self-Induction. Alternating Currents. Traction.

On the Relative Values of the Windings of Electro-Magnetic Coils. Properties of Fixed Winding Spaces and a Fixed Size of Wire. Properties of Fixed Winding Space and Variable Size of Wire. Fixed Winding Space and Fixed Length of Wire or Number of Turns. Constant Internal Dimensions, but External Diameter of Coil Variable. Fixed Internal Radius and Interflange-Fixed Number of Turns of Same Size of Wire.

The Importance of Details. Actual Calculations. Working Formulæ. Diameter of Wire to Carry Given Current. Diameter of Wire to Have Given Resistance. Thickness of Insulation in a Given Coil. Weight of Copper in a Given Coil. Table of Constants for Insulated Wire. Standard Table of Resistances of Insulated Wires. Table Showing Percentage of Copper and Insulation in Cotton or Silk Covered Wire. Standard Copper Wire Table, 17 Problems (Solved) Illustrated. Cuts of 37 Magnets of Standard Dimensions, Lengths Variable. Logarithms and Anti-Logarithms. Decimal Parts of an Inch. Logarithmic Scale.

FOR SALE.

Electric Light and Steam Heating Plant in thriving town of 2,500 people; 10-year contract with city at $1,900 per year, with nine years to run. One hundred patrons with 1,900 incandescent lights; five 1,200 C. P. arc and 89,32 C. P. incandescents on streets, 90,000 feet of wire on streets, 415 poles, 75 meters, 45 transformers. Plant is modern and new, two dynamos, two engines, two boilers and as complete as can be made in new isolated building. Has steam vacuum heating system using exhaust steam, 13 patrons, including hotel, and using less than one-quarter of the exhaust steam, and balance of business district anxious for extension of system to their places. All light patrons on meter basis, 15 cents per 1,000 watts. Will sell on easy terms. Further information cheerfully given by calling upon or addressing STEWARD BROTHERS, Plano, Ill.

FOR SALE.

We have for sale at very reasonable prices the following machinery, which has become too small for our business, but is in first-class working condition:

One 60 K. W. Westinghouse Alternator complete with instruments, Exciter and Rheostat, 1100 volts primary, 16000 alternations, speed 1650 r. p. m., self-oiling bearings.

One 45 K. W. Alternator, same as above, with Exciter, but less switchboard instruments, speed 2000 r. p. m.

One T. & H. Arc Machine, 60 lighter 9 6-10 amperes, speed 850 r. p. m., in good working condition.

About 60 Street Arc Lamps, T. & H., 9 6-10 amperes, only in fair condition.

About 60 Street Arc Lamp Hoods.

The above are now in use, but will be released within the next forty days.

PRACTICAL FEATURES OF TELEPHONE WORK.

By A. E. DOBBS.

Cloth, 7 by 5 1-4 Inches. Illustrated. 134 pages. Appendix. 75 Cents.

THIS work is designed as a simple, plain-speaking handbook for the practical telephone man. Its author, Mr. Dobbs, has been eminently fitted by fourteen years' experience in telephony to deal with the subject in a thoroughly competent manner. This he has done, and the result is a mine of information, clearly and concisely presented, and invaluable to the manager, operator and lineman alike. The appendix contains reliable data regarding wires, resistance, inductive capacity, etc.

This or any other book on telephony or electricity sent to any address, postpaid, on receipt of price.

ELECTRICIAN PUBLISHING CO.,

510 MARQUETTE BUILDING, CHICAGO.

A Prosperous State.

The whole great empire of California is rapidly developing. It was long said of this sunny and attractive region that "man cannot live upon climate," but when it was seen that Southern California had something more substantial than sunshine to offer, cities rose like exhalations, and deserts became fruitful fields. The same discovery is being made in Northern and Central California. The climate is seen to be a unit throughout the state, and industrial opportunities are seen to go with the climate, and business advantages with the winterless skies.

San Francisco's trade has nearly doubled in the past few years, and her foreign tonnage since 1895 has been multiplied by fifteen. Banks and savings banks show an enormous increase in commercial deposits and in the savings of the people, while a glance at the records of the building trades shows everywhere immense activity. There are no indications of a local or temporary boom. The growth of irrigation and the multiplication of farms; the discovery of oil and its widening use as fuel in mines and manufactories, and on engines and steamers; the enlarging market for California products in China, Japan, Hawaii and the Philippines, and the increasing trade with the west coast of Central and South America and with Australia, is sufficient to show that the prosperity of the state has a natural and healthful root.

Settlers' rates, based upon a $33 fare from Chicago, during September and October, are bringing in a host of home seekers. This is a daily rate, and particulars may be had at any agency of the Southern Pacific. With the best climate, from the fewest acres, with the least labor, California will yield a wider range of harvest, and pay larger profits, and more dividends in comfort, than any land in the world.

GOOD BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$5.00.**
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth, **$1.25.**
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

Type A Insulation

STRUCK BY LIGHTNING.

Monroeville, Ind., July 14, 1902.

Fort Wayne Electric Works,
Fort Wayne, Ind.

Gentlemen:—During the severe electrical storm at this place, lightning struck the line and entered one of your 30-light Type "A" Oil Transformers, No. 40,048. The discharge blew the fuse and burst the cast-iron cover. I did not think it possible for a transformer to be good for anything after this severe discharge, but on having same tested out carefully I find that the coils are not injured in the least.

I cannot too highly recommend your Type "A" Oil Transformers to central station men.

Very truly yours,
H. W. DORRIS, Sup't Electric Light Plant.

No diagram is needed to prove that weakened insulation caused by "unequal expansion" or "hot spots" is noticeably absent in "Wood" Type A Transformers.

ANNOUNCEMENT

"THE STERRETT" OIL PUMP
IS NOW READY FOR THE MARKET.

In making this announcement we believe that we are calling the attention of the entire engineering field, and all places where oils of any degree are handled and transferred from barrel to tank and for general use, to an article that every engineer has long looked for and regularly called upon his oil dealer to supply, particularly so when cold weather has made the handling of his valve oils difficult and almost impossible with the pumps heretofore at his command.

"THE STERRETT"

pump is guaranteed to pump any article that is in a liquid form, and handles heavy valve oils as easily as ordinary pumps will kerosene. It is made of seamless brass tubing and durable in every part. There is no leakage of oil, which makes it the cleanest pump to use ever placed on the market.

Ask your dealer for it or send direct to us. Money refunded if not satisfactory after 30 days' trial. Descriptive circulars on request. **PRICE, $3.50.**

Manufactured by

STERRETT PUMP COMPANY,
NO. 69 EAST SIXTH ST., ST. PAUL, MINN.

ARE YOU LOOKING FOR MONEY?

If so, buy WALRATH GAS OR GASOLINE ENGINES and get light on the subject.

THE WALRATH

Received the Highest Award at the Pan-American Exposition.

It will produce as good a commercial light as that of an automatic steam engine, either belted or direct connected generator. Simple, Economical and Reliable. Send for Catalogue W.

INCANDESCENT LAMPS.

WE have some bargains in Lamps.

No job lot, but a thoroughly high grade lamp that we are prepared to guarantee fully. We can make prices that will interest you. As you know, we are not in the habit of making rash statements. So write us to-day if you are in the market.

Western Electrical Supply Co.

ST. LOUIS, U. S A.

PROFITABLE TO CENTRAL STATIONS THE HYLO. IT

Teaches People To Use More Illumination—

HOW?

By Turning Lamps Down Instead of Out.

If you sell light on flat rate why don't you push the **HYLO** lamp and save current? You could afford to furnish it ***free.*** You certainly cannot afford to refuse to ***sell*** it.

If you are selling current on meter you need the **HYLO.** One baby filament may not start your meters and you may make the customer a present of nine watts now and then. But are you letting this ***one fault*** (of the meter) outshine all the advantages of the **HYLO?** A meter too slow to catch ten watts will be very likely to miss one 8 c. p. lamp or be altogether too slow if it moves at all. Therefore, it is much better to give a customer a nine-watt lamp all night, and no more, ***than to take the chance of giving him 25 or 30 watts.*** We insist that you will ***gain*** on the item of meter slip by using **HYLOs.**

Besides, we are advertising so heavily all over the world that your customers will eventually get the **HYLO** ***anyway,*** and you had better score a point and provide it for them.

DAM!

That is what every user of water-power wants and very few have. Most dams leak. "The Gravity Dam" is the name of a 78-page book on Dam construction. It describes all kinds of dams that leak and break and tells why they leak and break. It also describes a dam that will neither leak, break nor wash out.

THIS BOOK SENT FREE OF CHARGE

To every present or prospective user of water-power who sends his address and five cents in stamps to pay postage.

Dynamos and Motors.

We invite correspondence with those wishing to buy or sell.

SCHUREMAN & HAYDEN,
140 S. Clinton St., Chicago.

NOTICE IS HEREBY GIVEN, that the Common Council of the city of Superior, Wis., with a view to granting a franchise, has caused to be prepared and has by resolution adopted full specifications containing rules and regulations for the construction, maintenance and operation of a plant for the distribution of electric currents throughout said city, for the purpose of supplying said city and the inhabitants thereof with electricity for power, heat and lighting purposes, and for the conduct of such business.

Said specifications contain, among other things, the maximum rates which may be charged by the grantee of such franchise to patrons or consumers and for annual statements, sworn to by the manager and treasurer of the company operating under such franchise to be made to the Common Council of the gross receipts of the business carried on under such franchise. Said specifications are on file and of record in the office of the city clerk of said city.

Request is hereby made that proposals be submitted stating what percentage of the gross receipts from the business carried on under the franchise the bidder will pay annually into the treasury of said city in consideration of receiving a franchise according to said specifications.

Each person presenting a bid shall accompany such bid with a certified check of some national bank of the United States in the sum of one thousand dollars ($1,000), payable to the order of the treasurer of the city of Superior, Wis., as a guarantee of the acceptance of the franchise, if such bid is accepted and a franchise granted in accordance with the specifications and the laws of the state of Wisconsin, and for the giving of a bond in the sum of one thousand dollars ($1,000), as in said specifications provided.

Sealed bids will be received for a franchise to be granted according to said specifications, said bids to be opened at a meeting of the Common Council of said city, to be held November 18, 1902.

This advertisement is made pursuant to directions contained in a resolution of said Common Council passed at a meeting thereof held in the council chamber in the city of Superior, Wis., on October 14, 1902. Said resolution was approved by the mayor October 16, 1902.

Dated at Superior, Wis., this 18th day of October, 1902. JOHN A. HOBE,
Clerk of the City of Superior, Wis.

ANNOUNCEMENT

"THE STERRETT" OIL PUMP

IS NOW READY FOR THE MARKET.

In making this announcement we believe that we are calling the attention of the entire engineering field, and all places where oils of any degree are handled and transferred from barrel to tank and for general use, to an article that every engineer has long looked for and regularly called upon his oil dealer to supply, particularly so when cold weather has made the handling of his valve oils difficult and almost impossible with the pumps heretofore at his command.

"THE STERRETT"

pump is guaranteed to pump any article that is in a liquid form, and handles heavy valve oils as easily as ordinary pumps will kerosene. It is made of seamless brass tubing and durable in every part. There is no leakage of oil, which makes it the cleanest pump to use ever placed on the market.

Ask your dealer for it or send direct to us. Money refunded if not satisfactory after 30 days' trial. Descriptive circulars on request. **PRICE, $3.50.**

XXXIV.—Automatic Exchanges. XXXV.—Storage Batteries. XXXVI.—Specifications.

518 large octavo pages, 379 Illus. Price, $3.00.

This is the first complete treatise on Telephony in the English language. The author was peculiarly qualified for the task, having been an examiner in the U. S. Patent Office in the telephonic class, and subsequently as a telephone engineer had a wide experience in every branch of telephonic work. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

Copies of this or any other electrical book published sent prepaid, to any address in the world, on receipt of price.

Electrician Publishing Co., *510 Marquette Building, CHICAGO, ILLINOIS.*

The Electro-Magnet

BY

TOWNSEND WOLCOTT, A. E. KENNELLY, RICHARD VARLEY.

PRICE, ONE DOLLAR,

CONTENTS.

General Properties. Magnetic Field of Force. Magnetic Units. Induced Magnet, Reluctance, Permeability. Discovery of Electro-Magnetism. Iron Ring in the Magnetic Field. Calculation of Magnet Windings. Magnetic Circuit. Given Ampere-Turns to Find Proper Current. Relation of Ampere-Turns to Wire Space. Room Occupied by Insulation, Heating and Other Limiting Conditions. Winding a Magnet for a Given Voltage. Hysteresis, Self-Induction. Alternating Currents. Traction.

On the Relative Values of the Windings of Electro-Magnetic Coils. Properties of Fixed Winding Spaces and a Fixed Size of Wire. Properties of Fixed Winding Space and Variable Size of Wire. Fixed Winding Space and Fixed Length of Wire or Number of Turns. Constant Internal Dimensions, but External Diameter of Coil Variable. Fixed Internal Radius and Interflange-Fixed Number of Turns of Same Size of Wire.

The Importance of Details. Actual Calculations. Working Formulæ. Diameter of Wire to Carry Given Current. Diameter of Wire to Have Given Resistance. Thickness of Insulation in a Given Coil. Weight of Copper in a Given Coil. Table of Constants for Insulated Wire. Standard Table of Resistances of Insulated Wires. Table Showing Percentage of Copper and Insulation in Cotton or Silk Covered Wire. Standard Copper Wire Table. 17 Problems (Solved) Illustrated. Cuts of 37 Magnets of Standard Dimensions, Lengths Variable. Logarithms and Anti-Logarithms. Decimal Parts of an Inch. Logarithmic Scale.

PRACTICAL FEATURES OF TELEPHONE WORK.

By A. E. DOBBS.

Cloth, 7 by 5 1-4 Inches. Illustrated. 134 pages. Appendix. 75 Cents.

THIS work is designed as a simple, plain-speaking handbook for the practical telephone man. Its author, Mr. Dobbs, has been eminently fitted by fourteen years' experience in telephony to deal with the subject in a thoroughly competent manner. This he has done, and the result is a mine of information, clearly and concisely presented, and invaluable to the manager, operator and lineman alike. The appendix contains reliable data regarding wires, resistance, inductive capacity, etc.

This or any other book on telephony or electricity sent to any address, postpaid, on receipt of price.

ELECTRICITY MADE SIMPLE.

233 Pages. 108 Illustrations. **By CLARK CARYL HASKINS.** Cloth $1.00. Paper .50.

A BOOK DEVOID OF TECHNICALITIES—SIMPLE, PLAIN AND UNDERSTANDABLE.

There are many elementary books about electricity upon the market, but this is the first one presenting the matter in such shape that the layman may understand it, and, at the same time, not written in a childish manner.

This little work is not intended for the instruction of experts, nor as a guide for professors. The author has endeavored to bring the matter down to the level of those whose opportunities for gaining information on the branches treated have been limited.

Four chapters are devoted to Static Electricity; three each to Chemical Batteries and Light and Power; two each to Terrestrial Magnetism and Electro-Magnetism; one each to Atmospheric Electricity; Lightning Rods; Electro-Chemistry; Applied Electro-Magnetism; Force, Work and Energy; Practical Application of Ohm's Law; also a chapter upon Methods of Developing Electricity, other than Chemical.

The large number of examples that are given to illustrate the practical application of elementary principles is gaining for it a reputation as a text-book for schools and colleges.

FOR ENGINEERS, DYNAMO MEN, FIREMEN, LINEMEN, WIREMEN AND LEARNERS. FOR STUDY OR REFERENCE.

The Best of Everything

THE NORTH-WESTERN LINE

THE through train service of the Chicago & North-Western Railway from Chicago to Omaha, Denver and the Pacific Coast on the west, the Black Hills and Dakotas to the northwest and to Milwaukee, Madison, St. Paul, Minneapolis and Duluth on the north, is as nearly perfect as modern and skillful management can make it.

The Overland Limited, a magnificent electric-lighted train, less than three days Chicago to San Francisco, daily.

The Colorado Special, only two nights to Denver from the Atlantic seaboard. Solid train Chicago to Denver.

The North-Western Limited, an electric lighted daily train between Chicago, St. Paul and Minneapolis.

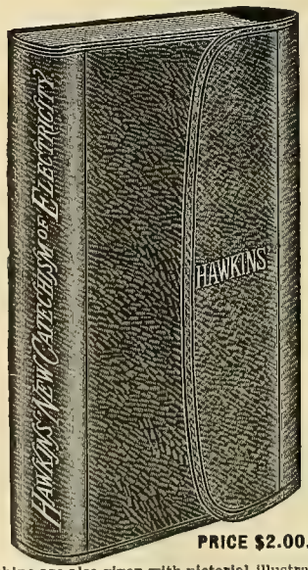
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

CROSS SECTION OF CORE AND COILS.

Efficient use is made of every inch of space and a most liberal use of copper is made possible in type A Transformers by the above construction.

TYPE A REGULATION

The shell type transformer constructed as is the "Wood" Type A, with interspersed primary and secondary windings is THEORETICALLY capable of giving closer regulation than any other standard commercial design.

Type A Transformers maintain an average regulation of two per cent. from no load to full load and preserve equal voltages on both sides of three-wire circuit with maximum unbalanced conditions.

ELECTRA CARBONS

ELECTRA TRADE MARK

UNEQUALED IN
QUALITY AND EFFICIENCY.
PRODUCE EXCELLENT, UNIFORM,
STEADY AND BRILLIANT LIGHT.

HUGO REISINGER 11 BROADWAY, NEW YORK.

There are no Carbons better than the "Electra" and none "just as good."

WITH THE KNOCK OF THE POSTMAN

comes a

TECHNICAL EDUCATION

of the Highest Quality to your very door.

Instruction by correspondence in the following subjects: **Mechanical, Electrical, Civil, Marine, Locomotive, Stationary and Sanitary Engineering, Navigation, Hydraulics, Architecture, Telegraphy, Sheet Metal Work, Mechanical and Perspective Drawing.** Also forty short special courses.

Instruction under Members of the Faculty of the Armour Institute of Technology.
Textile Course Under Foremost Authorities.

Young men not having the means to spend four years at college can begin their education in the American School of Correspondence, and later complete their courses by actual residence at the Armour Institute of Technology, as all work satisfactorily passed by students will be accepted by the Armour Institute. An exceptional opportunity to round out practical work with a course under teachers of recognized educational standing, who have at their command the equipment of a great resident technical school for testing and experimental work.

A Technical Reference Library (ten volumes) included with each full engineering course. Full particulars and a catalogue of courses may be had upon request. State subjects interested in.

AMERICAN SCHOOL OF CORRESPONDENCE
AT
ARMOUR INSTITUTE OF TECHNOLOGY.
CHICAGO, ILL.

THE POCKET VOLT AND AMMETERS

of the WHITNEY make are thoroughly accurate and reliable. They are built with powerful permanent magnets, jewel bearings, and have equally divided scales. Telephone battery and signal inspectors find them invaluable. You should not be without them.

THE
TAYLOR CHEMICAL CO.

PENN YAN, N. Y.

Capital Stock, - $500,000. Par Value, - -$10.00 Per Share.

Officers: Edward R. Taylor, Penn Yan, N. Y. Edward J. Hutchinson, Cincinnati, O., V.-Pres. C. A. Taylor, Penn Yan, N. Y., Sec. and Treas.

More than three million pounds of goods made by a new electrical process. Fully demonstrated and a complete success. Manufacture of many chemicals placed on an entirely new basis. Fully protected by patents. See Electrical World and Engineer of Dec. 21, 1901, page 1028; Electrical Review of Feb. 1st, 1902, pages 143-4-5, and Harpers Weekly, May 17, page 641. The U. S. Census Bulletin, No. 210, June 25th, page 58, says: "One of the most ingenious as also one of the most recent chemical applications of electricity." Good chance to get in on the ground floor of an industry that is sure to have a large future. Long established business. Present rate of production insures an 8 per cent. dividend from the start. Limited amount of stock for sale. For particulars apply to

EDWARD R. TAYLOR, Penn Yan, N. Y.

FOR DAMP PLACES

WHEELED. WHEELLESS.

Villard Automatic Wheeled and Wheelless Conduit Rods
Are Coupled and Uncoupled Instantly and with Ease.

Furnished with and without wheels, as desired. They will not buckle or form a zig-zag line, and, with wheels, friction is removed, making them very light running. They are perfectly rigid when pushed and become flexible when pulled. The rods cannot become uncoupled by any means in the ducts. The rear end of the rod has to be raised to an angle of about 45 degrees to uncouple it. One man can push with ease 600 feet, and a hard blow can be struck with telling effect without the slightest injury to the rods. The wheels serve as duct cleaners as well as to remove friction. The castings are of bronze with wheels of chilled cast iron. The rods are made of hickory, well seasoned in oil to prevent decay. Prices and circulars on application.

ANNOUNCEMENT

"THE STERRETT" OIL PUMP
IS NOW READY FOR THE MARKET.

In making this announcement we believe that we are calling the attention of the entire engineering field, and all places where oils of any degree are handled and transferred from barrel to tank and for general use, to an article that every engineer has long looked for and regularly called upon his oil dealer to supply, particularly so when cold weather has made the handling of his valve oils difficult and almost impossible with the pumps heretofore at his command.

"THE STERRETT"

pump is guaranteed to pump any article that is in a liquid form, and handles heavy valve oils as easily as ordinary pumps will kerosene. It is made of seamless brass tubing and durable in every part. There is no leakage of oil, which makes it the cleanest pump to use ever placed on the market.

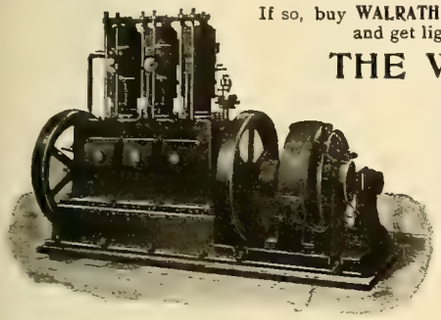
Ask your dealer for it or send direct to us. Money refunded if not satisfactory after 30 days' trial. Descriptive circulars on request. **PRICE, $3.50.**

Manufactured by

STERRETT PUMP COMPANY,

NO. 69 EAST SIXTH ST., ST. PAUL, MINN.

ARE YOU LOOKING FOR MONEY?



If so, buy WALRATH GAS OR GASOLINE ENGINES and get light on the subject.

THE WALRATH

Received the Highest Award at the Pan-American Exposition.

It will produce as good a commercial light as that of an automatic steam engine, either belted or direct connected generator. Simple, Economical and Reliable. Send for Catalogue W.

From Electrician to Chief Engineer.

The correspondence method is the only method for the man with little spare time to improve his prospects, and of correspondence methods, the I. C. S. is the best. At the time of enrolling I was employed as electrician at the Indiana State Prison; but, as a result of my I. C. S. training, I have been promoted to the position of chief engineer, my salary has been increased 68%, and my hours of work shortened. R. E. CROCKETT, Michigan City, Ind.

We have hundreds of indorsements just as strong and convincing as the foregoing. You owe it to yourself to find out just what we can do for ***you.*** Our advice has put many a man on the road to progress and prosperity. You should ask it at once.

*Name*_____ *St. and No.* _____

*City*_____ *State* _____

NOTICE IS HEREBY GIVEN, that the Common Council of the city of Superior, Wis., with a view to granting a franchise, has caused to be prepared and has by resolution adopted full specifications containing rules and regulations for the construction, maintenance and operation of a plant for the distribution of electric currents throughout said city, for the purpose of supplying said city and the inhabitants thereof with electricity for power, heat and lighting purposes, and for the conduct of such business.

Said specifications contain, among other things, the maximum rates which may be charged by the grantee of such franchise to patrons or consumers and for annual statements, sworn to by the manager and treasurer of the company operating under such franchise to be made to the Common Council of the gross receipts of the business carried on under such franchise. Said specifications are on file and of record in the office of the city clerk of said city.

Request is hereby made that proposals be submitted stating what percentage of the gross receipts from the business carried on under the franchise the bidder will pay annually into the treasury of said city in consideration of receiving a franchise according to said specifications.

Each person presenting a bid shall accompany such bid with a certified check of some national bank of the United States in the sum of one thousand dollars ($1,000), payable to the order of the treasurer of the city of Superior, Wis., as a guarantee of the acceptance of the franchise, if such bid is accepted and a franchise granted in accordance with the specifications and the laws of the state of Wisconsin, and for the giving of a bond in the sum of one thousand dollars ($1,000), as in said specifications provided.

Sealed bids will be received for a franchise to be granted according to said specifications, said bids to be opened at a meeting of the Common Council of said city, to be held November 18, 1902.

This advertisement is made pursuant to directions contained in a resolution of said Common Council passed at a meeting thereof held in the council chamber in the city of Superior, Wis., on October 14, 1902. Said resolution was approved by the mayor October 16, 1902.

Dated at Superior, Wis., this 18th day of October, 1902. JOHN A. HOBE,
Clerk of the City of Superior, Wis.

A Prosperous State.

The whole great empire of California is rapidly developing. It was long said of this sunny and attractive region that "man cannot live upon climate," but when it was seen that Southern California had something more substantial than sunshine to offer, cities rose like exhalations, and deserts became fruitful fields. The same discovery is being made in Northern and Central California. The climate is seen to be a unit throughout the state, and industrial opportunities are seen to go with the climate, and business advantages with the winterless skies.

San Francisco's trade has nearly doubled in the past few years, and her foreign tonnage since 1895 has been multiplied by fifteen. Banks and savings banks show an enormous increase in commercial deposits and in the savings of the people, while a glance at the records of the building trades shows everywhere immense activity. There are no indications of a local or temporary boom. The growth of irrigation and the multiplication of farms; the discovery of oil and its widening use as fuel in mines and manufactories, and on engines and steamers; the enlarging markets for California products in China, Japan, Hawaii and the Philippines, and the increasing trade with the west coast of Central and South America and with Australia, is sufficient to show that the prosperity of the state has a natural and healthful root.

Settlers' rates, based upon a $33 fare from Chicago, during September and October, are bringing in a host of home-seekers. This is a daily rate, and particulars may be had at any agency of the Southern Pacific. With the best climate, from the fewest acres, with the least labor, California will yield a wider range of harvest, and pay larger profits, and more dividends in comfort, than any land in the world.

The Franklin Dynamo
50 Watts. 10 Volts, 5 Amperes.

3,000 to 4,000 revolutions. Sets of material, finished parts, complete machines. For amateur construction—very efficient. Will drive a dental engine, sewing machine or small lathe; run as a generator, will furnish current for six 8 candle-power lamps. Parts $3 50, 86, 88.50. Complete $12.50. Write for circular 16.

We have been awarded the contract for the construction of an electric light plant at Lebanon, Tenn.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.
This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 510 pp. 380 illustrations. Price $3.00.
This is the first complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E. Dobbs. 106 pp. Price $1.00.
A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 269 illustrations. Price $1.00.
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs. 134 pp. Price 75 cents.
A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo, 48 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $4.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pp. 23 illustrations. Price $1.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pp. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Work Published, Sent on Receipt of Price.

PRACTICAL FEATURES OF TELEPHONE WORK.

By A. E. DOBBS.

Cloth, 7 by 5 1-4 Inches. Illustrated. 134 pages. Appendix. 75 Cents.

THIS work is designed as a simple, plain-speaking handbook for the practical telephone man. Its author, Mr. Dobbs, has been eminently fitted by fourteen years' experience in telephony to deal with the subject in a thoroughly competent manner. This he has done, and the result is a mine of information, clearly and concisely presented, and invaluable to the manager, operator and lineman alike. The appendix contains reliable data regarding wires, resistance, inductive capacity, etc.

This or any other book on telephony or electricity sent to any address, postpaid, on receipt of price.

Voltmeters, Millivoltmeters, Voltammeters, Ammeters, Milliammeters, Ground Detectors and Circuit Testers, Ohmmeters, Portable Galvanometers.

Weston Standard Portable Direct Reading Millivoltmeter.

Our Portable Instruments are recognized as The Standard the world over. The Semi-Portable Laboratory Standards are still better.
Our Station Voltmeters and Ammeters are unsurpassed in point of extreme accuracy and lowest consumption of energy.
Mention the WESTERN ELECTRICIAN when writing for catalogues.

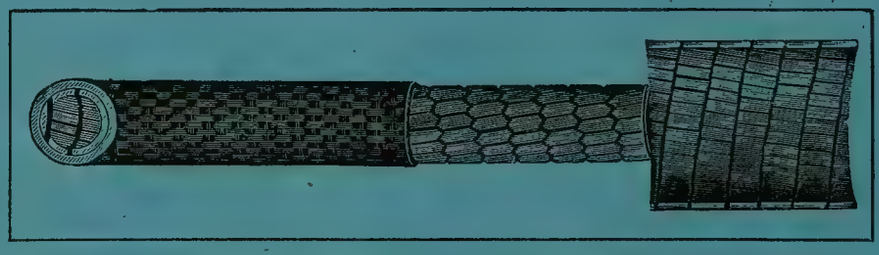
FLEXDUCT

For Interior Wiring
The Superior Product

The interior of "Flexduct" remains intact under all circumstances because it is an inseparable part of the conduit.



Here are some of the advantages of "Flexduct."

The interior cannot be ripped out, because it is an inseparable part of the conduit—no possibility of ripping out the inside when installing wires too large for the conduit or when fishing wires through it.

With part of the interior of a conduit gone, and the insulating properties seriously impaired, the installation cannot possibly meet the requirements of first-class work.

When "Flexduct" is used, every foot is absolutely intact and uninjured.

"Flexduct" is positively moisture-proof—made so by closely weaving together a special fibre with a special warp and by treating the conduit with a special compound to fill up the pores.

Send for booklet—also a sample of "Flexduct," and carefully examine its smooth interior; its longitudinal interweaving; test its strength, and satisfy yourself that "Flexduct" is the best flexible conduit that has ever been manufactured for interior wiring.

Osburn Flexible Conduit Co.,

General Sales Offices, 21 Park Row, New York City.

THE ELECTRIC STORAGE BATTERY CO.

PHILADELPHIA.

MANUFACTURER OF THE "Chloride Accumulator"

For Central Stations, Electric Railways, Isolated Lighting and Power Stations, Fire Alarm, Telegraph, Train Lighting, etc., etc.

Price Lists and Descriptive Bulletins forwarded upon request

ELECTRICAL EXPERIMENTS

BY W. J. CLARKE.

This is a practical, up-to-date, elementary book for the boy or student interested in electricity, and fills a long felt want. It tells in plain language how to make and experiment with Batteries, Magnets, Telegraph, Telephone, Electric Bells, Induction Coils, X Rays, *Wireless Telegraphy*, Dynamos and Motors.

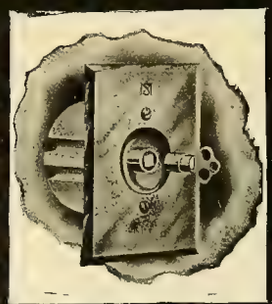
146 Pages. 129 Ills. Cloth. PRICE, $1.00.

Sent postage paid, on receipt of price.

ELECTRICIAN PUBLISHING CO.,

510 MARQUETTE BLDG., CHICAGO.

"A little nonsense now and then, Is relished by the wisest men."



The Flush Switch has no reference to my lady's false locks. It is always the same color—black top (handle), and white bottom. It has more snap than a black cat on a cold night—and more lives.

Used face to face with salesmen of "other" switches, breaks currents of "hot air" instantaneously. double its rated capacity.

Contacts guaranteed 18 Kt.. soft brass, and bronze that costs more than it should.

The plate is straight front, edges cut on the bias. In place it sticks closer than a miser to money, but comes off when desired, like water from a duck's back.

Please Mention Western Electrician.

MARSHALL-SANDERS CO.

BOSTON, MASS.

The Best of Everything

THE NORTH-WESTERN LINE

THE through train service of the Chicago & North-Western Railway from Chicago to Omaha, Denver and the Pacific Coast on the west, the Black Hills and Dakotas to the northwest and to Milwaukee, Madison, St. Paul, Minneapolis and Duluth on the north, is as nearly perfect as modern and skillful management can make it.

The Overland Limited, a magnificent electric-lighted train, less than three days Chicago to San Francisco, daily.

The Colorado Special, only two nights to Denver from the Atlantic seaboard. Solid train Chicago to Denver.

The North-Western Limited, an electric lighted daily train between Chicago, St. Paul and Minneapolis.

DAM!

That is what every user of water-power wants and very few have. Most dams leak. "The Gravity Dam" is the name of a 78-page book on dam construction. It describes all kinds of dams that leak and break and tells why they leak and break. It also describes a dam that will neither leak, break nor wash out.

THIS BOOK SENT FREE OF CHARGE

To every present or prospective user of water-power who sends his address and five cents in stamps to pay postage.

BEARDSLEY GRAVITY DAM & CONSTRUCTION CO.,
Dam Builders and Hydraulic Engineers, Etc. ELKHART, INDIANA.

EDWARDS AND CO.

The R. E.-A. L. Monitor Bell.
(Patented.)

Hammer rod supported in two places and thrown straight out and in by the armature, striking gong on inside, near edge, thus giving a full, clear tone.

All springs made of Phosphor Bronze and so formed that there is least possible strain.

Contacts are platinized, adjustment is made by pressure on the standard which supports one contact. No screws or nuts being used in the adjustment, bell does not get out of order by operation.

Ordinarily the weak point is the pivot, the unreliable one the adjusting screw and nut. As these defects have been eliminated, this bell will stand hard usage and operate under adverse conditions.

The hammer entirely concealed by gong and cannot be tampered with.

It is especially adapted for use on street cars, as in addition to the advantages mentioned, it is dust, insect and moisture proof.

Officers: Edward R. Taylor, Penn Yan, N. Y. Edward J. Hutchinson, Cincinnati, O., V.-Pres. C. A. Taylor, Penn Yan, N. Y., Sec. and Treas.

More than three million pounds of goods made by a new electrical process. Fully demonstrated and a complete success. Manufacture of many chemicals placed on an entirely new basis. Fully protected by patents. See Electrical World and Engineer of Dec. 21, 1901, page 1028; Electrical Review of Feb. 1st, 1902, pages 143-4-5, and Harpers Weekly, May 17, page 641. The U. S. Census Bulletin, No. 210, June 25th, page 58, says: "One of the most ingenious as also one of the most recent chemical applications of electricity." Good chance to get in on the ground floor of an industry that is sure to have a large future. Long established business. Present rate of production insures an 8 per cent. dividend from the start. Limited amount of stock for sale. For particulars apply to

SCHUREMAN & HAYDEN,

140 S. Clinton St., Chicago.

NOTICE IS HEREBY GIVEN, that the Common Council of the city of Superior, Wis., with a view to granting a franchise, has caused to be prepared and has by resolution adopted full specifications containing rules and regulations for the construction, maintenance and operation of a plant for the distribution of electric currents throughout said city, for the purpose of supplying said city and the inhabitants thereof with electricity for power, heat and lighting purposes, and for the conduct of such business.

Said specifications contain, among other things, the maximum rates which may be charged by the grantee of such franchise to patrons or consumers and for annual statements, sworn to by the manager and treasurer of the company operating under such franchise to be made to the Common Council of the gross receipts of the business carried on under such franchise. Said specifications are on file and of record in the office of the city clerk of said city.

Request is hereby made that proposals be submitted stating what percentage of the gross receipts from the business carried on under the franchise the bidder will pay annually into the treasury of said city in consideration of receiving a franchise according to said specifications.

Each person presenting a bid shall accompany such bid with a certified check of some national bank of the United States in the sum of one thousand dollars ($1,000), payable to the order of the treasurer of the city of Superior, Wis., as a guarantee of the acceptance of the franchise, if such bid is accepted and a franchise granted in accordance with the specifications and the laws of the state of Wisconsin, and for the giving of a bond in the sum of one thousand dollars ($1,000), as in said specifications provided.

Sealed bids will be received for a franchise to be granted according to said specifications, said bids to be opened at a meeting of the Common Council of said city, to be held November 18, 1902.

This advertisement is made pursuant to directions contained in a resolution of said Common Council passed at a meeting thereof held in the council chamber in the city of Superior, Wis., on October 14, 1902. Said resolution was approved by the mayor October 16, 1902.

Dated at Superior, Wis., this 18th day of October, 1902. JOHN A. HOBE,
Clerk of the City of Superior, Wis.

ANNOUNCEMENT

"THE STERRETT" OIL PUMP

IS NOW READY FOR THE MARKET.

In making this announcement we believe that we are calling the attention of the entire engineering field, and all places where oils of any degree are handled and transferred from barrel to tank and for general use, to an article that every engineer has long looked for and regularly called upon his oil dealer to supply, particularly so when cold weather has made the handling of his valve oils difficult and almost impossible with the pumps heretofore at his command.

"THE STERRETT"

pump is guaranteed to pump any article that is in a liquid form, and handles heavy valve oils as easily as ordinary pumps will kerosene. It is made of seamless brass tubing and durable in every part. There is no leakage of oil, which makes it the cleanest pump to use ever placed on the market.

Ask your dealer for it or send direct to us. Money refunded if not satisfactory after 30 days' trial. Descriptive circulars on request. **PRICE, $3.50.**

Manufactured by

STERRETT PUMP COMPANY,

NO. 69 EAST SIXTH ST., ST. PAUL, MINN.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.

This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 510 pp. 580 illustrations. Price $3.00.

This is the first complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E. Dobbs. 106 pp. Price $1.00.

A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 269 illustrations. Price $1.00.

Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on this subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.

In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs. 134 pp. Price 75 cents.

A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo, 48 pp. Price 25 cents.

This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $4.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pp. 23 illustrations. Price $1.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pp. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Work Published, Sent on Receipt of Price.

PRACTICAL FEATURES OF TELEPHONE WORK.

By A. E. DOBBS.

Cloth, 7 by 5 1-4 Inches. Illustrated. 134 pages. Appendix. 75 Cents.

THIS work is designed as a simple, plain-speaking handbook for the practical telephone man. Its author, Mr. Dobbs, has been eminently fitted by fourteen years' experience in telephony to deal with the subject in a thoroughly competent manner. This he has done, and the result is a mine of information, clearly and concisely presented, and invaluable to the manager, operator and lineman alike. The appendix contains reliable data regarding wires, resistance, inductive capacity, etc.

XXXIV.—Automatic Exchanges. XXXV.—Storage Batteries. XXXVI.—Specifications.

518 large octavo pages, 379 Illus. Price, $3.00.

This is the first complete treatise on Telephony in the English language. The author was peculiarly qualified for the task, having been an examiner in the U. S. Patent Office in the telephonic class, and subsequently as a telephone engineer had a wide experience in every branch of telephonic work. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

Copies of this or any other electrical book published sent prepaid, to any address in the world, on receipt of price.

ELECTRICITY MADE SIMPLE.
233 Pages. 108 Illustrations. **By CLARK CARYL HASKINS.** Cloth $1.00. Paper .50.

A BOOK DEVOID OF TECHNICALITIES—SIMPLE, PLAIN AND UNDERSTANDABLE.

There are many elementary books about electricity upon the market, but this is the first one presenting the matter in such shape that the layman may understand it, and, at the same time, not written in a childish manner.

This little work is not intended for the instruction of experts, nor as a guide for professors. The author has endeavored to bring the matter down to the level of those whose opportunities for gaining information on the branches treated have been limited.

Four chapters are devoted to Static Electricity; three each to Chemical Batteries and Light and Power; two each to Terrestrial Magnetism and Electro-Magnetism; one each to Atmospheric Electricity; Lightning Rods; Electro-Chemistry; Applied Electro-Magnetism; Force, Work and Energy; Practical Application of Ohm's Law; also a chapter upon Methods of Developing Electricity, other than Chemical.

The large number of examples that are given to illustrate the practical application of elementary principles is gaining for it a reputation as a text book for schools and colleges.

AMHERST, WIS., Sept. 27, 1902

Fort Wayne Electric Works,
Fort Wayne, Ind.

Gentlemen:-

Replying to your favor regarding our recent experience with your Type A transformers, would say on the night of July 13th, one sixty light transformer was struck by a lightning discharge and the cover broken in two parts, one part falling to the ground. On discovering this we thought the transformer was destroyed and did not attempt to replace the blown fuses. On taking it down the following day, we were surprised on examining the coils that they did not seem burned or damaged in any way, and after a test in the station which showed O.K. we replaced the broken cover and this transformer has been in constant service ever since. Enclosed find photograph which we had taken at the request of your Chicago representative, we remain,

Yours truly
B. E. Dwinell & Co.

THE TAYLOR CHEMICAL CO.

PENN YAN, N. Y.

Capital Stock, - $500,000. Par Value, - -$10.00 Per Share.

Officers: Edward R. Taylor, Penn Yan, N. Y. Edward J. Hutchinson, Cincinnati, O., V.-Pres. C. A. Taylor, Penn Yan, N. Y., Sec. and Treas.

More than three million pounds of goods made by a new electrical process. Fully demonstrated and a complete success. Manufacture of many chemicals placed on an entirely new basis. Fully protected by patents. See Electrical World and Engineer of Dec. 21, 1901, page 1028; Electrical Review of Feb. 1st, 1902, pages 143-4-5, and Harpers Weekly, May 17, page 641. The U. S. Census Bulletin, No. 210, June 25th, page 58, says: "One of the most ingenious as also one of the most recent chemical applications of electricity." Good chance to get in on the ground floor of an industry that is sure to have a large future. Long established business. Present rate of production insures an 8 per cent. dividend from the start. Limited amount of stock for sale. For particulars apply to

HYLO LAMPS

ON A METER RATE EDUCATE PEOPLE

TO USE MORE CURRENT.

HOW?

Teaches People to Turn Lamps Down Instead of Out — See?

Profitable Points for Central Station Men.

If you sell light on flat rate, why don't you push the **HYLO** lamp and save current? You could afford to furnish it *free*. You certainly cannot afford to refuse to *sell* it.

If you are selling current on meter you need the **HYLO** for this reason: one baby filament will not start your meters, and you will make the customer a present of ten watts now and then. But are you letting this *one fault* (of the meter) outshine all the advantages of the **HYLO**? A meter too slow to catch 10 watts will be very likely to miss one 8 c. p. lamp or be altogether too slow if it moves at all. Therefore, it is much better to give a customer a 10-watt lamp all night, and no more, than to take the chance of giving him 25 or 30 watts. We insist that you will *gain* on the item of meter slip by using **HYLO**s.

Besides, we are advertising so heavily all over the world that your customers will eventually get the **HYLO** *anyway*, and you had better score a point and provide it for them.

WITH THE KNOCK OF THE POSTMAN

comes a

TECHNICAL EDUCATION

of the Highest Quality to your very door.

Instruction by correspondence in the following subjects: **Mechanical, Electrical, Civil, Marine, Locomotive, Stationary and Sanitary Engineering, Navigation, Hydraulics, Architecture, Telegraphy, Sheet Metal Work, Mechanical and Perspective Drawing.** Also forty short special courses.

Instruction under Members of the Faculty of the Armour Institute of Technology.
Textile Course Under Foremost Authorities.

Young men not having the means to spend four years at college can begin their education in the American School of Correspondence, and later complete their courses by actual residence at the Armour Institute of Technology, as all work satisfactorily passed by students will be accepted by the Armour Institute. An exceptional opportunity to round out practical work with a course under teachers of recognized educational standing, who have at their command the equipment of a great resident technical school for testing and experimental work.

A Technical Reference Library (ten volumes) included with each full engineering course. Full particulars and a catalogue of courses may be had upon request. State subjects interested in.

WHAT USERS THINK

No. 1661.

"We have used in the past two years fifteen or twenty thousand of the Packard Lamps and find that they have given perfect satisfaction. In the meanwhile we have used various other makes and have found that they in no way compare with your lamp. In fact we cannot sell any other lamp but Packard in our business."

No. 561.

"We have used quite a variety of lamps under many varying conditions and we have no hesitation in saying that we have found the Packard one of the best in efficiency, long life and holding up its candle-power, the three necessary requisites of a good lamp."

So it goes, no matter what the conditions or difficulties to be overcome

PACKARD LAMPS

give the service, give the absolute satisfaction desired, give the absolute satisfaction we guarantee.

The large number of telephone exchange managers and employes will find this book a great help in locating telephone troubles and remedies therefor. Considerable new matter has been added in this edition.

Sent prepaid on receipt of price by the

Electrician Publishing Co., 510 Marquette Building, CHICAGO.

THE TELEPHONE HAND-BOOK

NEW AND REVISED EDITION, WITH A NEW CHAPTER ON "RECENT PROGRESS," BRINGING THE BOOK UP TO DATE.

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

160 Pages, 133 Illustrations, Cloth, Hand-Book Size, Price $1.00.

Extract from Preface.—"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.

CHAPTER 13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.

CHAPTER 28. Metallic Circuit.
29. Underground Wires
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony.
42. Recent Progress. Appendix.

Published and for sale by ELECTRICIAN PUBLISHING CO., 510 Marquette Building, Chicago

Fort Wayne Electric Works,
Fort Wayne, Ind.

Gentlemen:-

Replying to your favor regarding our recent experience with your Type A transformers, would say on the night of July 13th, one sixty light transformer was struck by a lightning discharge and the cover broken in two parts, one part falling to the ground. On discovering this we thought the transformer was destroyed and did not attempt to replace the blown fuses. On taking it down the following day, we were surprised on examining the coils, that they did not seem burned or damaged in any way, and after a test in the station which showed O.K. we replaced the broken cover and this transformer has been in constant service ever since. Enclosed find photograph which we had taken at the request of your Chicago representative, we remain,

Yours truly
E. E. Dwinell & Co.

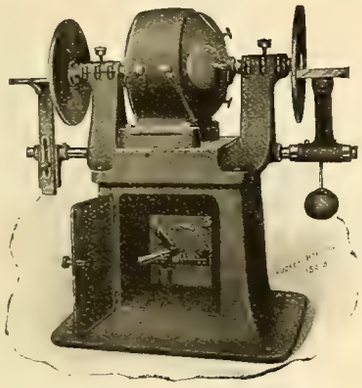
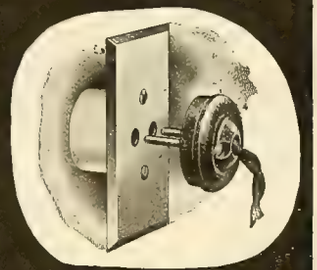
CROCKER-WHEELER COMPANY AMPERE, N.J., U.S.A.



An increase of efficiency and machine output is a result of motor drive.

"Einfacheit"

This Rosette Plug Receptacle is a bit the simplest thing we ever produced. Funny, but it took a lot of complicated thinking to design it. Easy enough after you "see how," as Columbus said about balancing the egg.



M.-S. ROSETTE PLUG AND RECEPTACLE.

It is perfectly flush without the plug, and with plug connected, makes a neat rosette finish to the plate.

Wired from the front. Goes in standard conduit boxes, or a 1⅜-inch round hole.

It is economical in price. Mailed sample, 80c.

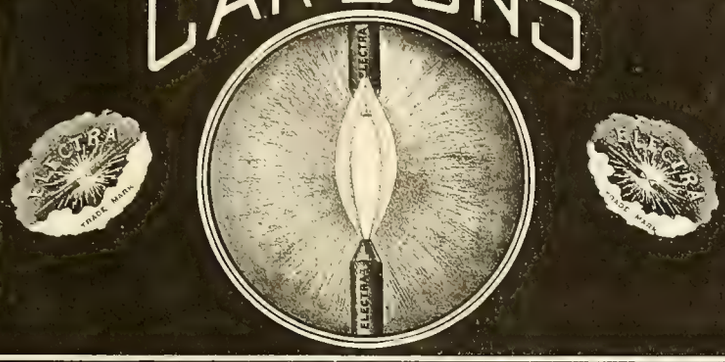
"ELECTRA" FLAME LIGHT CARBONS

MARVELOUS EFFECT

"ELECTRA" Flame Light Carbons are suitable for all types of Open Arc Lamps, either direct or alternating current, with slight change in regulation of lamp.



HIGHEST INTENSITY

The intensity and brilliancy of light is three times that of regular "ELECTRA," and five times that of other carbons, making them eminently suitable for all special lighting purposes.

DAM!

That is what every user of water-power wants and very few have. Most dams leak. "The Gravity Dam" is the name of a 78-page book on Dam construction. It describes all kinds of dams that leak and break and tells why they leak and break. It also describes a dam that will neither leak, break nor wash out.

THIS BOOK SENT FREE OF CHARGE

To every present or prospective user of water-power who sends his address and five cents in stamps to pay postage.

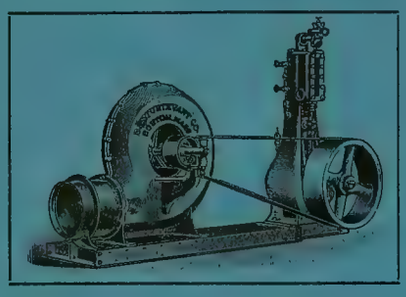
STURTEVANT

BLOWERS

ARE BUILT IN ENDLESS VARIETY



HIGH PRESSURE BLOWERS FOR

Cupola Furnaces and Forges are capable of producing pressures up to 16 ounces per square inch The shells are of cast iron, the shafts of high-grade steel, carefully finished, and the wheels of thin galvanized steel mounted on extra strong arms and accurately balanced. The great length and special oiling features of the journal boxes render them practically non-heatable. They can be arranged on adjustable beds so that belts can be tightened while running

FIBRE-GRAPHITE COMMUTATOR BRUSH NOISELESS SELF-LUBRICATING

There's No Friction

with the Fibre-Graphite Commutator Brush. Being 90 per cent. pure graphite, it insures low resistance, no sparking under a varying load, and longer wear. There is no greasing required. The Fibre-Graphite is therefore the most economic brush on the market. Send for price list.

CARBONS
CONSUMERS CARBON CO.
LANCASTER, OHIO, U. S. A.
Carbons of all kinds and for all purposes.

"Things are not always what they seem"

—Phædrus.

The M.S. Key Socket for example, except for the finer finish of the shell, looks much like an ordinary product, but when you get beneath the "skin," the shrewd buyer will see the difference that comes of automatic production and exact steel gauges.

The porcelain body is as sharp and exact as a piece of tooled metal. The action shows the stuff the spring is made of. The copper screw shell makes a sure contact.

A sample shows other dividend paying qualities.

Interstate Independent Telephone CONVENTION

Auditorium Hotel, Chicago,

DECEMBER 9, 10, 11, 1902.

Officers of the association expect this to be the largest convention of Independent telephone men ever held, from 1,200 to 1,500 delegates being expected to attend.

The Western Electrician of December 6th will be distributed at the meeting. The issue of December 13th will contain a full report of the proceedings.

If you wish to increase your business with the Independent Telephone companies you will find it greatly to your advantage to be largely represented in the advertising columns of these two important numbers.

Send in your order NOW.

MAIN BUILDING, ARMOUR INSTITUTE OF TECHNOLOGY.

CORRESPONDENCE COURSES IN

Engineering

Electrical, Mechanical, Locomotive, Stationary, Marine, Sanitary Engineering, Navigation, Architecture, Mechanical and Perspective Drawing, Sheet Metal Work, Textile Manufacturing, Telephone, Telegraphy; also forty short special engineering courses.

INSTRUCTION UNDER MEMBERS OF THE FACULTY OF ARMOUR INSTITUTE OF TECHNOLOGY.

All students are under the instruction of the men who preside over the laboratories and teach the classes of the Armour Institute of Technology. All work, therefore, will receive full credit toward resident work at the Armour Institute should the student at any time continue his studies there.

FOR EXAMPLE: Parts 1-6 of the work on Mechanical Drawing mastered under these auspices will be accepted as entrance preparation on that subject to the College of Engineering.

As a help in their studies, students in full engineering courses are furnished a Technical Reference Library (in 10 volumes) in addition to the regular instruction papers.

Full Particulars and Catalogue may be had upon request. State Course in which you are interested and present occupation.

GOOD SERVICE

Has given the citizens of Louisville great confidence in the Home Telephone Company. This could not have been gained by using ordinary apparatus, for the Bell Company only recently changed over their system to a modern multiple relay, lamp-signal board. The switchboard and telephones used by the Home Company were built by the Stromberg-Carlson Telephone Manufacturing Co. The switchboard is known as a full bridged multiple relay lamp line signal Central Energy type. The exchange is in every particular the most complete, up-to-date and modern installation in the Independent field. The switchboard is composed of 25 three-operator position sections.

Louisville, Ky., 12,600 lines capacity, 6,000 lines installed. In operation June 22, 1902.

DRY CELL.

If kept out of the sun, in a cool dry place this cell will not run down on the shelf in two years, and at the end of that time will be as good as other makes fresh from the factory. To maintain its superiority to all others, no expense is spared, and only the best materials and chemicals are used in its manufacture.

This cell will save the consumer money, because a fewer number will perform a given amount of work four times as long as any other cell of equal size.

VISITORS

TO THE

Interstate Telephone Convention

TO BE HELD AT THE

Auditorium Hotel, December 9, 10 and 11

Are cordially invited to inspect the

NEW BUILDING

OF THE

KELLOGG SWITCHBOARD AND SUPPLY COMPANY

The largest, most modern and best equipped Independent telephone factory in the world.

The newest of the five buildings of the Kellogg Telephone Plant.

The Kellogg Switchboard and Supply Company's factory is equipped to meet the heaviest demands for every detail of telephone and switchboard construction.—And is meeting them.

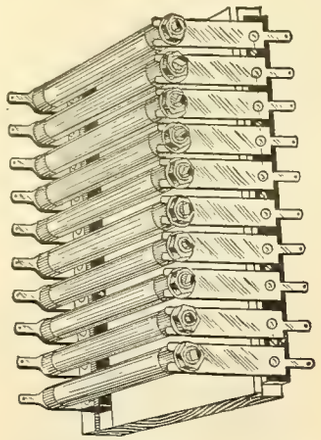
Convention visitors will be personally conducted over the factory, and will be enabled to inspect large and small switchboards in all stages of construction, as well as all the other manifold accessories of telephone supply, from the giant switchboard to portable desk telephones.

KELLOGG

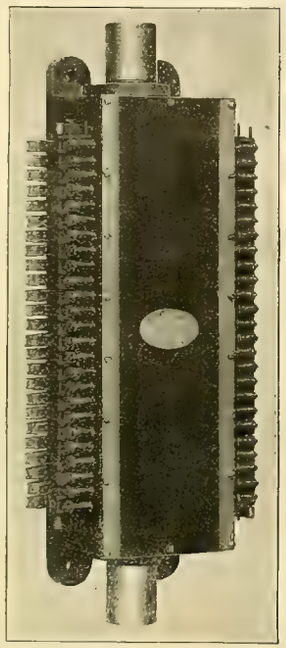
SWITCHBOARD & SUPPLY CO. CHICAGO.

346 Broadway, New York. Electric Building, Cleveland. Keystone Telephone Building, Philadelphia.

COOK PROTECTORS STANDARD



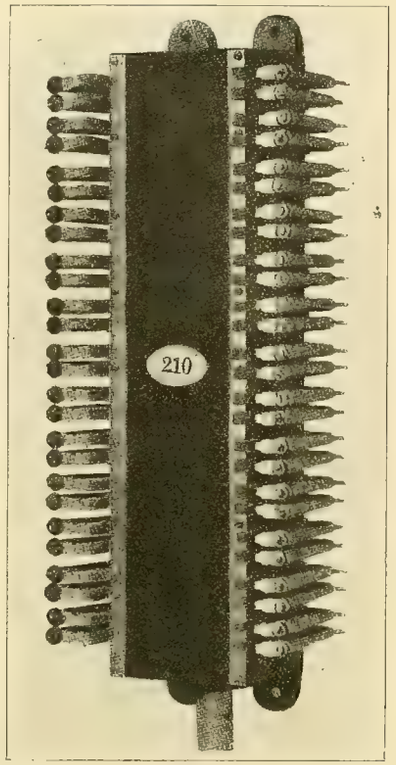
Type F—Cook Tubular Line Fuses mounted on strips. Any number of pairs. Patented Oct. 21, 1902.



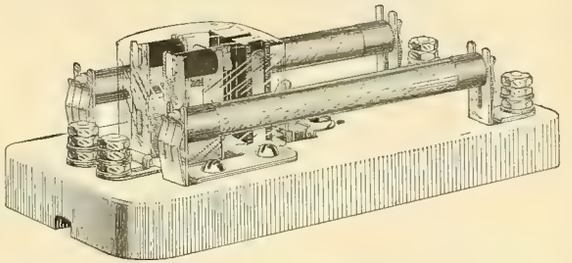
Type J.—Cook Combined Cable Terminal and Protectors, with heat coil and carbon plate arrester for strong and sneak currents. Patented May 20, 1890; July 8, 1902; Aug. 12, 1902; Aug. 12, 1902. All sizes, 25 to 200 pairs.

All apparatus broadly covered by United States Letters Patent.

Don't buy trouble. There is enough without buying more.



Type N.—Cook Pole Cable Terminal with Line Fuse and Carcon Plate Arrester. Patented May 20, 1890; Oct. 21, 1902. Other patents pending. All sizes, 25 to 100 pairs.

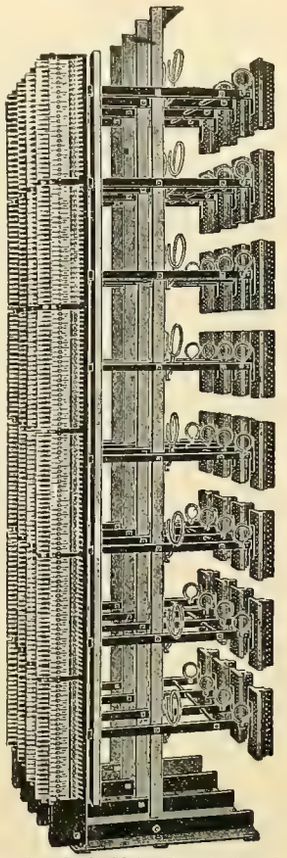


Type AA.—Cook No 12 Strong and Sneak Current Protector for subscriber's station, with carbon plate, heat coil and tubular line fuse. Patented May 20, 1890; July 8, 1902; Aug. 12, 1902; Oct. 21, 1902. Other patents pending.

IMPORTANT

Absolute protection guaranteed both as to foreign currents and liability to patent infringement.

No exchange equipment modern and up-to-date without this line of apparatus.



Type L.—Cook Main Distributing Iron Frame with Strong and Sneak Current Protectors. Patented May 20, 1890; July 8, 1902; Aug. 12, 1902; Aug. 12, 1902. Other patents pending. All sizes. Any capacity.

"Things are not always what they seem"

—Phædrus

The M Key Socket for example, except for the finer finish of the shell, looks much like an ordinary product, but when you get beneath the "skin," the shrewd buyer will see the difference that comes of automatic production and exact steel gauges.

The porcelain body is as sharp and exact as a piece of tooled metal. The action shows the stuff the spring is made of. The copper screw shell makes a sure contact.

A sample shows other dividend paying qualities.

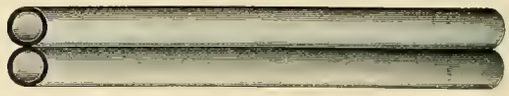
SOLE OWNERS OF THE MAXSTADT PATENT NO. 655,905.

We manufacture our joints under the **patent** we advertise.

PATENTED AUGUST 14, 1900, IN THE UNITED STATES AND FOREIGN COUNTRIES.



No. 882.

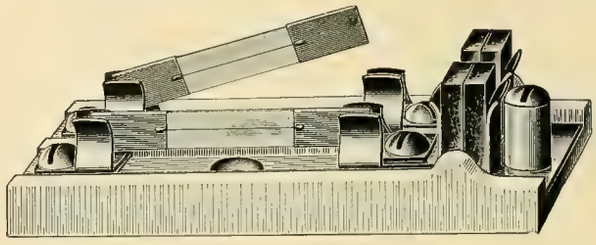
The illustration, No. 882, represents the Maxstadt patent improved American Joint, ready for use. Made in copper and tinned steel, for copper and galvanized iron wire. This joint is absolutely perfect and costs less money than any other joint on the market. Our Tinned Steel Joints are especially adapted for iron wire, and give entire satisfaction wherever used.

Prices and samples on application.

SOLE MANUFACTURERS OF THE

MAXSTADT PATENT IMPROVED FUSIBLE CUT-OUT CARBON LIGHTNING ARRESTERS.

No. 416 represents a full size Maxstadt Patent Improved Double Pole Porcelain Cut-Out and Carbon Lightning Arrester. The object of this Arrester is to economize space. Its compactness and efficiency has made it the most practical combination cut-out and lightning arrester on the market to-day, and it costs less money than any other arrester made.



Patented March 31, 1891. No. 416.

The above is one of the many different styles of Maxstadt Fuse Blocks we manufacture. We can also furnish fuses, paper sleeves, fuse wire and links.

Write for prices and samples.

WHEELED. WHEELESS.

Villard Automatic Wheeled and Wheelless Conduit Rods

Are Coupled and Uncoupled Instantly and with Ease.

Furnished with and without wheels, as desired. They will not buckle or form a zig-zag line, and, with wheels, friction is removed, making them very light running. They are perfectly rigid when pushed, and become flexible when pulled. The rods cannot become uncoupled by any means in the ducts. The rear end of the rod has to be raised to an angle of about 45 degrees to uncouple it. One man can push with ease 600 feet, and a hard blow can be struck with telling effect without the slightest injury to the rods. The wheels serve as duct cleaners as well as to remove friction. The castings are of bronze with wheels of chilled cast iron. The rods are made of hickory, well seasoned in oil to prevent decay. Prices and circulars on application.

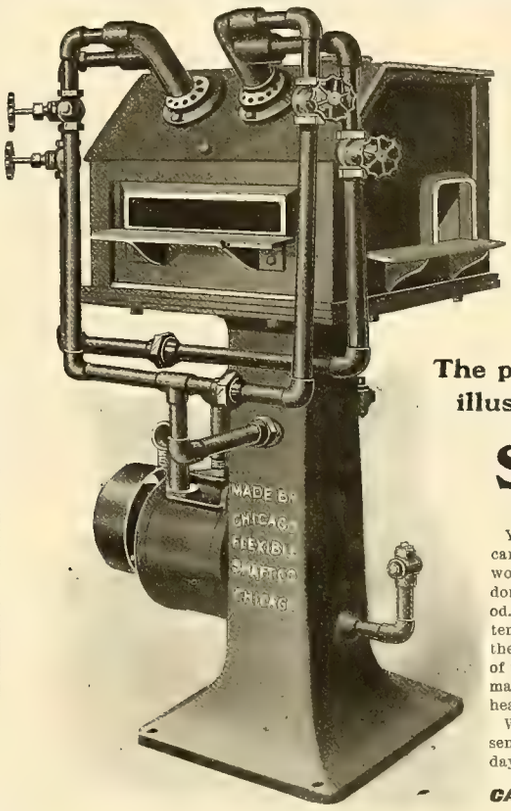
HEAT YOUR MAGNETS RIGHT.



ONE THOUSAND MAGNETS

10x½x¾ can be heated for hardening in this furnace in ten hours; every one perfect.—Thousands of magnets are ruined by the old method.

The price of furnace illustrated here is

$100.

You take no chances, you cannot go wrong, you do more work in one day than can be done in three by the old method. If your magnets are not tempered right don't blame the steel man, it's the fault of the heating. Thousands of magnets are ruined by being heated in the open fire.

We make several sizes, and send our furnaces on thirty days' trial.

THE

Western Electrician

OF DECEMBER 13TH, 1902

Will contain the report of the Interstate Independent Telephone Convention which will be held in Chicago December 9th-11th. This meeting promises to be the largest ever held among telephone men and consequently the above number of the Western Electrician will prove of special interest to everyone engaged in telephone work.

Manufacturers and dealers desiring to increase their trade with the telephone exchanges of the world should be largely represented in the advertising columns of this important issue.

Orders and copy should reach us by December 10th.

Western Electrician,

510 MARQUETTE BUILDING, CHICAGO.

American Telephone Practice

By KEMPSTER B. MILLER, M. E.

CONTENTS.

CHAPTER I — History and Principles of the Magneto Telephone. II.—History and Principles of the Battery Transmitter. III.—The Telephone Receiver. IV.—Carbon Transmitters. V. — Induction Coils. VI.—Batteries. VII.—Calling Apparatus. VIII.—The Automatic Shunt. IX.—The Hook Switch, and Circuits of a Telephone. X.—Commercial Calling Apparatus. XI.—The Telephone Relay or Repeater. XII.—Self-Induction and Capacity. XIII.—Telephone Lines. XIV.—Simple Switchboards for Small Exchanges. XV.—Listening and Ringing Apparatus for Switchboards. XVI.—Self-Restoring Switchboard Drops. XVII.—Complete Switchboards for Small Exchanges. XVIII.—Lamp Signal Switchboards. XIX.—The Multiple Switchboard. XX.—Transfer Systems. XXI.—Common-Battery Systems. XXII.—House Systems. XXIII.—Protective Devices. XXIV.—Distributing Boards. XXV.—Party Lines Non-Selective. XXVI.—Party Lines. Step by Step Selective Signaling. XXVII.—Selective Signaling by Strength and Polarity. XXVIII.—Harmonic Systems of Selective Signaling. XXIX.—Wire for Telephone Use. XXX.—Pole Line Construction. XXXI.—Overhead Cable Construction. XXXII.—Underground Cable Construction. XXXIII.—Testing. XXXIV.—Automatic Exchanges. XXXV.—Storage Batteries. XXXVI.—Specifications.

518 large octavo pages, 379 Illus. Price, $3.00.

This is the first complete treatise on Telephony in the English language. The author was peculiarly qualified for the task, having been an examiner in the U. S. Patent Office in the telephonic class, and subsequently as a telephone engineer had a wide experience in every branch of telephonic work. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

Copies of this or any other electrical book published sent prepaid, to any address in the world, on receipt of price.

Electrician Publishing Co., 510 Marquette Building, CHICAGO, ILLINOIS.

RENEWALS

December is an important month for the renewal of subscriptions. If your subscription is expiring this month, or even if it is expiring in January, it is to your interest to send in your renewal now so that the subscription may be extended on our books in plenty of time to prevent your missing any copies.

To make a Christmas gift of the WESTERN ELECTRICIAN send us the name and address of the person to whom you wish to give the subscription, with the annual subscription price of $3, and the paper will be sent regularly for 52 weeks.

With January 1st will begin the thirty-second volume of the WESTERN ELECTRICIAN, and during 1903 it will complete its sixteenth and the first half of its seventeenth year, the paper having been founded July 2, 1887, and continued under the present management for this entire period. We offer the past as a guaranty of the future, and in addition pledge the best efforts of an experienced and competent staff to the constant improvement of the paper.

The WESTERN ELECTRICIAN is published for the purpose of assisting everyone interested in the art. It is a general electrical and scientific paper, and gives to its readers all the latest news and keeps them thoroughly informed of everything that is going on in all the different departments of the electrical and allied fields. Its technical and scientific articles cover all the latest inventions and improvements and keep the reader thoroughly informed of all that is new in the art. Its special articles, written by the most prominent authorities, as well as its general articles, are of the highest order, and no interested person can afford to be without the paper.

Western Electric Company

Chicago. Saint Louis. Philadelphia. New York.

When Napoleon decided to advance on Russia, it was his intention to make a dash through Moscow to St. Petersburg and run the town wide open.

Now, everybody in Boston, and many people in Chicago, know that he didn't reach St. Petersburg, but went way back to the place he started from and there took a rest.

The trouble was the contract was faulty—the Russians hadn't signed it; and the only signature was that big Napoleonic "N." Very artistic, but inefficient. Since then the Russians have been called unfriendly, and so they are unless they need you.

So would you like to see a picture of the Factory that will build the big telephone plants for St. Petersburg and Odessa for the Russian Government?

THIS IS IT.

The newest of the five buildings of the Kellogg Telephone Plant.

The Largest, Most Modern and Best Equipped Independent Telephone Factory in the World.

The Kellogg Switchboard and Supply Company's factory is equipped to meet the heaviest demands for every detail of telephone and switchboard construction.—And is meeting them.

KELLOGG

SWITCHBOARD & SUPPLY CO. CHICAGO.

346 Broadway, New York. Electric Building, Cleveland. Keystone Telephone Building, Philadelphia.

GROWTH OF

Stromberg-Carlson Tel. Mfg. Co.,

Since 1895.

Represents [2] stenographers, number required in 1900 to handle correspondence.

Represents [17] stenographers, number required in 1902 to handle correspondence.

Represents [12], number of employes in 1895.

Represents [1595], number of employes in 1902.

Represents amount of business done in 1895.

Represents amount of business for 1902.

WHY ?

Such phenomenal Growth in this day of competition is the point that should interest prospective telephone buyers. It certainly couldn't have taken place had we furnished cheap and inefficient apparatus.

Its an easy question to answer.

The best apparatus and confidence of our customers. The word "best" is used carelessly in many advertisements; but there is no other way of saying "best" when we mean best.

THE STANDARD FOR RUBBER INSULATION.

$6.57

IS THE MONEY SAVED IN 100 DAYS BY A

NERNST LAMP

IN THE

COMPARISON between three 16 Candle-power Incandescents (48 C. P.) and one Single Glower Nernst 50 Candle-power Lamp, burning six hours per day, at 14 cents per 1000 watt hours——

EXAMPLE.

Three 16 Candle-power Incandescent Lamps = 165 watts x 6 hours, = 990 watt hours, at 14 cent rate	$0.13.96 cts. per day.
One 50 Candle-power Nernst Lamp = 88 watts x 6 hours, = 528 watt hours, at 14 cent rate	0.07.39 cts. per day.
Saving	$0.06.57 cts. per day.

THEREFORE, AS THE PRICE OF A ONE GLOWER NERNST LAMP FOR EITHER A 110 OR A 220-VOLT ALTERNATING CIRCUIT IS ONLY

$6.00

WE ASK YOU IF YOU ARE NOT STANDING IN YOUR OWN LIGHT BY NOT THOROUGHLY INVESTIGATING THIS SUBJECT. WE ARE HERE TO ASSIST YOU WITH THIS PROBLEM.

RENEWALS

- GLOWERS. — 25 cts. each; life as above. Allowance for burnt-out parts, 2 cts. each.
- HEATER TUBES. — 75 cts. each; life 2,500 hours. Allowance for burnt-out parts, 17 cts. each.

BIG STOCK ON HAND.

BRANCHES: CHICAGO: 192 Desplaines St. BOSTON: 7 Otis St. SAN FRANCISCO: 33 Second St.

New Standard Specialties.

DRY CELL.

If kept out of the sun, in a cool dry place, this cell will not run down on the shelf in two years, and at the end of that time will be as good as other makes fresh from the factory. To maintain its superiority to all others, no expense is spared, and only the best materials and chemicals are used in its manufacture.

This cell will save the consumer money, because a fewer number will perform a given amount of work four times as long as any other cell of equal size.

ELECTROMOTIVE FORCE, 1.52 VOLTS.
CURRENT, - 14 TO 18 AMPERES.

..CATALOGUE FOR THE ASKING..

HOME SEARCHLIGHTS ALWAYS READY FOR INSTANT USE.

QUICK, SAFE, CHEAP.

By pushing button a steady, brilliant, strongly reflected electric light is obtained; illuminates the darkest corner instantly; handy at bedside, and in all cases of emergency. Takes the place of lamp or candle, without need of matches, or danger of fire. Will last for years. PRICE, PREPAID, $2.00. Extra batteries for recharging, 35c each. Send for booklet, with further information and illustrations of other electric household articles. Electric Cas Lighters, $1.50 each.

"Things are not always what they seem"
—Phædrus

The M-S Key Socket for example, except for the finer finish of the shell, looks much like an ordinary product, but when you get beneath the "skin," the shrewd buyer will see the difference that comes of automatic production and exact steel gauges.

The porcelain body is as sharp and exact as a piece of tooled metal. The action shows the stuff the spring is made of. The copper screw shell makes a sure contact.

A sample shows other dividend paying qualities.

THE CHICAGO DIE & ELECTRIC CO.
SOLE OWNERS OF THE MAXSTADT PATENT NO. 655,905.
We manufacture our joints under the patent we advertise.

PATENTED AUGUST 14, 1900, IN THE UNITED STATES AND FOREIGN COUNTRIES.

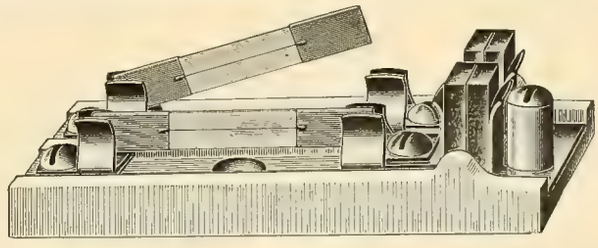
No. 882.

The illustration, No. 882, represents the Maxstadt patent improved American Joint, ready for use. Made in copper and tinned steel, for copper and galvanized iron wire. This joint is absolutely perfect and costs less money than any other joint on the market. Our Tinned Steel Joints are especially adapted for iron wire, and give entire satisfaction wherever used.

Prices and samples on application.

SOLE MANUFACTURERS OF THE
MAXSTADT PATENT IMPROVED FUSIBLE CUT-OUT CARBON LIGHTNING ARRESTERS.

No. 416 represents a full size Maxstadt Patent Improved Double Pole Porcelain Cut-Out and Carbon Lightning Arrester. The object of this Arrester is to economize space. Its compactness and efficiency has made it the most practical combination cut-out and lightning arrester on the market to-day, and it costs less money than any other arrester made.



Patented March 31, 1891. No. 416.

The above is one of the many different styles of Maxstadt Fuse Blocks we manufacture. We can also furnish fuses, paper sleeves, fuse wire and links.

Write for prices and samples.

We Manufacture a Large Percentage of the goods listed in our 600-page Catalog

We have sent the following Letter to the Local (Chicago) Members of the Electrical Supply Dealers' Association:

32 Courtlandt Street, NEW YORK. 188 Fifth Avenue, CHICAGO, ILL.

Office of

The Manhattan Electrical Supply Co.

CHICAGO, Dec. 4, 1902.

Gentlemen:—It is apparent that a well defined and systematic boycott against this Company exists among the local members of the Supply Dealers' Association; aided by some of the manufacturers. Against this we desire to protest. We believe it to be unjust, uncalled for and unbusiness like and calculated to force us to retaliatory measures.

We, therefore, desire to inform you that we cannot continue to work in harmony with you, in the matter of re-sale prices or Association rules, as to quantities or deliveries.

Respectfully.

MANHATTAN ELECTRICAL SUPPLY CO.

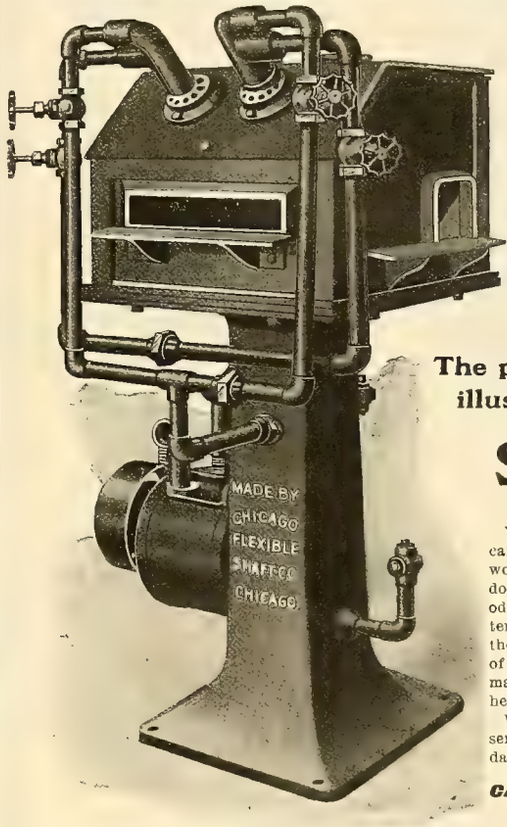
HEAT YOUR MAGNETS RIGHT.



ONE THOUSAND MAGNETS

10x½x¾ can be heated for hardening in this furnace in ten hours; every one perfect.—Thousands of magnets are ruined by the old method.

The price of furnace illustrated here is

$100.

You take no chances, you cannot go wrong, you do more work in one day than can be done in three by the old method. If your magnets are not tempered right don't blame the steel man, it's the fault of the heating. Thousands of magnets are ruined by being heated in the open fire.

We make several sizes, and send our furnaces on thirty days' trial.

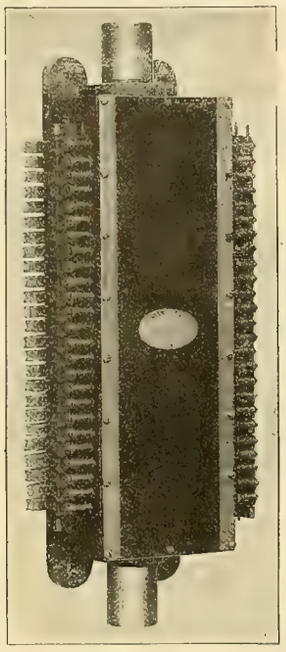
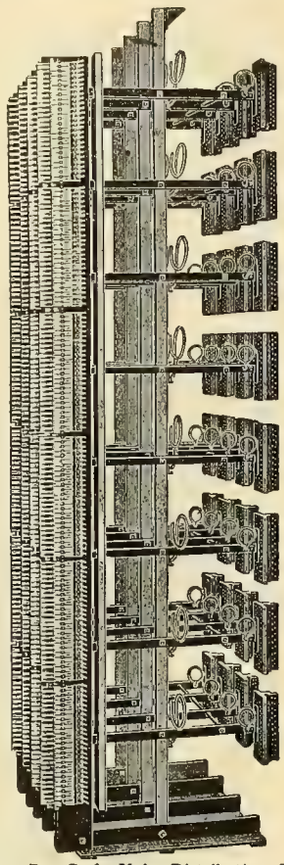
All Apparatus broadly covered by United States Letters Patent.

Don't buy trouble. There is enough without buying more.



Type J.—Cook Combined Cable Terminal and Protectors, with heat coil and carbon plate arrester for strong and sneak current. Patented May 20, 1890; July 8, 1902; Aug. 12, 1902; Aug. 12, 1902. All sizes, 25 to 200 pairs.

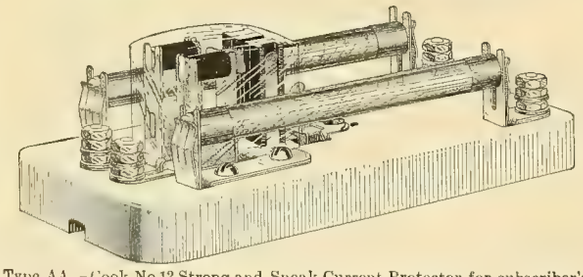


Type L.—Cook Main Distributing Iron Frame with Strong and Sneak Current Protectors. Patented May 20, 1890; July 8, 1902; Aug. 12, 1902; Aug. 12, 1902. Other patents pending. All sizes. Any capacity.

IMPORTANT.

Absolute Protection Guaranteed both as to Foreign currents and liability to patent infringement.

No exchange equipment modern and up-to-date without this line of apparatus.



Type AA.—Cook No 12 Strong and Sneak Current Protector for subscriber's station, with carbon plate, heat coil and tubular line fuse. Patented May 20, 1890; July 8, 1902; Aug. 12, 1902; Oct. 21, 1902. Other patents pending.

FRANK B. COOK,

MANUFACTURER OF

Combined Cable Terminals and Protectors, Lock-nut Cable Terminals, Pole Top Cable Terminals, Guy Clamps, Cable Hangers, Lightning Arresters, Strong Current Protectors, Sneak Current Protectors, Heat Coils, Line Fuses, Copper Test Connectors, Terminal Strips, Distributing Boards, Main or Intermediate.

Any Combinations of above mounted on Iron or Wood.

WESTERN REPRESENTATIVE.

The Inspector AND Trouble Man.

By A. E. DOBBS.

Full of information and diagrams for the operator, exchange owner, exchange manager, inspector, trouble man, lineman.

A complete description of telephones and their troubles. How to find and remedy them, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

This is a practical book, written in **plain language,** and for **anyone** interested in telephony.

Mailed anywhere on receipt of price . . . ONE DOLLAR.

No technicalities. Substantially bound in cloth.

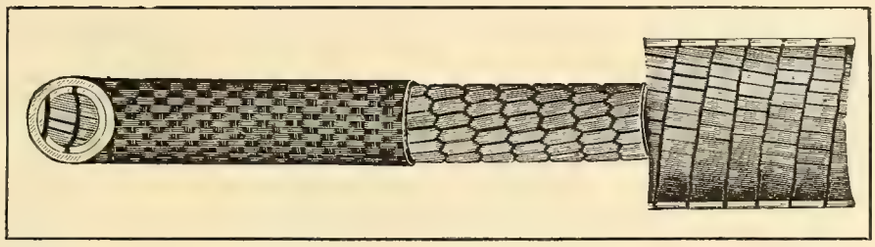
ELECTRICIAN PUBLISHING CO.,

510 MARQUETTE BUILDING, CHICAGO.

FLEXDUCT

For Interior Wiring
The Superior Product

The interior of "Flexduct" remains intact under all circumstances because it is an inseparable part of the conduit.



Here are some of the advantages of "Flexduct."

The interior cannot be ripped out, because it is an inseparable part of the conduit—no possibility of ripping out the inside when installing wires too large for the conduit or when fishing wires through it.

With part of the interior of a conduit gone, and the insulating properties seriously impaired, the installation cannot possibly meet the requirements of first-class work.

When "Flexduct" is used, every foot is absolutely intact and uninjured.

"Flexduct" is positively moisture-proof—made so by closely weaving together a special fibre with a special warp and by treating the conduit with a special compound to fill up the pores.

Send for booklet—also a sample of "Flexduct," and carefully examine its smooth interior; its longitudinal interweaving; test its strength, and satisfy yourself that "Flexduct" is the best flexible conduit that has ever been manufactured for interior wiring.

Osburn Flexible Conduit Co.,

General Sales Offices, 21 Park Row, New York City.

RENEWALS

December is an important month for the renewal of subscriptions. If your subscription is expiring this month, or even if it is expiring in January, it is to your interest to send in your renewal now so that the subscription may be extended on our books in plenty of time to prevent your missing any copies.

To make a Christmas gift of the WESTERN ELECTRICIAN send us the name and address of the person to whom you wish to give the subscription, with the annual subscription price of $3, and the paper will be sent regularly for 52 weeks.

With January 1st will begin the thirty-second volume of the WESTERN ELECTRICIAN, and during 1903 it will complete its sixteenth and the first half of its seventeenth year, the paper having been founded July 2, 1887, and continued under the present management for this entire period. We offer the past as a guaranty of the future, and in addition pledge the best efforts of an experienced and competent staff to the constant improvement of the paper.

The WESTERN ELECTRICIAN is published for the purpose of assisting everyone interested in the art. It is a general electrical and scientific paper, and gives to its readers all the latest news and keeps them thoroughly informed of everything that is going on in all the different departments of the electrical and allied fields. Its technical and scientific articles cover all the latest inventions and improvements and keep the reader thoroughly informed of all that is new in the art. Its special articles, written by the most prominent authorities, as well as its general articles, are of the highest order, and no interested person can afford to be without the paper.

THE COMING

NEW YEAR'S ISSUE

OF THE

Western Electrician

will be of exceptional interest and value to every electrical worker. As in previous New Years Numbers the carefully prepared statistics of electrical manufactures in the United States for the year 1902 will be a noteworthy feature of this number. To illustrate the correctness of the Western Electrician's estimates, it may be observed that the figures published in our New Year's issue of January 5, 1901, agreed substantially with the Government census statistics made public last August. This important issue will be an exceptionally choice one for advertisers. An attractive announcement would enable you to place the merits of your product before nearly every prospective buyer. To obtain a choice location and a striking advertisement we would urge you to send in your copy at the earliest possible moment.

THE COMING

NEW YEAR'S ISSUE

OF THE

Western Electrician

will be of exceptional interest and value to every electrical worker. As in previous New Years Numbers the carefully prepared statistics of electrical manufactures in the United States for the year 1902 will be a noteworthy feature of this number. To illustrate the correctness of the Western Electrician's estimates, it may be observed that the figures published in our New Year's issue of January 5, 1901, agreed substantially with the Government census statistics made public last August. This important issue will be an exceptionally choice one for advertisers. An attractive announcement would enable you to place the merits of your product before nearly every prospective buyer. To obtain a choice location and a striking advertisement we would urge you to send in your copy at the earliest possible moment.

WESTERN ELECTRICIAN, - 510 Marquette Bldg., CHICAGO.

Type C indicating fuse before blowing.

D. & W.

Type C indicating fuse after blowing.

BULL'S-EYE INDICATOR

An absolutely FLASHLESS device indicating the blown fuse instantly.

Watch the "TARGET" on the label of the fuse.

D. & W. FUSE COMPANY, PROVIDENCE, R. I.

MAIN BUILDING, ARMOUR INSTITUTE OF TECHNOLOGY.

ENGINEERING EDUCATION

BY CORRESPONDENCE

UNDER DIRECTION OF COLLEGE PROFESSORS.

The American School of Correspondence offers the following courses in

ENGINEERING.

Electrical, Mechanical, Stationary, Locomotive, Navigation, Architectural, Marine, Mechanical Drawing, Heating, Ventilating and Plumbing, Perspective Drawing, Sheet Metal Work, Cotton Spinning, Woolen and Worsted Spinning, Textile Design and Fabric Structure.

ALSO 49 SHORT SPECIAL ENGINEERING COURSES.

INSTRUCTION UNDER MEMBERS OF THE FACULTY OF ARMOUR INSTITUTE OF TECHNOLOGY.

Textile Manufacturing Under the Foremost Authorities.

All work in Engineering will receive full credit toward resident work at Armour Institute, should the student at any time continue his studies there.

FOR EXAMPLE: Parts 1 to 6 of the work on Mechanical Drawing, mastered under these auspices, will be accepted as entrance preparation on that subject to the College of Engineering.

As a help in their studies, students in full engineering courses are furnished a Technical Reference Library (in 10 volumes) in addition to the regular instruction papers.

"ELECTRA" FLAME LIGHT CARBONS

MARVELOUS EFFECT

"ELECTRA" Flame Light Carbons are suitable for all types of Open Arc Lamps, either direct or alternating current, with slight change in regulation of lamp.

HIGHEST INTENSITY

The intensity and brilliancy of light is three times that of regular "ELECTRA," and five times that of other carbons, making them eminently suitable for all special lighting purposes.

WESTERN ELECTRICIAN'S

MOONLIGHT SCHEDULE

FOR 1903.

TEN CENTS A COPY.

Electrician Publishing Co.,

510 MARQUETTE BUILDING,

CHICAGO.

"The Recognized Authority on Wiring and Construction."

The universally adopted National Electrical Code explained and illustrated in this year's edition of the hand-book.

STANDARD WIRING

For Electric Light and Power.

By H. C. CUSHING, Jr., A. I. E. E., Electrical Engineer and Inspector.

ADOPTED

By the Fire Underwriters of the United States.
By Cornell University, Stanford University and other Technical Colleges and Schools.
By over 27,000 Electrical Engineers, Central Station Managers and Wiremen.

BECAUSE

It is the only book on Wiring and Construction kept strictly up to date.
It contains all the necessary Tables, Rules, Formulas and Illustrations.
It settles disputes, and if referred to before wiring will prevent disputes.

Flexible Leather Cover (pocket size), $1.00.

Sent post paid upon receipt of price, by

ELECTRICIAN PUBLISHING CO.,
510 Marquette Building, - - CHICAGO, ILL.

ELECTRICITY MADE SIMPLE.

233 Pages. 108 Illustrations. **By CLARK CARYL HASKINS.** Cloth $1.00. Paper .50.

A BOOK DEVOID OF TECHNICALITIES—SIMPLE, PLAIN AND UNDERSTANDABLE.

There are many elementary books about electricity upon the market, but this is the first one presenting the matter in such shape that the layman may understand it, and, at the same time, not written in a childish manner.

This little work is not intended for the instruction of experts, nor as a guide for professors. The author has endeavored to bring the matter down to the level of those whose opportunities for gaining information on the branches treated have been limited.

Four chapters are devoted to Static Electricity; three each to Chemical Batteries and Light and Power; two each to Terrestrial Magnetism and Electro-Magnetism; one each to Atmospheric Electricity; Lightning Rods; Electro-Chemistry; Applied Electro-Magnetism; Force, Work and Energy; Practical Application of Ohm's Law; also a chapter upon Methods of Developing Electricity, other than Chemical.

The large number of examples that are given to illustrate the practical application of elementary principles is gaining for it a reputation as a text-book for schools and colleges.

FOR ENGINEERS, DYNAMO MEN, FIREMEN, LINEMEN, WIREMEN AND LEARNERS. FOR STUDY OR REFERENCE.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

RENEWALS

December is an important month for the renewal of subscriptions. If your subscription is expiring this month, or even if it is expiring in January, it is to your interest to send in your renewal now so that the subscription may be extended on our books in plenty of time to prevent your missing any copies.

To make a Christmas gift of the WESTERN ELECTRICIAN send us the name and address of the person to whom you wish to give the subscription, with the annual subscription price of $3, and the paper will be sent regularly for 52 weeks.

With January 1st will begin the thirty-second volume of the WESTERN ELECTRICIAN, and during 1903 it will complete its sixteenth and the first half of its seventeenth year, the paper having been founded July 2, 1887, and continued under the present management for this entire period. We offer the past as a guaranty of the future, and in addition pledge the best efforts of an experienced and competent staff to the constant improvement of the paper.

The WESTERN ELECTRICIAN is published for the purpose of assisting everyone interested in the art. It is a general electrical and scientific paper, and gives to its readers all the latest news and keeps them thoroughly informed of everything that is going on in all the different departments of the electrical and allied fields. Its technical and scientific articles cover all the latest inventions and improvements and keep the reader thoroughly informed of all that is new in the art. Its special articles, written by the most prominent authorities, as well as its general articles, are of the highest order, and no interested person can afford to be without the paper.

Cross Section of Type N Transformer.

Transformers

Westinghouse Type N and O. D. Transformers show practically no difference of Temperature as measured by a thermometer placed between the coils, or as measured in the copper by the resistance method.

This is actual proof of Uniform Temperature.

For illustrated Transformer Booklet address nearest sales office of the

Westinghouse Electric & Mfg. Co.

Sales Offices in all Large Cities. Pittsburg, Pa.

Nernst Lamps

Operative on all Alternating Circuits

This illustration was reproduced from a photograph of a Men's Furnishing Goods Store, taken while illuminated by two 6-Glower Nernst Lamps.

The Light is the same as Daylight.
Shows the True Color of Fabrics.
Fifty per cent more economical than Incandescents.

Ask your nearest Supply Dealer, or write for Booklet No. 6 to nearest office of

Nernst Lamp Co.

General Office, Pittsburgh, Pa.

Christensen Engineering Company,

MILWAUKEE.

THE COMING

NEW YEAR'S ISSUE

OF THE

Western Electrician

will be of exceptional interest and value to every electrical worker. As in previous New Years Numbers the carefully prepared statistics of electrical manufactures in the United States for the year 1902 will be a noteworthy feature of this number. To illustrate the correctness of the Western Electrician's estimates, it may be observed that the figures published in our New Year's issue of January 5, 1901, agreed substantially with the Government census statistics made public last August. This important issue will be an exceptionally choice one for advertisers. An attractive announcement would enable you to place the merits of your product before nearly every prospective buyer. To obtain a choice location and a striking advertisement we would urge you to send in your copy at the earliest possible moment.

Manhattan Electrical Supply Co.

BOYCOTT

DEAR READER:

In Chicago and vicinity this company is experiencing some inconvenience in filling orders promptly, owing to the boycott against us, for withdrawing from the Supply Dealers' Association.

Two concerns in particular are taking advantage of the situation. One, the *Bryant-Perkins Co.*, which makes a specialty of electric light supplies, will only sell us at "retail prices" from their Chicago stock.

The other concern, which is owned by the *Bell Telephone Co.*, operating under the name of *Western Electric Co.*, also turns us down, and will sell to us at "retail prices" only. *Rather a small game on their part, don't you think?*

We expect to be doing business at the old stand for some time to come, and ask users of electrical apparatus if a little independence, and our refusal to be squeezed by that OCTOPUS OF A CORPORATION which has been squeezing everybody in their telephone business, doesn't merit approval and support?

In order to keep up the interest, we are revising our prices, and our 560-page Catalogue and discount sheet will interest you both as to goods and prices.

We would like to hear from you.

Western Electric Company

New York
Philadelphia

United States Patents for Weston Electrical Measuring Instruments Sustained.

In the final hearing in a suit in equity, after submission of full proofs and arguments on both sides, Judge Coxe, of the United States Circuit Court, Southern District of New York, holds that the KEYSTONE ELECTRICAL INSTRUMENT COMPANY, of Philadelphia, has infringed certain patents of the WESTON ELECTRICAL INSTRUMENT COMPANY by its manufacture and sale of certain electrical measuring instruments, and awards a decree for perpetual injunction and for an accounting of the profits and damages.

The purpose of this notice is to call the attention of dealers and users of electrical measuring instruments sharply to the fact, that these patents of the Weston Electrical Instrument Company have been sustained after long and expensive litigation; and that the rights of the Weston Electrical Instrument Company will be enforced against ALL who aid and abet the infringement by dealing in or by using Keystone or other instruments embodying the features covered by these broad patents.

Other suits are now being pressed to a hearing against the Keystone Company and their agents, the Cutter Co., and also against other makers. All who deal in or use instruments infringing these basic patents do so at their peril.

Copies of the opinion, which is a broad and sweeping one, may be had upon request to the undersigned. Pertinent excerpts therefrom follow:

"Many of the perplexities which usually beset patent causes are entirely absent here. We are enabled to "start with several fundamental propositions which cannot be successfully disputed.

"FIRST: Mr. Weston was the first to make a successful commercial voltmeter for measuring alternating "currents.

"SECOND: The device of the patent is small, simple, compact, easily operated and requires no preliminary "adjustment. It can be operated at any angle by an unskilled workmen, and will measure direct as well as "alternating currents.

"THIRD: Strictly speaking, there is no prior art. There were no instruments entitled to be considered "as anticipations. . . . .

"FOURTH: The invention is not disclosed in any prior patent or publication.

"FIFTH: Infringement is clear. The defendants have copied the patented instrument even in its minute "details. . . . . .

"Few patents that come before the courts are entitled to more liberal treatment. This is a case where, upon "the undisputed testimony, the inventor has accomplished something which has been of unquestioned benefit "to the electrical world.

"THE COMPLAINANT IS ENTITLED TO THE USUAL DECREE FOR AN INJUNCTION "AND AN ACCOUNTING."

RENEWALS

December is an important month for the renewal of subscriptions. If your subscription is expiring this month, or even if it is expiring in January, it is to your interest to send in your renewal now so that the subscription may be extended on our books in plenty of time to prevent your missing any copies.

To make a Christmas gift of the WESTERN ELECTRICIAN send us the name and address of the person to whom you wish to give the subscription, with the annual subscription price of $3, and the paper will be sent regularly for 52 weeks.

With January 1st will begin the thirty-second volume of the WESTERN ELECTRICIAN, and during 1903 it will complete its sixteenth and the first half of its seventeenth year, the paper having been founded July 2, 1887, and continued under the present management for this entire period. We offer the past as a guaranty of the future, and in addition pledge the best efforts of an experienced and competent staff to the constant improvement of the paper.

The WESTERN ELECTRICIAN is published for the purpose of assisting everyone interested in the art. It is a general electrical and scientific paper, and gives to its readers all the latest news and keeps them thoroughly informed of everything that is going on in all the different departments of the electrical and allied fields. Its technical and scientific articles cover all the latest inventions and improvements and keep the reader thoroughly informed of all that is new in the art. Its special articles, written by the most prominent authorities, as well as its general articles, are of the highest order, and no interested person can afford to be without the paper.

SOCKET ECONOMY

We invite the attention of Contractors using sockets to the economy of the M make. The linings, while easily removable with the fingers for re-finishing shells, never drop out. An economy of the wireman's time while connecting.

The binding screws are also so conveniently arranged and so nicely fitted that one contractor using large numbers reports a saving of from three to five dollars a thousand in connecting, owing chiefly to the perfection of these details, and the easy assembling of the caps and shells.

The mechanism is made by automatic machinery — which spells uniformity.

We are making a push button switch a little better than any heretofore offered. We make all flush and push plates to the standard size as authorized by the National Electrical Contractors' Association. Samples of switch upon request.

The Best of Everything

THE NORTH-WESTERN LINE

THE through train service of the Chicago & North-Western Railway from Chicago to Omaha, Denver and the Pacific Coast on the west, the Black Hills and Dakotas to the northwest and to Milwaukee, Madison, St. Paul, Minneapolis and Duluth on the north, is as nearly perfect as modern and skillful management can make it.

The Overland Limited, a magnificent electric-lighted train, less than three days Chicago to San Francisco, daily.

The Colorado Special, only two nights to Denver from the Atlantic seaboard. Solid train Chicago to Denver.

The North-Western Limited, an electric lighted daily train between Chicago, St. Paul and Minneapolis.

H. R. McCULLOUGH, 3d Vice-President. W. B. KNISKERN, Gen'l Pass'r and Tkt. Agt. CHICAGO, ILL.

EDWARDS AND CO

The R. E.-A. L. Monitor Bell.
(Patented.)

Hammer rod supported in two places and thrown straight out and in by the armature, striking gong on inside, near edge, thus giving a full, clear tone.

All springs made of Phosphor Bronze and so formed that there is least possible strain.

Contacts are platinized, adjustment is made by pressure on the standard which supports one contact. No screws or nuts being used in the adjustment, bell does not get out of order by operation.

Ordinarily the weak point is the pivot, the unreliable one the adjusting screw and nut. As these defects have been eliminated, this bell will stand hard usage and operate under adverse conditions.

The hammer entirely concealed by gong and cannot be tampered with.

It is especially adapted for use on street cars, as, in addition to the advantages mentioned, it is dust, insect and moisture proof.

ART CALENDAR

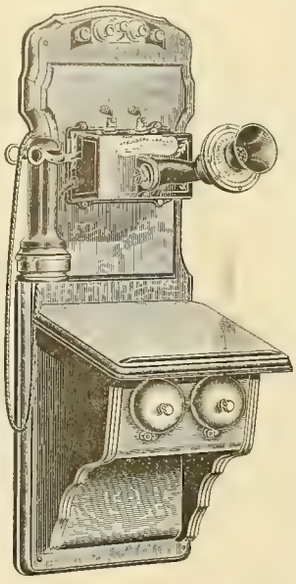
Four graceful poses from life; figures ten inches high, reproduced in colors. Highest example of lithographic art.

"THE ONLY WAY"

to own one of these beautiful calendars is to send twenty-five cents, with name of publication in which you read this advertisement, to GEO. J. CHARLTON, General Passenger Agent, Chicago & Alton Railway, 328 Monadnock Building, CHICAGO, ILL.

The best railway line between CHICAGO, ST. LOUIS, KANSAS CITY and PEORIA.

Stromberg-Carlson Telephones



embody superior points in design and construction. The prospective buyer will do well to remember the facts regarding same. The Stromberg-Carlson Telephone Mfg. Co. is the only manufacturer who has succeeded in keeping the same type of transmitter on the market for the past seven years, and their sales are to-day greater than nearly all the other makes combined. There is a reason for it. A trial will convince you why. Our guarantee is unquestionable.

Write us for prices and further information.

PRACTICAL FEATURES OF TELEPHONE WORK.

By A. E. DOBBS.

Cloth, 7 by 5 1-4 Inches. Illustrated. 134 pages. Appendix. 75 Cents.

THIS work is designed as a simple, plain-speaking handbook for the practical telephone man. Its author, Mr. Dobbs, has been eminently fitted by fourteen years' experience in telephony to deal with the subject in a thoroughly competent manner. This he has done, and the result is a mine of information, clearly and concisely presented, and invaluable to the manager, operator and lineman alike. The appendix contains reliable data regarding wires, resistance, inductive capacity, etc.

This or any other book on telephony or electricity sent to any address, postpaid, on receipt of price.

THE MOON TERMINAL HEAD FOR TELEPHONE CABLES,

AFFORDS COMPLETE PROTECTION.

THIS STATEMENT IS SUSTAINED BY ITS RECORD.

250,000 Line Wires Protected. No Recorded Loss From Moisture or High Potential Currents.

We desire to figure with you on the Cable Protection you will require. The reputation of this apparatus should secure your careful consideration. We furnish the Moon Fuse Pole Terminal with fuses and Metal Outer Case or Storm Box complete; or Terminals either with or without Fuse protection, as required, for the Exchange end of the Cable. They are simple in construction, easy to install and most economical to maintain.
We are pleased to answer any questions regarding this equipment, and to furnish you with catalogue and price list.

M'CORMICK TURBINE.
On Vertical or Horizontal Shaft.
Especially Adapted for Electrical Work.
Gives a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.
Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with us, as we are willing to guarantee results where others have failed, no matter what make of turbine has been in use.
